## Salesforce Developers PDII-JPN free valid dumps & Salesforce PDII-JPN actual pdf exam

According to the candidate's demand, DumpsKing will update Salesforce PDII-JPN dumps. DumpsKing is a composite of top IT

experts, certified trainers and competent authors for Salesforce PDII-JPN exam. They collate the braindumps, guarantee the quality! No matter how the times change, DumpsKing good quality will never change. After the majority of candidates purchase our products, they passed Salesforce PDII-JPN Certification Exam, which indicates DumpsKing has high quality.

## Salesforce Sample Questions (Q142-Q147):

### NEW QUESTION # 142

展示する。

```
1 // Lightning Web Component HTML file
2
3 <template>
4   <lightning-button label="Call server" onclick={handleClick}</lightning-button>
5 </template>
6
7 // Lightning Web Component JS file
8
9 import { LightningElement } from 'lwc';
10 import serverEcho from '@salesforce/apex/SimpleServerSideController.serverEcho';
11
12 export default class HelloWorld extends LightningElement {
13   firstName = 'world';
14   handleClick() {
15     serverEcho({ firstName: this.firstName })
16       .then((result) => {
17         alert('From server: ' + result);
18       })
19       .catch((error) => {
20         console.error(error);
21       });
22   }
23 }
24
25 // Apex Controller for Lightning Component
26
27 public with sharing class SimpleServerSideController {
28   @AuraEnabled
29   public static String serverEcho(sObject firstName) {
30     String firstNameStr = (String)firstName.get('firstName');
31     return ('Hello from the server, ' + firstNameStr);
32   }
33 }
```

上記のコードを考えると、コードが機能するには、Apex コントローラでどの 2 つの変更を行う必要がありますか？

2 つの答えを選択してください

- A. Apex コントローラの行 05 の引数を **subject** から **string** に変更します。
- B. Apex コントローラから行 06 を削除し、代わりに行 07 の戻りで **firstName** を使用します。
- C. メソッドのシグネチャを **String** にパブリックではなく、グローバルに静的に変更します。
- D. 単一のメソッドだけでなく、クラス全体に **@AuraEnabled** としてアノテーションを付けます。

**Answer: A,B**

Explanation:

Based on the code provided, here are the necessary changes:

\* Change B is required because the argument in the Apex controller's serverEcho method must match the data type expected by the JavaScript calling the method. The Apex method expects an Object named firstName, which is then cast to a String inside the method. The JavaScript is passing an object with a property firstName, so no change is needed in the JavaScript.

\* Change D is correct because line 06 is redundant and unnecessary. We can directly use firstName in the return statement as it is already a String type. The get() method is typically used when you have a Map and you need to retrieve a value by its key. Since firstName is already being passed as a String, there's no need to cast it or retrieve it using get().

### NEW QUESTION # 143

非同期 Apex を使用することによってのみ実行できるユースケースはどれですか？

- A. Apex トリガから Web サービスを呼び出す
- B. 将来完了するバッチプロセスをスケジュールするために呼び出しを行う
- C. 挿入完了後のレコードの更新
- D. 数万件のレコードをクエリする

Answer: A

### NEW QUESTION # 144

呼び出し可能なメソッドは、sObject をパラメータとして受け入れます。

- A. 偽
- B. 真

Answer: A

### NEW QUESTION # 145

Apex トリガは、商談レコードが成約および成約としてマークされるたびに、契約レコードを作成します。このトリガーは、(最近の買収のため)過去の商談レコードを Salesforce インスタンスにロードする必要があることを除いて、うまく機能しています。

レコードのテストバッチがロードされると、Apex トリガによって契約レコードが作成されます。

開発者は、商談を一括ロードするときに契約レコードが作成されないようにする任務を負っていますが、毎日のユーザーは依然として契約レコードを作成する必要があります。

これを達成するために Apex トリガーを更新する最も拡張可能な方法は何ですか？

- A. 階層カスタム設定を使用して、データをロードするユーザーのトリガー内のロジックの実行をスキップします。
- B. データをロードするユーザーのプロファイル ID をトリガーに追加します。これにより、このユーザーに対してトリガーが起動されなくなります。
- C. データをロードするユーザーによる契約の作成を防ぐために、契約に検証ルールを追加します。
- D. リストのカスタム設定を使用して、データをロードするユーザーのトリガーを無効にします。

Answer: A

Explanation:

A hierarchy custom setting can be used to create a configuration that the trigger checks before executing its logic. This allows admins to set the configuration to bypass the trigger logic when loading data, without changing the trigger itself or impacting other users. References: Salesforce Help - Custom Settings

### NEW QUESTION # 146

開発者がカスタム設定を使用して、時々変更される設定データを保存していました。しかし、最近更新した一部のサンドボックスでテストが失敗するようになりました。今後この問題を解消するにはどうすればよいでしょうか？

- A. カスタム設定の設定タイプを階層に設定します。3
- B. カスタム設定をカスタムメタデータに置き換えます。2
- C. カスタム設定の設定タイプをリストに設定します。
- D. カスタム設定を静的リソースに置き換えます。1

Answer: B

Explanation:

5

The issue described is a direct result of how Salesforce treats data during sandbox refreshes and unit testing.

Custom Settings (both List and Hierarchy) store their information as data records. By default, sandbox refreshes do not include data records from Production unless it is a Full Sandbox. Furthermore, Apex unit tests are isolated from organization data; they cannot "see" Custom Setting records unless the records are explicitly created within the test or the `@isTest(SeeAllData=true)` annotation is used (which is a poor practice).

Custom Metadata (Option C) solves this by treating configuration records as metadata rather than data.

Because they are metadata, the records are automatically included in every sandbox refresh and are deployable via Change Sets or the Salesforce CLI. Most importantly, Custom Metadata is visible to Apex unit tests without needing to create setup data or bypass test isolation. This ensures that configuration-dependent logic remains consistent across all environments and that tests pass reliably after a refresh. Replacing Custom Settings with Custom Metadata is the modern Salesforce standard for environment-independent configuration management.
