

100% Pass Salesforce - The Best Valid Plat-Dev-210 Mock Test

Our Plat-Dev-210 useful test guide materials present the most important information to the clients in the simplest way so our clients need little time and energy to learn our Plat-Dev-210 useful test guide. The clients only need 20-30 hours to learn and prepare for the test. For those people who are busy in their jobs, learning or other things this is a good news because they needn't worry too much that they don't have enough time to prepare for the test and can leisurely do their main things and spare little time to learn our Plat-Dev-210 study practice guide. So it is a great advantage of our Plat-Dev-210 exam materials and a great convenience for the clients.

Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Integration Procedures: This section measures the skills of an Integration Architect and involves designing and configuring Integration Procedures to automate processes and integrate systems. It requires comparing and contrasting different elements and configurations within Integration Procedures to meet specific use cases. Candidates are also tested on selecting the correct elements and properties to satisfy functional requirements, ensuring seamless data flow and process automation.
Topic 2	<ul style="list-style-type: none">OmniScripts: This portion of the exam measures the skills of a Business Analyst and focuses on the use of OmniScripts to create dynamic, guided user experiences. It includes comparing and contrasting various OmniScript elements and their configurations to fulfill given use cases. The section also examines the candidate's understanding of the JSON structure that supports OmniScripts, as well as the ability to select appropriate elements and properties to address functional requirements effectively.
Topic 3	<ul style="list-style-type: none">Expression Sets & Decision Matrices: This section measures the skills of a Logic Designer and covers the configuration and application of Expression Sets and Decision Matrices within OmniStudio tools. It requires demonstrating an understanding of how Expression Sets evaluate conditions and how Decision Matrices use rule-based logic to determine outcomes. This knowledge is essential for automating decisions and streamlining complex business processes.

Topic 4	<ul style="list-style-type: none"> • Omnistudio Data Mappers: This part of the exam measures the skills of a Data Engineer and focuses on the use of Omnistudio Data Mappers for extracting, transforming, and loading data. It includes identifying the appropriate Data Mapper for a given requirement, as well as determining the necessary Extract, Load, Transform, and Turbo Extract functionalities based on specific use cases. This section ensures the candidate can effectively map and manipulate data to support business processes.
Topic 5	<ul style="list-style-type: none"> • Flexcards: This section of the exam measures the skills of a Solution Architect and covers the ability to design and configure FlexCards based on specific business requirements. It evaluates the candidate's knowledge in selecting appropriate card styles, defining data sources and fields, and implementing user actions across different card states. Additionally, this domain tests the understanding of constructing the underlying JSON data structure that powers the FlexCards framework, ensuring that the configured cards meet both functional and technical specifications.

Test Plat-Dev-210 Centres, Plat-Dev-210 Exam Answers

It is very convenient for all people to use the Plat-Dev-210 study materials from our company. Our study materials will help a lot of people to solve many problems if they buy our products. The online version of Plat-Dev-210 study materials from our company is not limited to any equipment, which means you can apply our study materials to all electronic equipment, including the telephone, computer and so on. So the online version of the Plat-Dev-210 Study Materials from our company will be very useful for you to prepare for your exam. We believe that our Plat-Dev-210 study materials will be a good choice for you.

Salesforce Certified Omnistudio Developer Sample Questions (Q94-Q99):

NEW QUESTION # 94

A developer needs to build a DataRaptor Transform to send current weather to both an OmniScript Card Layout. Which of these samples would be valid for the Expected Output JSON?

- A. 

```

{
  "Current": {
    "TempF": 53.1,
    "CityState": "Baltimore, MD",
    "TempC": 14.6
  }
}

```
- B. 

```

{
  "Current": {
    "TempF": 53.1,
    "CityState": "Baltimore, MD",
    "TempC": 14.6
  }
}

```
- C. 

```

<root>
  <Current>
    <TempF>53.1</TempF>
    <CityState>Baltimore, MD</CityState>
    <TempC>14.6</TempC>
  </Current>

```
- D. 

```

<root>
  <Current>
    <TempF>53.1</TempF>
    <CityState>Baltimore, MD</CityState>
    <TempC>14.6</TempC>
  </Current>

```

Answer: C

Explanation:

According to the Transform External Data Unit, the Expected Output JSON should match the Output Path of the DataRaptor Transform. In option D, the Output Path is Current:CityState, which matches the Expected Output JSON. The other options have different Output Paths that do not match the Expected Output JSON.

