Die Produkte von Prüfung Frage werden den Kandidaten nicht nur helfen, die Netskope NSK300 Zertifizierungsprüfung zu bestehen, sondern Ihnen auch einen einjährigen kostenlosen Update-Service bieten. Sie wird den Kunden die neuesten Netskope NSK300 Prüfungsmaterialien so schnell wie möglich liefern, so dass sich die Kunden über die Prüfungsinformationen zur Netskope NSK300 Zertifizierung informieren können. Deshalb ist Prüfung Frage eine erstklassige Website. Außerdem ist der Service hier auch ausgezeichnet.

Netskope NSK300 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Netskope Platform Implementation: This section of the exam measures the abilities of Cloud Security Engineers and focuses on implementing the Netskope Security Cloud Platform using recommended steering architectures and deployment approaches. It includes key concepts such as API-enabled protection and real-time protection features, ensuring candidates understand how to deploy Netskope to secure cloud usage effectively within enterprise networks.

Thema 2	• Netskope Platform Monitoring: This section of the exam measures the capabilities of Security Operations Center (SOC) Analysts and focuses on monitoring the platform through reporting and analytics tools. It highlights how Netskope insights support visibility into user activity, cloud app behavior, and policy effectiveness to help organizations maintain a continuous cloud security posture.
Thema 3	• Netskope Platform Troubleshooting: This section of the exam measures the skills of Support Engineers and focuses on identifying and resolving common issues within the Netskope platform. It includes troubleshooting client connectivity problems, analyzing steering methods, resolving general connectivity concerns, and addressing SAML integration issues. The section ensures candidates can diagnose and fix issues that impact platform performance and user access.
Thema 4	• Netskope Platform Management: This section of the exam measures the skills of Security Administrators and covers essential administrative tasks required to manage the Netskope Security Cloud Platform. It includes managing DLP functions, handling identity integrations, and monitoring Netskope components to maintain platform stability. The domain ensures professionals can manage daily operations and maintain strong access, data, and security controls.
Thema 5	• Cloud Security Solutions: This section of the exam measures the skills of Cloud Security Analysts and covers the core components and functions of the Netskope Security Cloud Platform. It includes understanding how the platform integrates with enterprise environments, the deployment methods supported by Netskope, and the role of various microservices in delivering cloud-based security. The focus is on ensuring candidates can recognize how Netskope's architecture protects users, applications, and data across cloud services.

NSK300 Schulungsangebot - NSK300 Simulationsfragen & NSK300 kostenlos downloaden

Machen Sie sich noch Sorgen um die schwere Netskope NSK300 Zertifizierungsprüfung? Keine Sorgen. Mit den Schulungsunterlagen zur Netskope NSK300 Zertifizierungsprüfung von PrüfungFrage ist jede IT-Zertifizierung einfacher geworden. Die Schulungsunterlagen zur Netskope NSK300 Zertifizierungsprüfung von PrüfungFrage sind der Vorläufer für die Netskope NSK300 Zertifizierungsprüfung.

Netskope Certified Cloud Security Architect NSK300 Prüfungsfragen mit Lösungen (Q60-Q65):

60. Frage

Review the exhibit.

You are the proxy administrator for a medical devices company. You recently changed a pilot group of users from cloud app steering to all Web traffic. Pilot group users have started to report that they receive the error shown in the exhibit when attempting to access the company intranet site that is publicly available. During troubleshooting, you realize that this site uses your company's internal certificate authority for SSL certificates.

Which three statements describe ways to solve this issue? (Choose three.)

- A. Import the root certificate for your internal certificate authority into Netskope.
- B. Create a Real-time Protection policy to allow access.
- C. Change the SSL Error Settings from Block to Bypass in the Netskope tenant.
- D. Bypass SSL inspection for the affected site(s).
- E. Instruct the user to proceed past the error message

Antwort: A,C,D

Begründung:

A . Import the root certificate for your internal certificate authority into Netskope:

This step ensures that Netskope recognizes and trusts SSL certificates issued by your company's internal certificate authority. By

importing the root certificate, you enable proper SSL inspection and validation for internal sites.

B . Bypass SSL inspection for the affected site(s):

Since the intranet site uses your company's internal certificate authority, bypassing SSL inspection for this specific site allows users to access it without encountering SSL errors.

