NEW QUESTION # 112

- A. 2001::12:1
- B. FF02:1
- C. FF:02:2E0:FCFF:FEEF:FEC
- D. FEE:FCFF:FEEF:FEC

Answer: A

NEW QUESTION # 113

As shown in the figure, if host A has the ARP cache of host B, host A can ping host B.

- A. FALSE
- B. TRUE

Answer: B

Explanation:

If host A already has host B's MAC address in its ARP cache, it can send packets directly to host B without needing to perform an ARP request. This cached information allows immediate packet delivery, assuming no network changes have occurred that would

invalidate the ARP entry.

NEW QUESTION # 114

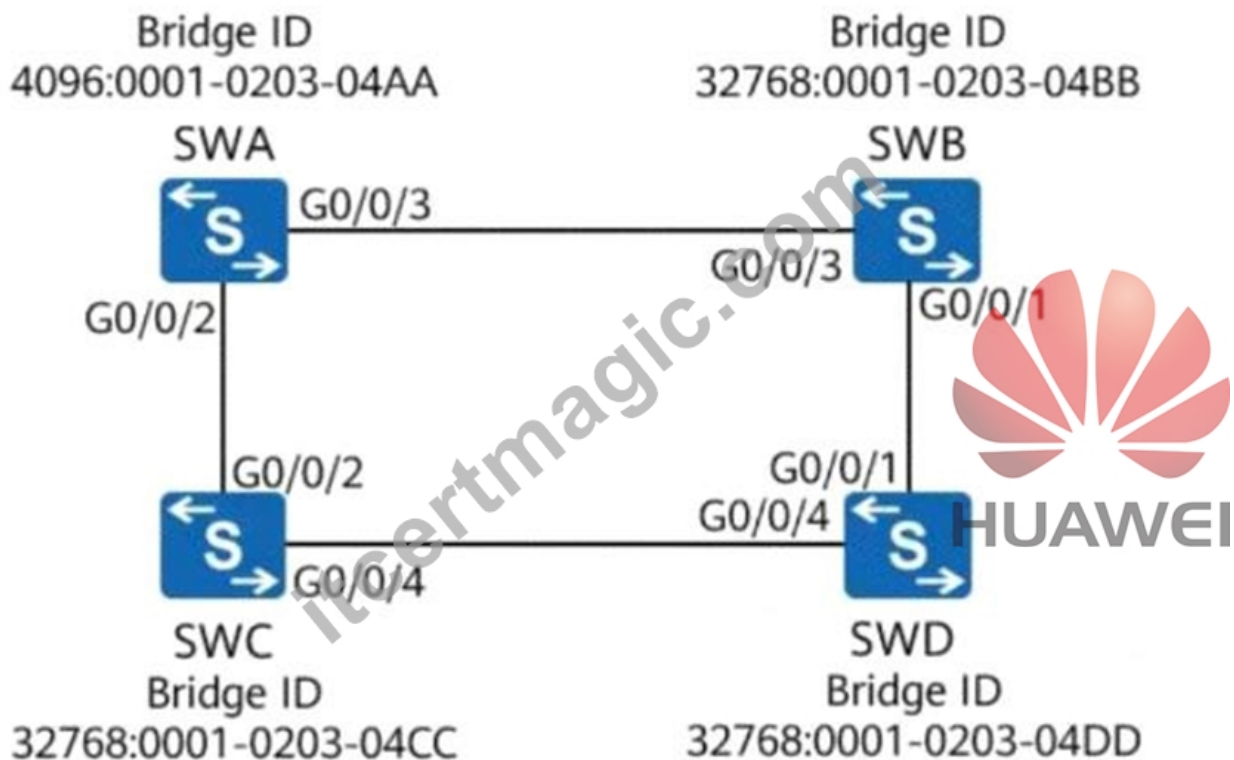

Management Information Base (MIB) Information Base) is a virtual database, which only exists on the NMS. ()

- A. True
- B. False

Answer: B

NEW QUESTION # 115

As shown in the figure, all switches run STP. Assume that the path cost of all ports is 200. What is the root path cost contained in the configuration BPDU received by G0/0/4 on SWD?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

The root path cost is calculated by summing the costs of each port on the path from the root bridge to the receiving port. In this case, assuming each link has a cost of 200, the total cost to reach the root from the indicated port would be 600, reflecting three hops from the root bridge.

NEW QUESTION # 116
