Network Appliance NS0-528 Exam Syllabus Topics:

Topic	Details
Topic 1	NetApp ONTAP Business Continuity Solutions: This section of the exam measures the skills of Disaster Recovery Specialists and covers advanced business continuity technologies. This includes the configuration and operation of SnapMirror active sync for continuous data replication and the execution of SVM-DR (Storage Virtual Machine Disaster Recovery) operations to ensure high availability.
Topic 2	NetApp ONTAP Core Data Protection Features: This section of the exam measures the skills of Systems Administrators and validates core knowledge of data protection and redundancy within the ONTAP environment. It encompasses understanding how data efficiencies impact protection strategies and the practical knowledge required to deploy these data protection solutions effectively in a hybrid cloud infrastructure.
Topic 3	Data Protection Solutions: This section of the exam measures the skills of Storage Architects and covers the foundational principles of designing data protection solutions. It focuses on creating comprehensive design documentation, understanding the various components involved, and identifying all critical solution dependencies to ensure a robust and reliable data protection strategy.
Topic 4	NetApp Data Protection Software: This section of the exam measures the skills of DevOps Engineers and focuses on the deployment and administration of NetApp's proprietary data protection software. A key part of this domain involves applying these solutions to protect modern containerized applications running in Kubernetes environments.
Topic 5	Troubleshooting and Testing: This section of the exam measures the skills of Support Engineers and focuses on the practical skills needed to maintain data integrity. It involves troubleshooting common data protection configuration issues, executing well-defined Disaster Recovery (DR) procedures, and performing data restore operations to recover from data loss.

Network Appliance Implementation Engineer - Data Protection Exam Sample Questions (Q156-Q161):

NEW QUESTION # 156

You are performing a routine health check for a customer and need to determine if the disk shelf firmware is up to date. From My AutoSupport, which report would you use?

- A. Transition Advisor
- B. Event Viewer
- **C. Visualization**
- D. Upgrade Advisor

Answer: C

NEW QUESTION # 157

You want to use SnapCenter to restore an MS SQL database on iSCSI LUNs from a previous application-consistent snapshot. In this scenario, what is required to accomplish this task?

- A. Confirm that the iSCSI service is disabled on the host.
- B. Confirm multipathing for iSCSI is enabled on the host.
- **C. Confirm that the database server is running on the host.**
- D. Confirm that the database server is not running on the host.

Answer: C

NEW QUESTION # 158

Your customer wants to set up a local retention time of at least four months. They also want to protect a week of retention from being deleted by ransomware or rogue administrators.

Which two settings create the correct Snapshot policy to achieve this? (Choose two.)

- A. Create a Snapshot policy with the maximum daily snapshots set to 122.
- B. Set the SnapLock retention period for the daily Snapshot copies to 7 days.
- C. Enable Autonomous Ransomware Protection (ARP) on the volume.
- D. Create a Snapshot policy with the weekly Snapshot copy retention time set to 122 days.

Answer: B,D

Explanation:

To meet the requirement of 122 days $\approx$ 4 months, so setting the weekly Snapshot copy retention to 122 days ensures local backups are retained for that duration.

To protect a week of retention from tampering, apply SnapLock to the daily Snapshot copies with a 7-day retention, which makes them tamper-proof and resistant to deletion by ransomware or rogue administrators.

NEW QUESTION # 159

How can you ensure data integrity in a data protection solution?

- A. By implementing data validation checks
- B. By using data compression
- C. By using data redundancy
- D. By using data deduplication

Answer: A
