Reliable TDA-C01 Braindumps Files - TDA-C01 Free Updates

It is browser-based; therefore no need to install it, and you can start practicing for the Tableau Certified Data Analyst (TDA-C01) exam by creating the Tableau TDA-C01 practice test. You don't need to install any separate software or plugin to use it on your system to practice for your actual Tableau Certified Data Analyst (TDA-C01) exam. Exam-Killer Tableau Certified Data Analyst (TDA-C01) web-based practice software is supported by all well-known browsers like Chrome, Firefox, Opera, Internet Explorer, etc.

Tableau TDA-C01 is a certification exam offered by Tableau for individuals who want to establish their expertise in data analysis using Tableau. Tableau Certified Data Analyst certification is designed for professionals who want to demonstrate their advanced knowledge and skills in data analysis and visualization. The Tableau TDA-C01 Certification Exam validates an individual's ability to use Tableau to connect to various data sources, create visualizations, and analyze data to make informed business decisions.

Tableau Certified Data Analyst Sample Questions (Q153-Q158):

NEW QUESTION # 153

You have a dashboard that contains two sheets named Sheet 1 and Sheet 2.

You want to add an object to the dashboard that users can click to switch to a different dashboard in the workbook.

Which object should you add to the dashboard?

Answer:

Explanation:

Explanation:

The object that you should add to the dashboard to allow users to switch to a different dashboard in the workbook is Navigation. Navigation objects are used to create links between dashboards or sheets in a workbook. You can add a navigation object to a dashboard by dragging it from the list of objects and dropping it on the dashboard. You can then configure the navigation object to specify the destination dashboard or sheet that you want users to navigate to when they click on it.

You can learn more about navigation objects and how to use them in this article:

https://help.tableau.com/current/pro/desktop/en-us/dashboards_navigation.htm

NEW QUESTION # 154

Open the link to Book1 found on the desktop. Open the Movie Durations worksheet.

Replace the existing data source with the Netflix_2019 data source.

- A. Send us your
- B. Send us your feedback on it.

Answer: B

NEW QUESTION # 155

You have the following bar chart.

You want the chart to appear as shown in the Mowing exhibit.

What should you add?

- A. A reference line
- B. A distribution band
- C. A reference band
- D. An average line

Answer: A

Explanation:

A reference line is used in Tableau to display a line at a constant value or a computed value such as an average, median, minimum, or maximum in a bar chart. In this case, adding a reference line would allow you to show the median, upper quartile, and lower quartile, which corresponds to the changes shown in the bar chart.

NEW QUESTION # 156

You have a sales dataset that contains the following fields.

You need to analyze the average revenue per product in different regions over time.

Which two fields should be measures? Choose two.

- A. Order Date
- B. Product Name
- C. Revenue
- D. Customer Region
- E. Quantity

Answer: C,E

Explanation:

To analyze the average revenue per product in different regions over time, you need to use two fields that contain numeric, quantitative values that you can measure and aggregate. Quantity and Revenue are both measures that fit this criterion. You can multiply Quantity and Revenue to get the total sales for each product, and then divide by the number of products to get the average revenue. You can also use these measures to create charts and tables that show the trends and comparisons over time and across regions. References:

NEW QUESTION # 157

You create a parameter named Choose Region that contains values from a field named Region.

You want users to be able to use the Choose Region parameter to interact with a chart by toggling between different regions. What should you do next?

- A. Set the Choose Region parameter to Single Value (list)
- B. Add the [Region] = [choose Region] formula to the Filters card
- C. Add Region to the Filters card
- D. Add the Choose Region parameter to the Pages card

Answer: C

Explanation:

To use the Choose Region parameter to interact with a chart by toggling between different regions, you should add the [Region] = [Choose Region] formula to the Filters card. This formula will create a boolean filter that returns TRUE if the value in the Region field matches the value in the Choose Region parameter, and FALSE otherwise. You can add this formula to the Filters card by right-clicking on it and selecting Add Filter from the menu. Then you can select Condition from the dialog box and enter the formula in the text box. This will filter the chart to show only the data for the selected region.

The other options are not correct for this scenario. Adding Region to the Filters card will create a categorical filter that shows a list of values from the Region field, but it will not use the Choose Region parameter. Adding the Choose Region parameter to the Pages card will create a page control that allows you to cycle through different values of the parameter, but it will not filter the chart. Setting the Choose Region parameter to Single Value (list) will change how the parameter control appears on the worksheet, but it will not affect how it interacts with the chart.
