Review the products offered by us by downloading 312-38 free demos and compare them with the study material offered in online course free and vendors' files. You will find our 312-38 exam dumps the better than our competitors such as exam collection and others. The excellent quality of our 312-38 exam dumps content, their relevance with the actual 312-38 Exam needs and their interactive and simple format will prove them superior and quite pertinent to your needs and requirements. If you just make sure learning of the content in the guide, there is no reason of losing the 312-38 exam.

The EC-Council Certified Network Defender (CND) certification exam is a highly respected and widely recognized certification in the field of network security. EC-Council Certified Network Defender CND certification is designed to validate the skills and knowledge of professionals who are responsible for protecting the integrity of their organization's network infrastructure. EC-Council Certified Network Defender CND certification covers a range of topics including network security, network defense, and ethical hacking.

We can resort to electronic 312-38 exam materials, which is now a commonplace, and the electronic materials with the highest quality which consists of all of the key points required for the 312-38 exam can really be considered as the royal road to learning. Fortunately, the 312-38 practice test compiled by our company are the best choice for you, you just lucky enough to click into this website, since you are sure to pass the 312-38 Exam as well as getting the related certification under the guidance of our 312-38 study guide which you can find in this website easily.

EC-COUNCIL EC-Council Certified Network Defender CND Sample Questions (Q587-Q592):

NEW QUESTION # 587

Which of the following indicators are discovered through an attacker's intent, their end goal or purpose, and a series of actions that they must take before being able to successfully launch an attack?

- A. Indicators of compromise
- B. Key risk indicators
- C. Indicators of attack
- D. Indicators of exposure

Answer: C

Explanation:

Indicators of attack (IoA) provide information about the attacker's intent, end goals, and the actions they take to execute an attack. IoAs help identify the methods and behaviors an attacker uses during the attack lifecycle.

Unlike Indicators of Compromise (IoCs), which are used to detect evidence of a breach, IoAs are proactive and help in identifying and preventing potential attacks before they occur by analyzing the patterns and tactics used by attackers.

* Key risk indicators: Metrics used to signal increased risk exposure.

* Indicators of compromise: Artifacts observed on a network or in an operating system that with high confidence indicate a computer intrusion.

* Indicators of exposure: Data points or signals that reveal vulnerabilities or weaknesses that could be exploited.

References:

* EC-Council Certified Network Defender (CND) Study Guide

* Cybersecurity frameworks and documentation on threat detection

NEW QUESTION # 588

Which of the following is true regarding any attack surface?

- A. Decrease in risk exposures increases the attack surface
- B. Decrease in vulnerabilities decreases the attack surface
- C. Decrease in vulnerabilities increases the attack surface
- D. Increase in vulnerabilities decreases the attack surface

Answer: B

NEW QUESTION # 589

Docker provides Platform-as-a-Service (PaaS) through _____ and delivers containerized software packages.

- A. Server-level virtualization
- B. OS-level virtualization
- C. Storage-level virtualization
- D. Network-level virtualization

Answer: B

Explanation:

Docker provides Platform-as-a-Service (PaaS) through OS-level virtualization. This form of virtualization allows for the deployment of software in packages called containers. Containers are isolated from each other and bundle their own software, libraries, and configuration files; they can communicate with each other through well-defined channels. OS-level virtualization is lightweight compared to other forms of virtualization because it does not require a hypervisor to create virtual machines. Instead, the Docker Engine enables the containers to run directly within the host machine's operating system but with separate namespaces, which is why

it's considered OS- level.

NEW QUESTION # 590

Which of the following key features is used by TCP in order to regulate the amount of data sent by a host to another host on the network?

- A. Sequence number
- **B. Flow control**
- C. Congestion control
- D. TCP timestamp

Answer: B

Explanation:

Flow control is the process of regulating the amount of data sent by a host to another host on the network. The flow control mechanism controls packet flow so that a sender does not transmit more packets than a receiver can process. TCP uses a sliding window flow control protocol. In each TCP segment, the receiver specifies in the receive window field the amount of additional received data (in bytes) that it is willing to buffer for the connection. The sending host can send only up to that amount of data before it must wait for an acknowledgment and window update from the receiving host.

Answer option A is incorrect. TCP uses a sequence number for identifying each byte of data.

Answer option B is incorrect. TCP timestamp helps TCP to compute the round-trip time between the sender and receiver.

Answer option C is incorrect. Congestion control concerns controlling traffic entry into a telecommunications network, so as to avoid congestive collapse by attempting to avoid oversubscription of any of the processing or link capabilities of the intermediate nodes and networks and taking resource reducing steps, such as reducing the rate of sending packets. It should not be confused with flow control, which prevents the sender from overwhelming the receiver.

NEW QUESTION # 591

Which authorization lets users access a requested resource on behalf of others?

- **A. Implicit Authorization**
- B. Explicit Authorization
- C. Decentralized Authorization
- D. Centralized Authorization

Answer: A

Explanation:

Implicit Authorization is a type of authorization that allows users to access resources on behalf of others without the need for explicit permission from the resource owner each time. This is commonly implemented through OAuth, where a user grants a third-party application access to their information on another service without sharing their credentials. The application receives an access token that permits it to act on behalf of the user, accessing only what the user is authorized to access.

NEW QUESTION # 592

.....

We always put our customers in the first place. Thus we offer discounts from time to time, and you can get 50% discount at the second time you buy our 312-38 question dumps after a year. Lower price with higher quality, that's the reason why you should choose our 312-38 Prep Guide. All in all, our test-orientated high-quality 312-38 exam questions would be the best choice for you, we sincerely hope all of our candidates can pass 312-38 exam, and enjoy the tremendous benefits of our 312-38 prep guide.
