# 100% Pass Quiz 2026 Nutanix Valid NCP-US-6.5: Examcollection Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Dumps Torrent

BONUS!!! Download part of Real4exams NCP-US-6.5 dumps for free: https://drive.google.com/open?id=1DebxFDyNVh2LI3tbJMmIsy-EiDRN1XPM

In order to make your exam easier for every candidate, our NCP-US-6.5 exam prep is capable of making you test history and review performance, and then you can find your obstacles and overcome them. In addition, once you have used this type of NCP-US-6.5 exam question online for one time, next time you can practice in an offline environment. The NCP-US-6.5 Test Torrent can be used for multiple clients of computers and mobile phones to study online, as well as to print and print data for offline consolidation. And we are pleased to suggest you to choose our NCP-US-6.5 exam question for your exam.

Real4exams is one of the trusted and reliable platforms that is committed to offering quick NCP-US-6.5 exam preparation. To achieve this objective Real4exams is offering valid, updated, and Real NCP-US-6.5 Exam Questions. These Real4exams Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) exam dumps will provide you with everything that you need to prepare and pass the final NCP-US-6.5 exam with flying colors.

>> Examcollection NCP-US-6.5 Dumps Torrent <<

NCP-US-6.5 Latest Test Testking, NCP-US-6.5 Test Sample Questions

Nowadays passing the test NCP-US-6.5 certification is extremely significant for you and can bring a lot of benefits to you. Passing the NCP-US-6.5 test certification does not only prove that you are competent in some area but also can help you enter in the big company and double your wage. Buying our NCP-US-6.5 Study Materials can help you pass the test easily and successfully. And at the same time, you don't have to pay much time on the preparation for our NCP-US-6.5 learning guide is high-efficient.

Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q92-Q97):

NEW QUESTION # 92
After configuring Smart DR, an administrator is unable to see the policy in the Policies tab. The administrator has confirmed that all FSVMs are able to connect to Prism Central via port 9440 bidirectionally. What is the possible reason for this issue?

- A. The primary and recovery file servers do not have the same version.
- B. Port 7515 should be open for all Internal/Storage IPs of FSVMs on the Source and Target cluster.
- C. Port 7515 should be open for all External/Client IPs of FSVMs on the Source and Target cluster.

- D. The primary and recovery file servers do not have the same protocols.

Answer: A

Explanation:
Smart DR in Nutanix Files, part of Nutanix Unified Storage (NUS), is a disaster recovery (DR) solution that simplifies the setup of replication policies between file servers (e.g., using NearSync, as seen in Question 24).
After configuring a Smart DR policy, the administrator expects to see it in the Policies tab in Prism Central, but it is not visible despite confirmed connectivity between FSVMs and Prism Central via port 9440 (used for Prism communication, as noted in Question 21). This indicates a potential mismatch or configuration issue.
Analysis of Options:
* Option A (The primary and recovery file servers do not have the same version): Correct. Smart DR requires that the primary and recovery file servers (source and target) run the same version of Nutanix Files to ensure compatibility. If the versions differ (e.g., primary on Files 4.0, recovery on Files 3.8), the Smart DR policy may fail to register properly in Prism Central, resulting in it not appearing in the Policies tab. This is a common issue in mixed-version environments, as Smart DR relies on consistent features and APIs across both file servers.
* Option B (Port 7515 should be open for all External/Client IPs of FSVMs on the Source and Target cluster): Incorrect. Port 7515 is not a standard port for Nutanix Files or Smart DR communication. The External/Client network of FSVMs (used for SMB/NFS traffic) communicates with clients, not between FSVMs or with Prism Central for policy management. Smart DR communication between FSVMs and Prism Central uses port 9440 (already confirmed open), and replication traffic between FSVMs typically uses other ports (e.g., 2009, 2020), but not 7515.
* Option C (The primary and recovery file servers do not have the same protocols): Incorrect.
Nutanix Files shares can support multiple protocols (e.g., SMB, NFS), but Smart DR operates at the file server level, not the protocol level. The replication policy in Smart DR replicates share data regardless of the protocol, and a protocol mismatch would not prevent the policy from appearing in the Policies tab-it might affect client access, but not policy visibility.
* Option D (Port 7515 should be open for all Internal/Storage IPs of FSVMs on the Source and Target cluster): Incorrect. Similar to option B, port 7515 is not relevant for Smart DR or Nutanix Files communication. The Internal/Storage network of FSVMs is used for communication with the Nutanix cluster's storage pool, but Smart DR policy management and replication traffic do not rely on port
7515. The key ports for replication (e.g., 2009, 2020) are typically already open, and the issue here is policy visibility, not replication traffic.
Why Option A?
Smart DR requires compatibility between the primary and recovery file servers, including running the same version of Nutanix Files. A version mismatch can cause the Smart DR policy to fail registration in Prism Central, preventing it from appearing in the Policies tab. Since port 9440 connectivity is already confirmed, the most likely issue is a version mismatch, which is a common cause of such problems in Nutanix Files DR setups.
Exact Extract from Nutanix Documentation:
From the Nutanix Files Administration Guide (available on the Nutanix Portal):
"Smart DR requires that the primary and recovery file servers run the same version of Nutanix Files to ensure compatibility. A version mismatch between the source and target file servers can prevent the Smart DR policy from registering properly in Prism Central, resulting in the policy not appearing in the Policies tab."
:
Nutanix Files Administration Guide, Version 4.0, Section: "Smart DR Configuration Requirements" (Nutanix Portal).
Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix Files Disaster Recovery".============

