

Microsoft AZ-120 Customized Lab Simulation & Valid AZ-120 Exam Labs

2026 Latest ActualTestsIT AZ-120 PDF Dumps and AZ-120 Exam Engine Free Share: <https://drive.google.com/open?id=1z65C3bzEnpiWMo8n3F7IX4z6ytSqFWY>

You can take the online Microsoft AZ-120 practice exam multiple times. At the end of each attempt, you will get your progress report. By analyzing this report you can eliminate and overcome your mistakes. Microsoft AZ-120 real dumps increase your chances of passing the AZ-120 certification exam. A huge number of professionals got successful by using ActualTestsIT AZ-120 practice test material. In case you don't pass the Planning and Administering Microsoft Azure for SAP Workloads, AZ-120 test after using Microsoft AZ-120 pdf questions and practice tests, you can claim your refund. You can download a free demo of any AZ-120 exam dumps format and check the features before buying. Start Microsoft AZ-120 test preparation today and obtain the highest marks in the actual AZ-120 exam.

The Microsoft AZ-120 exam is suitable for individuals who have experience with Azure and SAP technologies. Candidates should have a good understanding of SAP applications and databases, as well as experience with Azure services such as virtual machines, storage, networking, and security. Planning and Administering Microsoft Azure for SAP Workloads certification is recommended for IT professionals who are involved in managing SAP workloads on Azure, including architects, engineers, administrators, and consultants. By obtaining the Microsoft AZ-120 Certification, individuals can demonstrate their expertise in planning and administering Azure solutions for SAP workloads, which can lead to career advancement and new job opportunities.

Valid AZ-120 Exam Labs | Reliable AZ-120 Test Objectives

The valid updated, and real Microsoft AZ-120 PDF questions and both practice test software are ready to download. Just take the best decision of your professional career and get registered in the Microsoft AZ-120 Certification Exam and start this journey with ActualTestsIT AZ-120 exam PDF dumps and practice test software.

Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q210-Q215):

NEW QUESTION # 210

You have an Azure subscription that contains the resources shown in the following table.

Name	Type
RG1	Resource group
VM1	Virtual machine
corpsoftware	Azure Storage account

You plan to deploy an SAP production landscape.

You create the following PowerShell Desired State Configuration (DSC) and publish the DSC configuration to corpsoftware.

```
Configuration JRE {  
  
    Import-DscResource -ModuleName xPSDesiredStateConfiguration  
    Package Installer  
    {  
        Ensure = 'Present'  
        Name = "Java 8"  
        Path = "\\File01\Software\jreinstall.exe"  
        Arguments = "/s REBOOT=0 SPONSERS=0 REMOVEOUTOFDATEJRES=1 INSTALL_SILENT=1 AUTO_UPDATE=0 EULA=0"  
        ProductId = "26A24AE4-039D-4CA4-B7B4-2F64180101F0"  
    }  
}
```

You need to deploy the DSC configuration to VM1.

How should you complete the command? To answer, select the appropriate options in the answer area NOTE:

Each correct selection is worth one point.

Set-AzVMExtension -ResourceGroupName RG1 -VMName VM1 -ArchiveStorageAccountName corpsoftware -ArchiveBlobName 'JREInstall.ps1.zip'

Set-AzVMExtension
Set-AzVMExtension
Set-AzVMExtension
Set-AzVMExtension
Set-AzVMExtension

-AutoUpdate -ConfigurationName JREInstall

Installer
Java 8
JRE
JREInstall

Answer:

Explanation:

Set-AzVMExtension -ResourceGroupName RG1 -VMName VM1 -ArchiveStorageAccountName corpsoftware -ArchiveBlobName 'JREInstall.ps1.zip'

Set-AzVMExtension
Set-AzVMExtension
Set-AzVMExtension
Set-AzVMExtension
Set-AzVMExtension

-AutoUpdate -ConfigurationName JREInstall

Installer
Java 8
JRE
JREInstall

Explanation

Set-AzVMExtension -ResourceGroupName RG1 -VMName VM1 -ArchiveStorageAccountName corpsoftware -ArchiveBlobName 'JREInstall.ps1.zip'

Set-AzVMExtension
Set-AzVMExtension
Set-AzVMExtension
Set-AzVMExtension
Set-AzVMExtension

-AutoUpdate -ConfigurationName JREInstall

NEW QUESTION # 211

You have an SAP Cloud Platform subscription and an Azure Active Directory (Azure AD) tenant.

