**Answer: C,D**

#### NEW QUESTION # 62

After installing salesforce CPQ in your customer Sandbox org you notice unacceptableperformance times as the primary quote syncs to theopportunity its determined thecause for sub optimal performance is attribute to 30 process builders referencing thequote and opportunity along with other heavy customization that was previously created. what strategy should the revenue cloud consultant recommend to the customer?

- A. Architect the revenue cloud solution to follow suit by
- B. extending customization using coding best practices to improve scalability
- C. baseline current performance recommend to identify and address the technical debt first before designing the revenue cloud solution categorize the subpar customizations as 'out of scope'.processed with design and build,and address performance issues as the final taskin UAT
- D. upgrade the org to the latest CPQ and billing release,this will largely address the performance issues

**Answer: B**

#### NEW QUESTION # 63

During user acceptance testing (UAT) a tester submitsan incident because the invoicetotal did not match the expected results. Which 3 types of information should be includedin the description of the incident and a quick resolution?

- A. steps to replace issue
- B. Expected results
- C. description of new requirements that will help fix the issue
- D. quote number ordernumber or invoice number
- E. expected resolution date

**Answer: A,B,D**

Explanation:

During User Acceptance Testing (UAT), when an incident is submitted due to a discrepancy in the invoice total, the following information should be included in the description of the incident for a quick resolution:

BQuote number, order number, or invoice number: This information is crucial as it helps identify the specific transaction that has caused the issue<sup>1</sup>.

D) Steps to reproduce the issue: Providing a clear and detailed step-by-step process to reproduce the issue is essential. This allows the team to understand the exact scenario under which the issue occurs, making it easier to diagnose and resolve<sup>1</sup>.

E) Expected results: Clearly stating what the expected results should be provides a benchmark against which the actual results can be compared. This helps in understanding the deviation and the impact of the issue<sup>1</sup>.

#### NEW QUESTION # 64

An Invoice Scheduler is set up with Target Date = January 15 and Bill Usage Charges = False. Which setting will generate invoice lines?

- A. Order Products with Next Billing Date equal to or earlier than January 15
- B. Order Products with Next Billing Date equal to or after January 15
- C. Usage Summaries with Next Billing Date equal to or earlier than January 15
- D. Order Products with Next Charge Date equal to or earlier January 15

**Answer: A**

Explanation:

In Salesforce Revenue Cloud, an Invoice Scheduler is used to automate the generation of invoices for billable order products. The Invoice Scheduler uses an Invoice Run to evaluate when and if an Order Product gets invoiced<sup>1</sup>.

When the Invoice Scheduler is set up with a Target Date (e.g., January 15) and Bill Usage Charges is set to False, it will generate invoice lines for Order Products with a Next Billing Date that is equal to or earlier than the Target Date<sup>1</sup>. This is because the Invoice Run is looking for eligible Order Products that match its criteria, which in this case would be Order Products with a Next Billing Date on or before the Target Date<sup>1</sup>.

It's important to note that the Invoice Scheduler kicks off Invoice Runs when it hits the start time that you specify. For example, if you have a monthly Invoice Scheduler that runs on the 15th of every month, it will generate invoices for all Order Products with a Next Billing Date of January 15 or earlier<sup>1</sup>.