NEW QUESTION # 93
After configuring Smart DR, an administrator is unable see the policy in the Policies tab. The administrator has confirmed that all FSVMs are able to connect to Prism Central via port 9440 bidirectional.
What is the possible reason for this issue?

- A. Port 7575 should be open for all Internal/Storage IPs of FSVMs on the Source and Target.
- B. The primary and recovery file servers do not have the same version.
- C. The primary and recovery file servers do not have the same protocols.
- D. Port 7575 should be open for all External/Client IPS of FSVMs on the Source and Target cluster.

Answer: D

Explanation:
Smart DR is a feature that allows share-level replication between active file server instances for disaster recovery. To configure

Smart DR, one of the prerequisites is to open TCP port 7575 for all External/Client IPs of FSVMs on the Source and Target cluster. This port is used for communication between the FSVMs and Prism Central. If this port is not open, Smart DR policies will not be visible in the Policies tab in Prism Central. Reference: Nutanix Files Administration Guide, page 79; Nutanix Files Solution Guide, page 9

NEW QUESTION # 94

An administrator is attempting to create a share that will provide user access via SMB and NFS. However, the Enable multiprosotocol accounts for NFS clients settings is not available.
What would cause this issue?

- A. The connection to Active Directory has not been configured.
- B. NFS configured to use unmanaged authentication.
- C. The incorrect Files license has been applied.
- D. The file server instance was only configured with SMB.

Answer: A

Explanation:
The cause of this issue is that the connection to Active Directory has not been configured. Active Directory is a service that provides centralized authentication and authorization for Windows-based clients and servers. To create a share that will provide user access via SMB and NFS, the administrator must first configure the connection to Active Directory in the Files Console. This will allow the administrator to enable multiprotocol accounts for NFS clients, which are accounts that map NFS users to SMB users and groups for consistent access control across both protocols. Reference: Nutanix Files Administration Guide, page 32; Nutanix Files Solution Guide, page 6

NEW QUESTION # 95

Deploying Files instances require which two minimum resources? (Choose two)

- A. 8 vCPUs per host
- B. 8 GiB of memory per host
- C. 4 vCPUs per host
- D. 12 GiB of memory per host

Answer: B,C

Explanation:
The two minimum resources that are required for deploying Files instances are 8 GiB of memory per host and 4 vCPUs per host. Memory and vCPUs are resources that are allocated to VMs (Virtual Machines) to run applications and processes. Files instances are file server instances (FSIs) that run on FSVMs (File Server VMs) on a Nutanix cluster. FSVMs require at least 8 GiB of memory and 4 vCPUs per host to function properly and provide SMB and NFS access to file shares and exports. The administrator should ensure that there are enough memory and vCPUs available on each host before deploying Files instances. Reference: Nutanix Files Administration Guide, page 27; Nutanix Files Solution Guide, page 6

NEW QUESTION # 96

An administrator has been tasked with creating a distributed share on a single-node cluster, but has been unable to successfully complete the task.
Why is this task failing?

- A. Distributed shares require multiple nodes.
- B. Number of distributed shares limit reached.
- C. File server version should be greater than 3.8.0
- D. AOS version should be greater than 6.0.

