

# Examinations JN0-481 Actual Questions | Latest JN0-481 Test Pass4sure

DOWNLOAD the newest DumpsKing JN0-481 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1h-8J42QpB8mYR7gE6RGgnroQkvAC8XZY>

If you have bought the JN0-481 exam questions before, then you will know that we have free demos for you to download before your purchase. Free demos of our JN0-481 study guide are understandable materials as well as the newest information for your practice. Under coordinated synergy of all staff, our JN0-481 Practice Braindumps achieved a higher level of perfection by keeping close attention with the trend of dynamic market.

## Juniper JN0-481 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Apstra Design Phase: Covers pre-deployment planning elements such as reference designs, logical devices, device profiles, rack types, interface maps, and templates, including their configuration and troubleshooting.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Blueprint Operations: Covers day-to-day blueprint management including making and reverting changes, querying, virtual networks, Time Voyager, anomaly detection, property sets, configlets, and configuration types.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Juniper Apstra Architecture: Introduces core Apstra components including the server, device agents, and UI, along with administrative features such as RBAC, event logging, and syslog.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Data Center Architectures (IP Fabrics, EVPN-VXLAN): Covers spine-leaf topology design, ECMP load balancing, and underlay</li><li>• overlay routing, along with EVPN and VXLAN concepts including route types, bridge domains, VNI-to-VLAN mapping, and VTEP functions.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>• Data Center Multitenancy: Covers multi-tenant network management through routing zones, VRFs, virtual networks, connectivity templates, security policies, VMware integration, and Data Center Interconnect.</li></ul>

## Important Features of DumpsKing Juniper JN0-481 Exam Questions

Though there are three different versions of our JN0-481 practice guide to cater to all needs of our worthy customers: the PDF, Software and APP online. I love the Software version the most. The software version of our JN0-481 exam questions can be used in the Windows system, which is designed by the experts from our company. The functions of the software version are very special. For example, the software version of our JN0-481 Learning Engine can simulate the real exam environment.

## Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q52-Q57):

### NEW QUESTION # 52

The same connectivity template is applied to the ge-0/0/6 interface on both borderleaf1 and borderleaf2 nodes. This connectivity template describes the intended configuration of the EBGp session between each of the borderleaf nodes and the external router. You want to ensure that the 172.23.x/24 routes are not installed in the borderleaf nodes' Finance routing table. Referring to the exhibit, what would you change in Juniper Apstra to accomplish this task?

- A. Add an aggregate prefix to the routing policy.
- **B. Modify the import policy to only allow the default route.**
- C. Select the "Expect Default IPv4 Route" checkbox.
- D. Modify the export policy to only allow the default route.

**Answer: B**

Explanation:

The exhibit shows that the border leaf is receiving multiple routes (including 172.23.x/24) from the external router via EBGp. To prevent these specific routes from being installed in the Finance routing table, you must modify the import policy applied to the EBGp session so that only the default route (0.0.0.0/0) is permitted. This ensures the border leaf nodes accept only the intended default route and deny the 172.23.x/24 prefixes.

### NEW QUESTION # 53

Which fabric type should be chosen in a template to create a five-stage Clos?

- **A. pod-based**
- B. collapsed
- C. rack-based
- D. circuit switched

**Answer: A**

Explanation:

A five-stage Clos architecture allows for large-scale topologies with an additional aggregation layer that interconnects multiple pods into a single fabric. A pod is a group of racks that share the same spine devices. A rack is a group of leaf devices that connect to the same servers. To create a five-stage Clos network using Juniper Apstra, you need to choose the pod-based fabric type in the template creation wizard. This will allow you to specify the number of pods, planes, spines, and leaves for your network design.

### NEW QUESTION # 54

Referring to the exhibit, how many broadcast domains will an Ethernet frame pass through when traversing the IP fabric from Server A to Server B?

- A. 0
- B. 1
- C. 2
- **D. 3**

**Answer: D**

Explanation:

Referring to the exhibit, the image shows a simplified diagram of an IP fabric network connecting two servers, labeled as Server A and Server B. The IP fabric is a network architecture that uses a Clos topology to provide high bandwidth, low latency, and scalability for data center networks.

The IP fabric consists of spine and leaf devices that use BGP as the routing protocol and VXLAN as the overlay technology.

A broadcast domain is a logical portion of a network where any device can directly transmit broadcast frames to other devices at the data link layer (OSI Layer 2). A broadcast frame is a frame that has a destination MAC address of all ones (FF:FF:FF:FF:FF:FF), which means that it is intended for all devices in the same broadcast domain. A broadcast domain is usually bounded by a router, which does not forward broadcast frames to other networks.

In the exhibit, there are two broadcast domains that an Ethernet frame will pass through when traversing the IP fabric from Server A to Server B. The first broadcast domain is the one that contains Server A and the leaf device that it is connected to. The second

broadcast domain is the one that contains Server B and the leaf device that it is connected to. The IP fabric itself is not a broadcast domain, because it uses IP routing and VXLAN encapsulation to transport the Ethernet frames over the Layer 3 network.

#### NEW QUESTION # 55

In the Juniper Apstra UI, what are two aspects that you are able to query under the Active tab within a blueprint? (Choose two.)

- A. Route Zone
- B. ARP
- C. MAC
- D. Virtual Network

**Answer: B,C**

Explanation:

In the Juniper Apstra UI, under the Active tab within a blueprint, operators can query real-time operational data collected from devices. This includes aspects such as ARP tables and MAC tables, which help verify active device state and connectivity in the deployed fabric.

#### NEW QUESTION # 56

What does EVPN use to identify which remote leaf device advertised the EVPN route?

- A. a community tag
- B. a route target value
- C. a VRF target value
- D. a route distinguisher value

**Answer: D**

Explanation:

EVPN uses a route distinguisher (RD) value to identify which remote leaf device advertised the EVPN route. An RD is a 64-bit value that is prepended to the EVPN NLRI to create a unique VPNv4 or VPNv6 prefix. The RD value is usually derived from the IP address of the PE that originates the EVPN route. By comparing the RD values of different EVPN routes, a PE can determine which remote PE advertised the route and which VRF the route belongs to.

#### NEW QUESTION # 57

.....

Nowadays the requirements for jobs are higher than any time in the past. The job-hunters face huge pressure because most jobs require both working abilities and profound major knowledge. Passing JN0-481 exam can help you find the ideal job. If you buy our JN0-481 Test Prep you will pass the exam easily and successfully, and you will realize you dream to find an ideal job and earn a high income. Our product is of high quality and the passing rate and the hit rate are both high.
