There is no doubt that you can get a great grade. If you follow our learning pace, you will get unexpected surprises.

Microsoft GitHub Administration Sample Questions (Q22-Q27):

NEW QUESTION # 22

You want to ensure a secret is automatically available to only workflows in internal and private repositories in the organization. Where do you configure the required access policy?

- A. Organization secret
- B. Actions policies
- C. Runner groups
- D. Rulesets

Answer: A

Explanation:

You set the access policy on the Organization Secret itself - configuring its visibility so it's scoped automatically to only internal and private repositories.

NEW QUESTION # 23

What makes GitHub Apps a more secure choice for automation over OAuth Apps?

- A. GitHub Apps always require two-factor authentication.
- B. GitHub Apps are limited to read-only access and cannot write to repositories.
- C. GitHub Apps can only be installed by organization owners.
- D. GitHub Apps authenticate as an app with fine-grained permissions, not as a user.

Answer: D

Explanation:

GitHub Apps authenticate as themselves with fine-grained, installation-scoped permissions and short-lived tokens - rather than inheriting a user's broad OAuth scopes - minimizing blast radius and aligning with least-privilege principles.

NEW QUESTION # 24

Which of the following is a key benefit of setting default read permissions across organizations?

- A. Increases efficiency in content creation and updates.
- B. Suits environments where all users need write access.
- C. Improves collaboration by allowing users to modify content directly.
- D. Enhances security by minimizing unintended modifications.

Answer: D

Explanation:

Enforcing a default of Read for organization members ensures they can view content without the ability to push changes, reducing the risk of accidental or unauthorized modifications.

NEW QUESTION # 25

Your organization wants to reduce costs. Which of the following actions should you take?

- A. Remove all outside collaborators
- B. Disable SAML SSO for members
- C. Regularly audit for inactive users
- D. Grant all users admin permissions

Answer: C

Explanation:

Regularly auditing for inactive (dormant) users lets you suspend or remove accounts that aren't consuming seats - freeing up licenses and directly lowering your per-user subscription costs.

NEW QUESTION # 26

Which of the following GitHub token types supports fine-grained repository permissions AND is recommended for CI/CD automation?

- A. GitHub App Installation Access Tokens
- B. OAuth tokens
- C. Device Tokens
- D. Personal Access Tokens (PATs)

Answer: A

Explanation:

GitHub App Installation Access Tokens are privileged to the exact permissions you grant the App - down to individual repositories - and rotate automatically, making them the recommended choice for CI/CD automation workflows that demand least-privilege, fine-grained access.

NEW QUESTION # 27

.....

Our GH-100 exam guide has high quality of service. We provide 24-hour online service on the GH-100 training engine. If you have any questions in the course of using the bank, you can contact us by email. We will provide you with excellent after-sales service with the utmost patience and attitude.
