

Valid CAS-005 Exam Sims - CAS-005 Quiz

DOWNLOAD the newest Real4exams CAS-005 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1ZdAdVZpro6aFcjeRpZ62WuPY-hQ51lgy>

As a worldwide leader in offering the best CAS-005 test torrent in the market, Real4exams are committed to providing update information on CAS-005 exam questions that have been checked many times by our professional expert, and we provide comprehensive service to the majority of consumers and strive for constructing an integrated service. What's more, we have achieved breakthroughs in certification training application as well as interactive sharing and after-sales service. It is worth for you to purchase our CAS-005 training braindump.

To stand in the race and get hold of what you deserve in your career, you must check with all the Real4exams CompTIA CAS-005 Exam Questions that can help you study for the CAS-005 certification exam and clear it with a brilliant score. You can easily get these CompTIA SecurityX Certification Exam (CAS-005) exam dumps from Real4exams that are helping candidates achieve their goals. As a working person, the CompTIA CAS-005 Practice Exam will be a great help because you are left with little time to prepare for the CAS-005 certification exam which you cannot waste to make time for the CAS-005 exam questions.

Effective CompTIA CAS-005 Exam Preparation In a Short Time

The CAS-005 exam real questions are the ideal and recommended study material for quick and complete CompTIA CAS-005 exam preparation. As a CAS-005 Exam candidate you should not ignore the CAS-005 exam questions and must add the

CompTIA SecurityX Certification Exam Sample Questions (Q119-Q124):

NEW QUESTION # 119

A company's security policy states that any publicly available server must be patched within 12 hours after a patch is released. A recent IIS zero-day vulnerability was discovered that affects all versions of the Windows Server OS:

Which of the following hosts should a security analyst patch first once a patch is available?

- A. 0
- B. 1
- C. 2
- **D. 3**
- E. 4
- F. 5

Answer: D

Explanation:

Based on the security policy that any publicly available server must be patched within 12 hours after a patch is released, the security analyst should patch Host 1 first. Here's why:

* Public Availability: Host 1 is externally available, making it accessible from the internet. Publicly available servers are at higher risk of being targeted by attackers, especially when a zero-day vulnerability is known.

* Exposure to Threats: Host 1 has IIS installed and is publicly accessible, increasing its exposure to potential exploitation. Patching this host first reduces the risk of a successful attack.

* Prioritization of Critical Assets: According to best practices, assets that are exposed to higher risks should be prioritized for patching to mitigate potential threats promptly.

NEW QUESTION # 120

Which of the following best describes the reason a network architect would enable forward secrecy on all VPN tunnels?

- **A. This process reduces the success of attackers performing cryptanalysis.**
- B. This process is a requirement to enable hardware-accelerated cryptography.
- C. Modern cryptographic protocols list this process as a prerequisite for use.
- D. The business requirements state that confidentiality is a critical success factor.

Answer: A

Explanation:

Forward secrecy, also known as perfect forward secrecy, is a feature of certain key agreement protocols that ensures session keys will not be compromised even if the server's private key is compromised in the future. By enabling forward secrecy on VPN tunnels, each session uses a unique key, and these keys are not derived from a common master key. This means that even if an attacker obtains the server's private key, they cannot decrypt past sessions, thereby significantly reducing the effectiveness of cryptanalysis attacks.

NEW QUESTION # 121

A security engineer is assisting a DevOps team that has the following requirements for container images:

Ensure container images are hashed and use version controls.

Ensure container images are up to date and scanned for vulnerabilities.

Which of the following should the security engineer do to meet these requirements?

- **A. Enable new security and quality checks within a CI/CD pipeline.**
- B. Enable audits on the container image and monitor for configuration changes.
- C. Enable clusters on the container image and configure the mesh with ACLs.

- D. Enable pulling of the container image from the vendor repository and deploy directly to operations.

Answer: A

Explanation:

Implementing security and quality checks in a CI/CD pipeline ensures that:

Container images are scanned for vulnerabilities before deployment.

Version control is enforced, preventing unauthorized changes.

Hashes validate image integrity.

Other options:

A (Configuring ACLs on mesh networks) improves access control but does not ensure scanning.

C (Audits on container images) detect changes but do not enforce best practices.

D (Pulling from a vendor repository) does not ensure vulnerability scanning.

NEW QUESTION # 122

An organization that performs real-time financial processing is implementing a new backup solution. Given the following business requirements:

- The backup solution must reduce the risk for potential backup compromise
- The backup solution must be resilient to a ransomware attack.
- The time to restore from backups is less important than the backup data integrity
- Multiple copies of production data must be maintained

Which of the following backup strategies best meets these requirements?

- **A. Creating a secondary, immutable storage array and updating it with live data on a continuous basis**
- B. Setting up antitempering on the databases to ensure data cannot be changed unintentionally
- C. Utilizing two connected storage arrays and ensuring the arrays constantly sync
- D. Enabling remote journaling on the databases to ensure real-time transactions are mirrored

Answer: A

Explanation:

Creating a secondary, immutable storage array and updating it with live data on a continuous basis: An immutable storage array ensures that data, once written, cannot be altered or deleted.

This greatly reduces the risk of backup compromise and provides resilience against ransomware attacks, as the ransomware cannot modify or delete the backup data. Maintaining multiple copies of production data with an immutable storage solution ensures data integrity and compliance with the requirement for multiple copies.

NEW QUESTION # 123

A security administrator needs to automate alerting. The server generates structured log files that need to be parsed to determine whether an alarm has been triggered. Given the following code function:

Which of the following is most likely the log input that the code will parse?

- A. ☐
- **B. ☒**
- C. ☐
- D. ☐

Answer: B

Explanation:

The code function provided in the question seems to be designed to parse JSON formatted logs to check for an alarm state.

Option A is a JSON format that matches the structure likely expected by the code. The presence of the "error_log" and "InAlarmState" keys suggests that this is the correct input format.

NEW QUESTION # 124

.....

Our CAS-005 prep material target all users and any learners, regardless of their age, gender and education background. We provide 3 versions of our CAS-005 learning prep for the clients to choose based on the consideration that all the users can choose the most suitable version to learn. The 3 versions each support different using method and equipment and the client can use the CAS-005 Exam study materials on the smart phones, laptops or the tablet computers. The clients can choose the version of our CAS-005 exam questions which supports their equipment on their hands to learn.
