## CompTIA A+ Certification Exam: Core 2 Sample Questions (Q89-Q94):

### NEW QUESTION # 89

A user reports a virus is on a PC. The user installs additional real-time protection antivirus software, and the PC begins performing extremely slow. Which of the following steps should the technician take to resolve the issue?

- A. Activate real-time protection on both antivirus software programs
- B. Enable the quarantine feature on both antivirus software programs.
- **C. Remove the user-installed antivirus software program**
- D. Uninstall one antivirus software program and install a different one.
- E. Launch Windows Update, and then download and install OS updates

**Answer: C**

Explanation:

Removing the user-installed antivirus software program is the best way to resolve the issue of extremely slow performance caused by installing additional real-time protection antivirus software on a PC. Having more than one antivirus software program running at the same time can cause conflicts, resource consumption and performance degradation. Uninstalling one antivirus software program and installing a different one, activating real-time protection on both antivirus software programs, enabling the quarantine feature on both antivirus software programs and launching Windows Update are not effective ways to resolve the issue. ### NEW QUESTION # 90

A technician is helping a customer connect to a shared drive. The technician notices some unused drives that have already been mapped and wants to disconnect those drives first. Which of the following commands should the technician use?

- **A. net use**
- B. netstat
- C. rmdir
- D. format
- E. diskpart

**Answer: A**

Explanation:

The net use (Option D) command is used to manage network drives in Windows. It can be used to display and disconnect mapped network drives, making it the correct choice for removing unused network drives.

format (Option A) is used to format disks, not for managing network drives.

netstat (Option B) displays network connections but doesn't manage network drives.

diskpart (Option C) is used for disk partitioning, not network drive management.

rmdir (Option E) is used to remove directories, not network drives.

CompTIA A+ Core 2 Reference:

1.2 - Use the appropriate Microsoft command-line tool, including net use for managing network drives .

### NEW QUESTION # 91

A user is unable to see the devices that are present on the network after changing some network settings in the Control Panel. Which of the following settings did the user change on the Windows 10 computer?

- A. The UAC level to its highest level
- B. The Windows Firewall from on to off
- **C. The network type from private to public**
- D. The file-sharing permissions

**Answer: C**

Explanation:

Comprehensive and Detailed In-Depth

In Windows, when a user changes the network type from private to public, network discovery and file sharing are disabled for security reasons. Public networks are treated as untrusted, and devices on the network are hidden from the user.

B . The Windows Firewall from on to off - Incorrect. Disabling the firewall does not block network visibility.

C . The UAC level to its highest level - Incorrect. User Account Control (UAC) settings control administrative privileges, not network visibility.

D . The file-sharing permissions - Incorrect. File-sharing permissions only affect access to shared folders, not network visibility.

Reference:

### NEW QUESTION # 92

A proxy server is required for internet access from a corporate network. Which of the following should a technician perform to manually configure a Windows 10 device for internet access?

- A. Enable the use of a proxy server and enter an address for it under Control Panel > Internet Options > Connections > LAN settings.
- B. Set the proxy server as the default gateway under the computer's network connection IP settings by selecting Manual, then entering the proxy server's IP address under Gateway.
- C. Open a command prompt and run ipconfig /release, followed by ipconfig /renew.
- D. Add the proxy server's URL and IP address to the computer's hosts file under C:\windows\System32\drivers\etc.

**Answer: A**

Explanation:

Detailed Explanation with Core 2 References:Configuring a proxy server in Windows 10 can be done through the Internet Options under LAN settings, where the user can enable and enter a proxy server's address. This aligns with Core 2's objectives of configuring network settings in a Windows environment (Core 2 Objective 1.4).

### NEW QUESTION # 93

A technician needs to format a USB drive to transfer 20GB of data from a Linux computer to a Windows computer. Which of the following filesystems will the technician MOST likely use?

- A. NTFS
- B. FAT32
- C. ext4
- D. exFAT

**Answer: A**

Explanation:

Since Windows systems support FAT32 and NTFS "out of the box" and Linux supports a whole range of them including FAT32 and NTFS, it is highly recommended to format the partition or disk you want to share in either FAT32 or NTFS, but since FAT32 has a file size limit of 4.2 GB, if you happen to work with huge files, then it is better you use NTFS

### NEW QUESTION # 94

.....

2Pass4sure CompTIA 220-1102 exam dumps are the best reference materials. 2Pass4sure test questions and answers are the training materials you have been looking for.
