## Exam Vce Chrome-Enterprise-Administrator Free | Chrome-Enterprise-Administrator Reliable Guide Files

Do you want to earn the Google Chrome-Enterprise-Administrator certification to land a well-paying job or a promotion? Prepare with Chrome-Enterprise-Administrator real exam questions to crack the test on the first try. We offer our Professional Chrome Enterprise Administrator Certification Exam (Chrome-Enterprise-Administrator) Dumps in the form of a real Chrome-Enterprise-Administrator Questions PDF file, a web-based Google Chrome-Enterprise-Administrator Practice Questions, and Chrome-Enterprise-Administrator desktop practice test software. Now you can clear the Professional Chrome Enterprise Administrator Certification Exam test in a short time without wasting time and money with actual Chrome-Enterprise-Administrator questions of ITPassLeader.

## Google Professional Chrome Enterprise Administrator Certification Exam Sample Questions (Q51-Q56):

### NEW QUESTION # 51

When a Chrome browser under cloud management goes to a potentially risky website, that action is logged in the Audit and Investigation Report as what type of event?"

- A. SSL Error
- B. Site Warning Unsafe Site Visit
- C. Untrusted Site Visit
- D. Site Isolation Violation

**Answer: B**

Explanation:

When Chrome's Safe Browsing feature identifies a website as potentially risky and displays a warning page that the user might bypass to visit the site, this interaction is typically logged in the Audit and Investigation Report as a "Site Warning Unsafe Site Visit" event. This allows administrators to track instances where users might be exposed to potentially malicious content despite browser warnings. SSL errors relate to certificate issues, untrusted site visit is a more general term, and site isolation violation refers to a different security mechanism.

#### NEW QUESTION # 52

What policy and value provides the most protection against malicious websites?

- A. Set the site isolation policy to be required for all websites
- B. Allow the user ability to bypass Safe Browsing warnings
- C. Enable site isolation for all websites
- **D. Set the Safe Browsing policy to Enhanced mode**

**Answer: D**

Explanation:

Setting the **\*\*Safe Browsing policy to Enhanced mode\*\*** provides the most direct and comprehensive protection against malicious websites by leveraging Google's real-time threat intelligence. Allowing users to bypass warnings (option A) defeats the purpose of Safe Browsing. While site isolation (options C and D) protects against cross-site data leakage, it doesn't directly prevent users from accessing malicious sites in the first place. Enhanced Safe Browsing actively warns and blocks access to dangerous websites.

#### NEW QUESTION # 53

An organization relies heavily on Chrome browser for daily operations. News breaks about two critical hardware vulnerabilities. These vulnerabilities allow attackers to potentially access sensitive information stored in the browser's memory, even across different websites and processes. Which specific Chrome Enterprise Core policy would an administrator implement to help mitigate the risks?

- **A. Enable Site isolation for every website**
- B. Manage Cross-Origin Extensions by Blocking all except an allowlist
- C. Update Chrome browser to the latest stable version
- D. Require Hardware-backed Key Generation for TLS

**Answer: A**

Explanation:

The scenario describes vulnerabilities that could allow cross-site data leakage within the browser's memory.

"Site isolation for every website" is a security feature in Chrome that isolates the rendering process for each website, preventing one site from accessing the data of another, even if a vulnerability is exploited. This policy directly addresses the risk of cross-site information leakage due to memory vulnerabilities. Option A relates to TLS security, option B is a general security best practice but doesn't directly prevent cross-site memory access, and option C manages extension behavior, not core browser memory isolation.

#### NEW QUESTION # 54

An administrator is modifying a policy at the top-level organizational unit (OU), and there is an OU below that should not accept this modification. What can the administrator do to be certain of this\*?

- A. Set policy precedence to Child > Parent
- B. Turn off inheritance for all policies
- C. Set the policy to locally applied at the parent OU
- **D. Set the policy to locally applied at the child OU**

**Answer: D**

Explanation:

To prevent a child OU from inheriting a policy set at a parent OU, the administrator needs to configure the policy within the child OU itself and set its inheritance status to "Locally applied." This explicitly overrides the inherited policy from the parent with a

specific setting for the child OU. Setting it to locally applied at the parent would not prevent inheritance. Turning off inheritance entirely might not be desired for other policies, and "Child > Parent" is the default precedence when inheritance is enabled.

#### NEW QUESTION # 55

An organization has Chrome set to auto-update. The security team runs a compliance report from Chrome Enterprise Core and notices that some rarely used machines are showing an old version of Chrome. However, when an engineer logs in to these PCs and checks Chrome directly, the correct updated version appears. What is the most likely reason for this discrepancy?

- A. The machine has a different version of Chrome installed that is not managed via auto update
- B. Network setting is blocking the unattended auto-update check
- C. The auto-update feature is malfunctioning and not updating Chrome until it is launched
- **D. The display version does not update until Chrome is launched**

**Answer: D**

Explanation:

The most likely reason for this discrepancy is that the version reported in the Chrome Enterprise Core compliance report might not be updated in real-time until Chrome is actively running and checks in. When an engineer logs in and launches Chrome, it likely completes the update process and reports the correct version.

The auto-update feature generally works in the background, and a completely different unmanaged version (option C) or a persistent network block (option D) would likely prevent updates even when Chrome is launched. A malfunctioning auto-update (option A) is less likely to resolve itself upon manual launch.

#### NEW QUESTION # 56

.....

ITPassLeader is a website that can take you access to the road of success. ITPassLeader can provide the quickly passing Google certification Chrome-Enterprise-Administrator exam training materials for you, which enable you to grasp the knowledge of the certification exam within a short period of time, and pass Google Certification Chrome-Enterprise-Administrator Exam for only one-time.