You need to ensure that Azure AD users can access SAP Cloud App by using their Azure AD credentials.

What should you configure?

- A. A conditional access policy
- B. SAP Cloud Platform Identity Authentication
- C. Active Directory Domain Services (AD DS)
- D. SAP Cloud Connector

Answer: C

Explanation:

When you integrate SAP Cloud Platform Identity Authentication with Azure AD, you can:

Control in Azure AD who has access to SAP Cloud Platform Identity Authentication.

Enable your users to be automatically signed-in to SAP Cloud Platform Identity Authentication with their Azure AD accounts.

Manage your accounts in one central location - the Azure portal.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/saas-apps/sap-hana-cloud-platform-identity-authentication-tutorial>

NEW QUESTION # 212

You have an on-premises deployment of SAP HANA.

You plan to migrate the deployment to Azure.

You need to identify the following from the last six months:

The number of active users

The database performance

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

From:

SAP GUI

SAP Solution Manager

A SAP Solution Manager work center

Run the:

SAP Quick Sizer

Transaction ST06

SAP EarlyWatch report

Answer:

Explanation:

From:

- SAP GUI
- SAP Solution Manager
- A SAP Solution Manager work center

Run the:

- SAP Quick Sizer
- Transaction ST06
- SAP EarlyWatch report

NEW QUESTION # 213

You migrate SAP ERP Central Component (SAP ECC) production and non-production landscapes to Azure.

You are licensed for SAP Landscape Management (LaMa).

You need to refresh from the production landscape to the non-production landscape.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
From the Azure portal, create a service principal	
From the Cloud Managers tab in LaMa, add an adapter	
From SAP Solution Manager, deploy the LaMa adapter	
Add permissions to the service principal	
Install and configure LaMa on an SAP NetWeaver instance	

Answer:

Explanation:

Explanation:

Step 1: From the Azure portal, create a service principal

The Azure connector can use a Service Principal to authorize against Microsoft Azure. Follow these steps to create a Service Principal for SAP Landscape Management (LaMa).

Step 2: Add permissions to the service principal

The Service Principal does not have permissions to access your Azure resources by default. You need to give the Service Principal permissions to access them.

Step 3: From the Cloud Managers tab in LaMa, add an adapter

Create a new connector in SAP LaMa

Open the SAP LaMa website and navigate to Infrastructure. Go to tab Cloud Managers and click on Add.

Select the Microsoft Azure Cloud Adapter

Step 4: Install and configure LaMa on an SAP NetWeaver instance

Provision a new adaptive SAP system

You can manually deploy a new virtual machine or use one of the Azure templates in the quickstart repository. It contains templates for SAP NetWeaver ASCS, SAP NetWeaver application servers, and the database. You can also use these templates to provision new hosts as part of a system copy/clone etc.

Note: To support customers on their journey into a cloud model (hybrid or entirely public cloud), SAP and Microsoft partnered to create an adapter that integrates the SAP management capabilities of LaMa with the IaaS advantages of Microsoft Azure.

NEW QUESTION # 214

You are planning replication of the SAP HANA database for the disaster recovery environment in Azure. For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
You must use synchronous replication.	☐	☐
You must use delta data shipping for operation mode.	☐	☐
You must configure an Azure Directory (Azure AD) application to manage the failover.	☐	☐

Answer:

Explanation:

Statements	Yes	No
You must use synchronous replication.	☐	☒
You must use delta data shipping for operation mode.	☐	☒
You must configure an Azure Directory (Azure AD) application to manage the failover.	☒	☐

Explanation:

Statements	Yes	No
You must use synchronous replication.	☐	☒
You must use delta data shipping for operation mode.	☐	☒
You must configure an Azure Directory (Azure AD) application to manage the failover.	☒	☐

Box 1: No

SAP HANA Replication consists of one primary node and at least one secondary node. Changes to the data on the primary node are replicated to the secondary node synchronously or asynchronously.

Box 2: No

Since SPS11 SAP HANA system replication can be run in two different operation modes:
delta_datashipping

logreplay

Box 3: Yes