Therefore, the correct answer is D.

NEW QUESTION # 95

Which two fields in an Integration Procedure or Data Mapper can execute a function like CONCAT or DATEDIFF?

Choose 2 answers

- A. In a Data Mapper in an Output Tab Output JSON Path
- B. In a Set Values Action in a Value field
- C. In a Remote Action in an Additional Output value field
- D. In a Data Mapper Action in an Input Parameters value field

Answer: B,D

Explanation:

Functions like CONCAT, DATEDIFF, and IF are supported in value fields where expressions can be parsed at runtime.

* B. In a Set Values Action in a Value field - Correct. The Set Values element supports expression functions in its Value field, allowing for real-time evaluation during IP execution.

* C. In a Data Mapper Action in an Input Parameters value field - Correct. Input Parameters to DataRaptors in Integration Procedures can use expression logic to dynamically compute and pass values.

Incorrect Options:

- * A. Output JSON Path in DataRaptor is for structural mapping, not function execution.
- * D. Remote Action Output fields typically receive data, not compute it.

:

Salesforce OmniStudio Developer Guide # Expression Functions in Integration Procedures

NEW QUESTION # 96

A developer builds a new OmniScript. It contains a Set Values element with a ContextId key/value pair that was used during testing. What should the developer do before moving the OmniScript to a production org?

- A. Update the ContextId value to specify an id from the Production org.
- B. Add a Show/Hide condition on the Set Values element.
- C. Deactivate the contextId key/value pair
- D. Delete or Deactivate the Set Values element.

Answer: D

Explanation:

The Set Values element with a ContextId key/value pair was used for testing purposes and is not needed for production. The developer should delete or deactivate the Set Values element before moving the OmniScript to a production org.

NEW QUESTION # 97

A developer needs to retrieve data from an external system that stores policy data. The external system supports REST APIs to access and update the policies. Due to the volume of the policy data and peak hours of business, calls to the REST APIs sometimes take longer than expected to respond.

The developer creates an Integration Procedure to retrieve the policy data for use in an OmniScript.

Given the external system's known performance issues, which configuration should be used to implement the call to the external system?

Choose 2 answers

- A. Check the Chainable checkbox on the integration procedure Action in the OmniScript
- B. Configure a Remote action with timeout settings of 120000
- C. Check the Chain on Step Check on the HTTP Action in the Integration Procedure

- D. Set the Timeout property on the HTTP Action in the Integration Procedure

Answer: C,D

Explanation:

Setting the Timeout property on the HTTP Action in the Integration Procedure allows the developer to specify how long to wait for a response from the external system before timing out. Checking the Chain on Step Check on the HTTP Action in the Integration Procedure allows the developer to chain multiple HTTP Actions together and execute them sequentially. Configuring a Remote action with timeout settings of 120000 is not necessary, as it is already done by default in OmniStudio. Checking the Chainable checkbox on the integration procedure Action in the OmniScript has no effect on calling an external system.

NEW QUESTION # 98

A developer needs to configure a DataRaptor to retrieve data from a single object. The structure of the output data does not need to be changed.

Following best practices, which type of DataRaptor should the developer use?

- A. DataRaptor Load
- B. DataRaptor Extract
- C. DataRaptor Turbo Extract
- D. DataRaptor Transform

Answer: C

Explanation:

A DataRaptor Turbo Extract is a simplified version of a DataRaptor Extract that can retrieve data from a single object without changing the structure of the output data. It is suitable for this scenario because the developer does not need to transform or load the data.

NEW QUESTION # 99

.....

GuideTorrent offers the Plat-Dev-210 exam questions in a convenient PDF format, allowing you to easily download them on your PC, laptop, Mac, tablet, or smartphone. With this accessibility, you can access the Salesforce Plat-Dev-210 PDF questions anytime and from anywhere. Having all the information about the Salesforce Certified Omnistudio Developer (Plat-Dev-210) Exam at your fingertips enhances your studying experience, making it easier and more effective, whether you're at home or on the go.
