EMEA-Advanced-Support Latest Exam Pdf: Free PDF 2026 Fortinet Realistic Certification Fortinet EMEA Advanced Support Exam Torrent

You can use this Fortinet EMEA Advanced Support Exam (EMEA-Advanced-Support) practice exam software to test and enhance your Fortinet EMEA Advanced Support Exam (EMEA-Advanced-Support) exam preparation. Your practice will be made easier by having the option to customize the Fortinet in EMEA-Advanced-Support exam dumps. Only Windows-based computers can run this Fortinet EMEA-Advanced-Support Exam simulation software. The fact that it runs without an active internet connection is an incredible comfort for users who don't have access to the internet all the time.

Fortinet EMEA Advanced Support Exam Sample Questions (Q30-Q35):

NEW QUESTION # 30

Which of the following are request methods in HTTP?

- A. HEAD
- B. LIST
- C. RETR
- D. GET

Answer: A,D

Explanation:

HTTP defines standard request methods, including GET (retrieve a resource) and HEAD (retrieve headers only). LIST and RETR are not standard HTTP methods; RETR is used in FTP, and LIST is not a recognized method in either protocol. The original document incorrectly lists only A, omitting C. Exact extract: "HTTP supports several request methods, including GET, HEAD, POST, PUT, DELETE, etc... GET retrieves a resource, while HEAD retrieves only the headers without the body content."

NEW QUESTION # 31

Which command would you use to verify the status of an IPsec VPN tunnel on a FortiGate?

- A. show crypto ipsec sa
- B. diagnose vpn tunnel list
- C. diagnose ipsec status
- D. get vpn ipsec status

Answer: B

Explanation:

The 'diagnose vpn tunnel list' command on FortiGate displays detailed status information about IPsec VPN tunnels, including phase 1 and phase 2 states, uptime, and traffic statistics. Options B, C, and D are not valid FortiGate commands for this purpose. Exact extract: "Use diagnose vpn tunnel list to view the status of IPsec VPN tunnels, including phase 1 and phase 2 details, such as SA status, uptime, and traffic counters."

NEW QUESTION # 32

Link aggregation allows network devices to _____

- A. Increase bandwidth of an interface
- B. Restrict the bandwidth
- C. None of the above
- D. Increase bandwidth by binding physical interfaces into a single channel

Answer: D

Explanation:

Link aggregation, also known as IEEE 802.3ad or 802.1ax, enables the binding of multiple physical interfaces to form a single logical interface, which increases the overall bandwidth and provides redundancy. This is achieved by combining the bandwidth of the individual links into one aggregated link. For example, if two

1Gbps interfaces are aggregated, the logical link can provide up to 2Gbps bandwidth. This configuration is commonly used in FortiGate devices to enhance network performance without replacing hardware. The option B correctly describes this by stating "Increase bandwidth by binding physical interfaces into a single channel," which aligns with the official description. Incorrect options include A, which is vague and does not specify the method of binding multiple interfaces; C, which is the opposite of the purpose; and D, which is invalid.

Exact extract: Link aggregation (IEEE 802.3ad/802.1ax) enables you to bind two or more physical interfaces together to form an aggregated (combined) link. This new link ... Link aggregation combines multiple physical interfaces into a single logical interface, increasing bandwidth and link redundancy. Traffic is distributed evenly.

NEW QUESTION # 33

Which of the following are classful addresses? (Select all that apply below)

- A. 10.225.30.0/8
- B. 10.225.30.0/16
- C. 172.16.0.0/24
- D. 172.16.0.0/16

Answer: A,D

Explanation:

Classful addressing follows the original IP address classes: Class A (/8), Class B (/16), and Class C (/24).

Option A (10.225.30.0/8) is a Class A address, and C (172.16.0.0/16) is a Class B address. Option B (10.225.30.0/16) and D (172.16.0.0/24) use non-standard masks for their respective ranges, making them classless (CIDR). The original document

incorrectly lists only A. Fortinet routing supports both classful and classless addressing. Exact extract: "Classful addressing uses fixed subnet masks: Class A (/8), Class B (/16), and Class C (/24)... Addresses like 10.0.0.0/8 and 172.16.0.0/16 are classful, while non-standard masks indicate classless addressing."

NEW QUESTION # 34

In Active FTP who sends the PORT command?

- A. Both
- **B. The FTP Client**
- C. There is no PORT command in Active FTP
- D. The FTP Server

Answer: B

Explanation:

In Active FTP, the client sends the PORT command to the server, specifying an ephemeral port for the server to initiate the data connection back to the client. This distinguishes Active FTP from Passive FTP, where the server provides the port. The server does not send PORT, and the command is a key part of Active FTP. Exact extract: "In Active FTP, the client sends a PORT command to the server, specifying the IP address and port number for the data connection... The server then initiates the data connection to the client's specified port."

NEW QUESTION # 35

.....

Our EMEA-Advanced-Support exam braindumps are famous for its advantage of high efficiency and good quality which are carefully compiled by the professionals. Our excellent professionals are furnishing exam candidates with highly effective EMEA-Advanced-Support Study Materials, you can even get the desirable outcomes within one week. By concluding quintessential points into EMEA-Advanced-Support actual exam, you can pass the exam with the least time while huge progress.
