Our company is trying to satisfy every customer's demand. Of course, we also attach great importance on the quality of our API-936 real exam. Every product will undergo a strict inspection process. In addition, there will have random check among different kinds of API-936 Study Materials. The quality of our API-936 practice dumps deserves your trust.our products have built good reputation in the market. We sincerely hope that you can try our API-936 preparation guide.

There are various individuals who have never shown up for the Refractory Personnel certification test as of now. They know close to nothing about the Refractory Personnel exam model and how to attempt the requests. API API-936 Dumps give an unequivocal thought of the last preliminary of the year model and how a promising rookie ought to attempt the solicitation paper to score well.

API-936 Official Study Guide | API-936 Exam Objectives

However, when asked whether the API-936 latest dumps are reliable, costumers may be confused. For us, we strongly recommend the API-936 exam questions compiled by our company, here goes the reason. On one hand, our API-936 test material owns the best quality. When it comes to the study materials selling in the market, qualities are patchy. But our API test material has been

recognized by multitude of customers, which possess of the top-class quality, can help you pass exam successfully. On the other hand, our API-936 Latest Dumps are designed by the most experienced experts, thus it can not only teach you knowledge, but also show you the method of learning in the most brief and efficient ways.

API Refractory Personnel Sample Questions (Q11-Q16):

NEW QUESTION # 11

Which of the following is the term for aggregate and/or cement that bounces away from a surface against which refractory is being projected by gunning?

- A. Slurry
- B. Overspray
- C. Trimmings
- D. Rebound

Answer: D

Explanation:

The term "rebound" is officially defined in API Std 936 as follows:

"Rebound: That portion of a refractory that does not adhere to the surface and falls away when a material is applied by gunning."
- API Std 936, Section 3, Definitions

This makes "rebound" the precise and correct term describing the material that fails to adhere during gunning.

The other options, such as "slurry," refer to different material states or applications, and "trimmings" or "overspray" are not used with this specific meaning in the standard.

NEW QUESTION # 12

Which function of refractories is to resist temperature?

- A. Secondary function
- B. Tertiary function
- C. None of the above
- D. Primary function

Answer: D

NEW QUESTION # 13

For modules of rupture test of brick and shapes, the preferred test specimen shall be standard

- A. 200 x 150 x 76mm
- B. 150 x 114 x 76mm
- C. 228 x 114 x 64 or 76mm
- D. None of the above

Answer: C

NEW QUESTION # 14

Surface preparation and welding procedures are the responsibility of the:

- A. Manufacturer.
- B. Contractor.
- C. Inspector.
- D. Owner.

Answer: B

Explanation:

According to API Std 936 - Refractory Installation Quality Control, the roles and responsibilities of each party are clearly defined. Specifically, it states:

"The contractor shall be responsible for... the preparation of the surface prior to lining, and the quality of the workmanship, including the welding of anchors and any required preheat or post-weld heat treatment."

- API Std 936, Section 5.3.1, Contractor Responsibilities

Therefore, surface preparation and welding activities, including anchor welding, fall under the Contractor's scope of work. The inspector's role is to verify compliance, not to execute procedures.

NEW QUESTION # 15

The lining surface should remain uncovered and free from contact with moisture during the curing period for what type of refractory?

- A. Chemically bonded
- B. Ceramic bonded
- C. Cement bonded
- D. Hydraulic bonded

Answer: A

Explanation:

Chemically bonded refractories, such as phosphate-bonded or acid-bonded types, develop strength through chemical reactions that require exposure to ambient air. These materials must remain uncovered and dry during curing, as moisture or covering may inhibit the required chemical bonding or lead to improper set.

Covering chemically bonded linings (e.g., with plastic sheeting or wet burlap) - practices appropriate for hydraulic bonded(cement-based) refractories - would trap moisture and interfere with the chemical reaction process in chemical bonds.

Reference:

API TR 980 -Monolithic Refractories: Installation and Dryout, Section on Chemically Bonded Refractories:

"Do not cover chemically bonded castables during the curing period. Keep surfaces exposed to air."

NEW QUESTION # 16

.....

Our API-936 study materials can satisfy the wishes of our customers for high-efficiency and client only needs to spare little time to prepare for the API-936 test and focus their main attentions on their major things. As a leader in the career, we have been studying and doing researching on the API-936 Practice Braindumps for over ten year. We have helped tens of thousands of the candidates successfully passed the exam and achieved their dreams.