D . Change the SSL Error Settings from Block to Bypass in the Netskope tenant:

Adjusting the SSL Error Settings to "Bypass" allows users to proceed past SSL errors, including self-signed certificate errors. This ensures uninterrupted access to the intranet site. Reference:

61. Frage

You recently began deploying Netskope at your company. You are steering all traffic, but you discover that the Real-time Protection policies you created to protect Microsoft OneDrive are not being enforced.

Which default setting in the UI would you change to solve this problem?

- A. Remove the default steering exception for Cloud Storage.
- B. Disable the default Microsoft appsuite SSL rule.
- C. Disable the default certificate-pinned application
- **D. Remove the default steering exception for domains.**

Antwort: D

Begründung:

When deploying Netskope and steering all traffic, if you find that the Real-time Protection policies for Microsoft OneDrive are not being enforced, the likely issue is with the default steering exceptions. To resolve this, you should remove the default steering exception for domains . This is because the default exceptions may include domains related to Microsoft services, which could prevent the Real-time Protection policies from being applied to traffic directed towards OneDrive. By removing these exceptions, you ensure that all traffic, including that to OneDrive, is subject to the policies you have set up.

This recommendation is based on best practices for configuring Real-time Protection policies in Netskope, as outlined in their documentation, which suggests that exceptions should be carefully managed to ensure that security policies are enforced as intended

62. Frage

You are troubleshooting an issue with users who are unable to reach a financial SaaS application when their traffic passes through Netskope. You determine that this is because of IP restrictions in place with the SaaS vendor. You are unable to add Netskope's IP ranges at this time, but need to allow the traffic.

How would you allow this traffic?

- A. Use NPATo implement Source IP anchoring so the traffic will egress from the corporate data center.
- B. Use Explicit Proxy Over Tunnel (EPoT) so the traffic will egress from the corporate data center.
- **C. Use Cloud Explicit Proxy so the traffic will egress from the corporate data center**
- D. Use an IPsec tunnel to forward traffic so it will egress from the corporate data center

Antwort: C

Begründung:

To allow traffic to a financial SaaS application that is being blocked due to IP restrictions, the best option is to use Cloud Explicit Proxy. This method allows traffic to egress from the corporate data center without requiring Netskope's IP ranges to be added to the SaaS vendor's allowlist. By configuring an allowlist in the Cloud Explicit Proxy settings, you can add any source egress IP addresses for your on-premises users, and Netskope will allow the traffic from the added user and IP address without authenticating1.

63. Frage

You are asked to ensure that a Web application your company uses is both reachable and decrypted by Netskope. This application is served using HTTPS on port 6443. Netskope is configured with a default Cloud Firewall configuration and the steering configuration is set for All Traffic.

Which statement is correct in this scenario?

- A. Nothing is required since Netskope is steering all traffic.
- **B. Enable "Steer non-standard ports" in the steering configuration and add the domain and port as a new non-standard port**
- C. Enable "Steer non-standard ports" in the steering configuration and create a corresponding Real-time Protection policy to allow the traffic
- D. Create a Firewall App in Netskope along with the corresponding Real-time Protection policy to allow the traffic.

Antwort: B

Begründung:

To ensure that the web application using HTTPS on port 6443 is both reachable and decrypted by Netskope, the correct action is to enable "Steer non-standard ports" in the steering configuration and add the domain and port as a new non-standard port. This is because Netskope's default configuration steers standard HTTP/HTTPS traffic, typically on ports 80 and 443. Since port 6443 is a non-standard port for HTTPS traffic, it requires explicit configuration to be steered through Netskope1.

64. Frage

You are asked to create a customized restricted administrator role in your Netskope tenant for a newly hired employee. Which two statements are correct in this scenario? (Choose two.)

- A. All role privileges default to Read Only for all functional areas.
- B. An admin role prevents admins from downloading and viewing file content by default.
- **C. The scope of the data shown in the UI can be restricted to specific events.**
- **D. Obfuscation can be applied to all functional areas.**

Antwort: C,D

65. Frage

.....

PrüfungFrage ist eine Website, die den Traum vielen IT-Fachleuten erfüllen kann. Wenn Sie einen IT-Traum haben, dann wählen Sie doch PrüfungFrage. Die Fragenkataloge zur Netskope NSK300 Zertifizierungsprüfung von PrüfungFrage sind von vielen IT-Fachleuten begehrt, die Ihnen helfen, die NSK300 Zertifizierung zu bestehen und im Berufsleben befördert zu werden.