Answer: A

Explanation:
A distributed share is a type of SMB share or NFS export that distributes the hosting of top-level directories across multiple FSVMs, which improves load balancing and performance. A distributed share cannot be created on a single-node cluster, because

there is only one FSVM available. A distributed share requires at least two nodes in the cluster to distribute the directories. Therefore, the task of creating a distributed share on a single-node cluster will fail. References: Nutanix Files Administration Guide, page 33; Nutanix Files Solution Guide, page 8 A distributed share in Nutanix Files, part of Nutanix Unified Storage (NUS), is a share that spans multiple File Server Virtual Machines (FSVMs) to provide scalability and high availability. Distributed shares are designed to handle large-scale workloads by distributing file operations across FSVMs.
Analysis of Options:
* Option A (File server version should be greater than 3.8.0): Incorrect. While Nutanix Files has version-specific features, distributed shares have been supported since earlier versions (e.g., Files 3.5).
The failure to create a distributed share on a single-node cluster is not due to the Files version.
* Option B (Distributed shares require multiple nodes): Correct. Distributed shares in Nutanix Files require a minimum of three FSVMs for high availability and load balancing, which in turn requires a cluster with at least three nodes. A single-node cluster cannot support a distributed share because it lacks the necessary nodes to host multiple FSVMs, which are required for the distributed architecture.
* Option C (AOS version should be greater than 6.0): Incorrect. Nutanix AOS (Acropolis Operating System) version 6.0 or later is not a specific requirement for distributed shares. Distributed shares have been supported in earlier AOS versions (e.g., AOS 5.15 and later with compatible Files versions). The issue is related to the cluster's node count, not the AOS version.
* Option D (Number of distributed shares limit reached): Incorrect. The question does not indicate that the administrator has reached a limit on the number of distributed shares. The failure is due to the single-node cluster limitation, not a share count limit.
Why Option B?
A single-node cluster cannot support a distributed share because Nutanix Files requires at least three FSVMs for a distributed share, and each FSVM typically runs on a separate node for high availability. A single-node cluster can support a non-distributed (standard) share, but not a distributed share, which is designed for scalability across multiple nodes.
Exact Extract from Nutanix Documentation:
From the Nutanix Files Administration Guide (available on the Nutanix Portal):
"Distributed shares in Nutanix Files require a minimum of three FSVMs to ensure scalability and high availability. This requires a cluster with at least three nodes, as each FSVM is typically hosted on a separate node. Single-node clusters do not support distributed shares due to this requirement."

Nutanix Files Administration Guide, Version 4.0, Section: "Distributed Shares Requirements" (Nutanix Portal).
Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix Files Share Types".

NEW QUESTION # 97

......

The clients only need 20-30 hours to learn the NCP-US-6.5 exam questions and prepare for the test. Many people may complain that we have to prepare for the NCP-US-6.5 test but on the other side they have to spend most of their time on their most important things such as their jobs, learning and families. But if you buy our NCP-US-6.5 Study Guide you can both do your most important thing well and pass the test easily because the preparation for the test costs you little time and energy.

NCP-US-6.5 Latest Test Testking: https://www.real4exams.com/NCP-US-6.5_braindumps.html

Of course, you can also realize your dream with the aid of our NCP-US-6.5 exam quiz, If you don't get Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 training material in your email, please you check your junk-box to see if NCP-US-6.5 study dumps is there sometimes, When you complete your payment, you will receive an email attached with NCP-US-6.5 practice pdf, then you can instantly download it and install on your phone or computer for study, Nutanix Examcollection NCP-US-6.5 Dumps Torrent It is a portable format that works on all smart devices.

Build your own application from scratch, In the next several articles, I'm going to tell you much more about each of these topics, Of course, you can also realize your dream with the aid of our NCP-US-6.5 Exam Quiz.

Pass Guaranteed Quiz 2026 NCP-US-6.5: Reliable Examcollection Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Dumps Torrent

If you don't get Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 training material in your email, please you check your junk-box to see if NCP-US-6.5 study dumps is there sometimes, When you complete your payment, you will receive an email attached with NCP-US-6.5 practice pdf, then you can instantly download it and install on your phone or computer for study.

It is a portable format that works on all smart NCP-US-6.5 devices, For this very question, Real4exams imparts you confidence by offering an exam success with 100% money back guarantee on all its products such as NCP-US-6.5 real Questions and Answers, NCP-US-6.5 Lab Exam and NCP-US-6.5 VCE Exams.
