7. Where must you configure an HTTPS inbound adapter with OAuth 2.0 authentication?

- A. In the adapter
- B. In the integration flow
- C. In the SAP Integration Suite
- D. In the process runtime

Answer: B

Explanation:

An HTTPS inbound adapter is an adapter that allows an integration flow to receive messages from external systems using the HTTPS protocol. OAuth 2.0 authentication is a method of authentication that allows clients to access protected resources on behalf of a resource owner by obtaining an access token from an authorization server. To configure an HTTPS inbound adapter with OAuth 2.0 authentication, you must do it in the integration flow where you define the adapter settings. You can choose OAuth 2.0 as the authentication type and specify the required parameters, such as client ID, client secret, token URL, scope, and so on. You can also configure additional security options, such as SSL certificate, CSRF protection, and CORS policy.

8. In your integration flow process, the request reply returns a message with namespaces.

What can you do to delete namespaces from this message? Note: There are 2 correct answers to this question.

- A. Set up the request reply to delete the namespaces
- B. Use a Content Modifier
- C. Set up the namespace mapping in the Runtime Configuration.
- D. Use an XSLT mapping.

Answer: B, D

Explanation:

A Content Modifier is a step in an integration flow that allows you to modify the message header or body using expressions or constants. You can use a Content Modifier to delete namespaces from a message by using expressions that remove the namespace declarations or prefixes from the XML elements or attributes. For example, you can use the expression `replace($body,"xmlns:ns[0-9]+="+"["+"+"")` to remove all namespace declarations from the message body. An XSLT mapping is a step in an integration flow that allows you to transform the message body using an XSLT stylesheet. You can use an XSLT mapping to delete namespaces from a message by using XSLT instructions that strip or exclude the namespace information from the output XML document. For

example, you can use the instruction `<xsl:stylesheet version="1.0" xmlns:xsl="http://www.w3.org/1999/XSL/Transform" exclude-result-prefixes="#all">` to exclude all namespace prefixes from the output document.

Reference: Content Modifier | SAP Help Portal, XSLT Mapping | SAP Help Portal

9. You want to access individual entities of an HTTP call over XPath.

What must you do if no namespace mapping exists?

- A. Convert the namespaces to JSON.

4 / 5

P.S. Free 2026 SAP C-CPI-2506 dumps are available on Google Drive shared by itPass4sure: <https://drive.google.com/open?id=1nZ55x4ixwscKiM0VZZL2UGDYFwe287mX>

Compared with other education platform on the market, itPass4sure is more reliable and highly efficiently. It provide candidates who want to pass the C-CPI-2506 exam with high pass rate study materials, all customers have passed the exam in their first attempt. They all need 20-30 hours to learn on our website can pass the exam. C-CPI-2506 Exam Dump is really a high efficiently exam tool that can help you save much time and energy to do other things.

Success in the SAP Certified Associate - Integration Developer C-CPI-2506 exam is impossible without proper C-CPI-2506 exam preparation. I would recommend you select itPass4sure for your C-CPI-2506 certification test preparation. itPass4sure offers updated SAP C-CPI-2506 PDF Questions and practice tests. This C-CPI-2506 practice test material is a great help to you to prepare better for the final SAP Certified Associate - Integration Developer C-CPI-2506 exam.

Accurate C-CPI-2506 Practice Engine gives you high-effective Exam Quiz - itPass4sure

itPass4sure offers web-based C-CPI-2506 practice exams and desktop SAP Certified Associate - Integration Developer (C-CPI-

2506) practice test software so that our customers can give unlimited SAP C-CPI-2506 practice tests and make themselves perfect by tracking their mistakes. The progress of previously given SAP Certified Associate - Integration Developer (C-CPI-2506) practice tests are saved in the history so that the customers can assess it and avoid mistakes in future exams and pass SAP Certified Associate - Integration Developer (C-CPI-2506) certification exam easily.

SAP Certified Associate - Integration Developer Sample Questions (Q50-Q55):

NEW QUESTION # 50

Which of the following can you use for an XSLT mapping in an integration flow?

- A. JSON
- B. PHP
- C. HTML
- **D. XML**

Answer: D

Explanation:

XSLT (Extensible Stylesheet Language Transformations) is a language designed to transform XML documents into other XML or text formats.

In SAP Cloud Integration, XSLT mapping can only be applied when the payload is in XML format.

For JSON payloads, you would first convert JSON # XML, then apply XSLT mapping.

Other options:

HTML # Not used for XSLT mapping.

JSON # Requires conversion first, cannot be directly used.

PHP # A programming language, unrelated to mappings.

NEW QUESTION # 51

What are the maturity levels of the SAP Integration Solution Advisory Method-ology? Note: There are 2 answers to this question.

- **A. Design your hybrid integration platform.**
- B. Implement your integration architectural strategy.
- C. Enable your integration structure.
- **D. Assess your integration strategy**

Answer: A,D

Explanation:

The maturity levels of the SAP Integration Solution Advisory Methodology are as follows:

Assess your integration strategy. This level helps you evaluate your current integration landscape and identify the gaps and challenges that need to be addressed.

Design your hybrid integration platform. This level helps you define your target integration architecture and select the best-fit integration technologies and tools for your scenarios.

Implement your integration architectural strategy. This level helps you execute your integration projects and deliver value to your business.

Enable your integration structure. This level helps you establish a governance model and best practices for your integration operations and maintenance. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 52

What do you use in an integration flow to handle unexpected errors?

- A. Try-catch subprocesses
- **B. Exception-handling subprocesses**
- C. Exception handler integration flow elements
- D. Status code checks

Answer: B

Explanation:

In SAP Cloud Integration (part of Integration Suite), error handling within integration flows is implemented using: Exception Subprocesses # Dedicated subprocesses triggered by an Error Start Event to handle unexpected runtime exceptions. These allow logging, error notifications, or compensating logic.

Other options:

Try-Catch subprocesses # Not a modeling construct in SAP CPI.

Exception handler integration flow elements # Not a standard artifact; error handling is done with exception subprocesses.

Status code checks # Useful for response validation but not full error handling.

Thus, the correct answer is Exception-handling subprocesses.

NEW QUESTION # 53

What can you do in the Cloud Integration capability within SAP Integration Suite? Note: There are 2 correct answers to this question

- A. Develop custom adapters.
- B. Connect to different cloud runtime environments.
- C. Connect to multiple endpoints.
- D. Develop complex integration scenarios in Python.

Answer: A,C

Explanation:

In the Cloud Integration capability within SAP Integration Suite, you can do the following things:

Connect to multiple endpoints. You can use various adapters and protocols to connect to different systems and applications, such as SAP S/4HANA, Salesforce, SuccessFactors, and more.

Develop custom adapters. You can use the Adapter Development Kit (ADK) to create your own adapters for specific integration scenarios and requirements. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 54

You want to call an OData v4.0 interface through an adapter in the Cloud Integration capability within SAP Integration Suite. Which adapter can you use?

- A. JMS
- B. ProcessDirect
- C. SOAP
- D. HTTPS

Answer: D

Explanation:

You can use an HTTPS adapter to call an OData v4.0 interface in the Cloud Integration capability within SAP Integration Suite. An HTTPS adapter allows you to send and receive messages over HTTP or HTTPS protocols. You can use an HTTPS adapter to communicate with RESTful services, such as OData v4.0, that support HTTP methods and formats.
