VMware vSphere Foundation 5.2 Administrator Sample Questions (Q30-Q35):

NEW QUESTION # 30
An administrator has been tasked with expanding an existing VMware Cloud Foundation environment by adding a new workload domain. The environment currently has one management domain and one VI workload domain.
What options are available to the administrator for deploying NSX in the second VI workload domain?

- A. The new workload domain must have a dedicated NSX Fabric.
- B. The new workload domain can have its own dedicated NSX Fabric or it can join the existing NSX Fabric configured in the management domain.
- C. The new workload domain can have its own dedicated NSX Fabric or it can join the existing NSX Fabric configured in the existing VI domain.

- D. The new workload domain can have a dedicated NSX Fabric or it can join the existing NSX Fabric configured in either the management domain or existing VI domain.

Answer: D

Explanation:
When expanding a VMware Cloud Foundation environment with a new workload domain, you have the flexibility to either configure a dedicated NSX Fabric for the new domain or join an existing NSX Fabric from either the management domain or a previously established VI workload domain. This allows for consistent and scalable network virtualization across multiple domains in the environment.

NEW QUESTION # 31
An organization is implementing a downtime avoidance solution and wants to ensure continuous availability of applications across separate sites that are connected via a high bandwidth/low latency link.
Which two VMware Cloud Foundation components support this capability with stretched clusters? (Choose two.)

- A. NSX Firewall
- B. vSphere
- C. vSAN
- D. vSphere Replication
- E. vVOL

Answer: B,C

Explanation:
vSAN: vSAN supports stretched clusters, allowing data to be mirrored across multiple sites to ensure continuous availability and enable high availability for virtual machines in case of a site failure.
vSphere: vSphere also supports stretched clusters, enabling the high availability of applications across multiple sites by allowing virtual machines to be run on either site in the event of a failure.

NEW QUESTION # 32
What is the primary benefit of using VMware vCenter Content Libraries?

- A. They provide enhanced security for vCenter Server.
- B. They enable centralized management and distribution of VM templates, ISO images, and scripts.
- C. They allow for the automation of VM snapshots.
- D. They facilitate the creation of virtual networks.

Answer: B

Explanation:
VMware vCenter Content Libraries provide a centralized location for storing and managing virtual machine templates, ISO images, and scripts, making it easier to distribute these resources across multiple vCenter instances. This helps streamline the deployment process, ensuring consistency and reducing the overhead of managing these resources manually.

NEW QUESTION # 33
When configuring a new port group on a Virtual Distributed Switch (VDS), what is the purpose of setting a VLAN ID?

- A. To automate the creation of VMs within the port group.
- B. To segment and isolate network traffic.
- C. To enable load balancing across multiple uplinks.
- D. To manage storage replication settings

Answer: B

Explanation:
Setting a VLAN ID on a port group on a Virtual Distributed Switch (VDS) allows for network segmentation by tagging traffic with the appropriate VLAN ID. This enables isolation of network traffic between different VLANs, ensuring that communication is

restricted to specific segments of the network as required.
