New Identity-and-Access-Management-Architect Dumps Ppt & Identity-and-Access-Management-Architect New Test Materials

In order to meet the different demands of the different customers, these experts from our company have designed three different versions of the Identity-and-Access-Management-Architect study materials. All customers have the right to choose the most suitable version according to their need after buying our study materials. The PDF version of the Identity-and-Access-Management-Architect Study Materials has many special functions, including download the demo for free, support the printable format and so on.

Salesforce Certified Identity and Access Management Architect certification exam is designed for professionals who want to showcase their expertise in the areas of identity and access management. Salesforce Certified Identity and Access Management Architect certification exam is widely recognized in the industry and is highly valued by employers. Identity-and-Access-Management-Architect Exam covers a wide range of topics related to identity and access management, including authentication and authorization protocols, identity federation, and access control.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q196-Q201):

NEW QUESTION # 196

Sales users at Universal containers use salesforce for Opportunity management. Marketing uses a third-party application called Nest for Lead nurturing that is accessed using username/password. The VP of sales wants to open up access to nest for all sales uses to provide them access to lead history and would like SSO for better adoption. Salesforce is already setup for SSO and uses

Delegated Authentication. Nest can accept username/Password or SAML-based Authentication. IT teams have received multiple password-related issues for nest and have decided to set up SSO access for Nest for Marketing users as well. The CIO does not want to invest in a new IDP solution and is considering using Salesforce for this purpose. Which are appropriate license type choices for sales and marketing users, giving salesforce is using Delegated Authentication?

Choose 2 answers

- A. Salesforce license for sales users and platform license for Marketing users.
- B. Salesforce license for sales users and External Identity license for Marketing users
- C. Salesforce license for sales users and Identity license for Marketing users
- D. Identity license for sales users and Identity connect license for Marketing users

Answer: A,C

NEW QUESTION # 197

Universal Containers (UC) employees have Salesforce access from restricted IP ranges only, to protect against unauthorized access. UC wants to rollout the Salesforce1 mobile app and make it accessible from any location.

Which two options should an architect recommend? Choose 2 answers

- A. Use login flow to bypass IP range restriction for the mobile app.
- B. Remove existing restrictions on IP ranges for all types of user access.
- C. Relax the IP restriction with a second factor in the connect app settings for Salesforce1 mobile app
- D. Relax the IP restriction in the connect app settings for the Salesforce1 mobile app

Answer: C,D

Explanation:

Relaxing the IP restriction in the connected app settings for the Salesforce1 mobile app and relaxing the IP restriction with a second factor in the connected app settings for Salesforce1 mobile app are two options that an architect should recommend. These options allow UC employees to access the Salesforce1 mobile app from any location, while still maintaining some level of security. Relaxing the IP restriction means that users can log in to the connected app from outside the trusted IP ranges defined in their profiles¹.

Adding a second factor means that users need to provide an additional verification method, such as a verification code or a security key, to access the app². Using a login flow to bypass IP range restriction for the mobile app is not a recommended option because it can create a complex and inconsistent user experience³. Removing existing restrictions on IP ranges for all types of user access is not a recommended option because it can expose UC's data and applications to unauthorized access⁴. References: 1: Restrict Access to Trusted IP Ranges for a Connected App 2: Require Multi-Factor Authentication for Connected Apps 3: [Custom Login Flows]

4:

[Restrict Login Access by IP Address]

NEW QUESTION # 198

Universal Containers (UC) uses Active Directory (AD) as their identity store for employees and must continue to do so for network access. UC is undergoing a major transformation program and moving all of their enterprise applications to cloud platforms including Salesforce, Workday, and SAP HANA. UC needs to implement an SSO solution for accessing all of the third-party cloud applications and the CIO is inclined to use Salesforce for all of their identity and access management needs.

Which two Salesforce license types does UC need for its employees'

Choose 2 answers

- A. Salesforce and Identity Connect licenses
- B. Identity and Identity Connect licenses
- C. Company Community and Identity licenses
- D. Chatter Only and Identity licenses

Answer: A,B

Explanation:

Explanation

The two Salesforce license types that UC needs for its employees are Identity and Identity Connect licenses.

According to the Salesforce documentation, "Identity licenses let your employees access any app that supports standards-based single sign-on (SSO). Identity Connect licenses let you integrate your Active Directory with Salesforce." Therefore, option B and D are the correct answers. References: [Identity Licenses]

NEW QUESTION # 199

Universal Containers (UC) has built a custom based Two-factor Authentication (2FA) system for their existing on-premise applications. They are now implementing Salesforce and would like to enable a Two-factor login process for it, as well. What is the recommended solution an architect should consider?

- A. Use custom login flows to connect to the existing custom 2FA system for use in Salesforce.
- B. Replace the custom 2FA system with an app exchange app that supports on-premise applications and Salesforce.
- C. Replace the custom 2FA system with Salesforce 2FA for on-premise application and Salesforce.
- D. Use the custom 2FA system for on-premise applications and native 2FA for Salesforce.

Answer: A

NEW QUESTION # 200

An identity architect's client has a homegrown identity provider (IdP). Salesforce is used as the service provider (SP). The head of IT is worried that during a SP initiated single sign-on (SSO), the Security Assertion Markup Language (SAML) request content will be altered.

What should the identity architect recommend to make sure that there is additional trust between the SP and the IdP?

- A. Ensure that there is an HTTPS connection between IDP and SP.
- B. Ensure that on the SSO settings page, the "Request Signing Certificate" field has a self-signed certificate.
- C. Ensure that the Issuer and Assertion Consumer service (ACS) URL is properly configured between SP and IDP.
- D. Encrypt the SAML Request using certification authority (CA) signed certificate and decrypt on IdP.

Answer: D

Explanation:

Explanation

Encrypting the SAML Request using a CA signed certificate and decrypting it on the IdP ensures that the request content is not altered or tampered with during transit. This also adds an extra layer of security and trust between the SP and the IdP. References: SAML Single Sign-On Overview, SAML Assertion Encryption
