

# Updated Ping Identity PAP-001 Practice Material for Exam Preparation

P.S. Free & New PAP-001 dumps are available on Google Drive shared by SureTorrent: [https://drive.google.com/open?id=1O8bmc5KS0sOhrmd4BAhwUfQ\\_gP\\_Mwyzt](https://drive.google.com/open?id=1O8bmc5KS0sOhrmd4BAhwUfQ_gP_Mwyzt)

If you don't professional fundamentals, you should choose our Ping Identity PAP-001 new exam simulator online rather than study difficultly and inefficiently. Learning method is more important than learning progress when your goal is obtaining certification. For IT busy workers, to buy PAP-001 new exam simulator online not only will be a high efficient and time-saving method for most candidates but also the highest passing-rate method.

## Ping Identity PAP-001 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>General Configuration: This section of the exam measures skills of Security Administrators and introduces the different object types within PingAccess such as applications, virtual hosts, and web sessions. It explains managing application resource properties, creating web sessions, configuring identity mappings, and navigating the administrative console effectively.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Security: This section of the exam measures skills of Security Administrators and highlights how to manage certificates and certificate groups. It covers the association of certificates with virtual hosts or listeners and the use of administrator roles for authentication management.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Installation and Initial Configuration: This section of the exam measures skills of System Engineers and reviews installation prerequisites, methods of installing or removing PingAccess, and securing configuration database passwords. It explains the role of run.properties entries and outlines how to set up a basic on-premise PingAccess cluster.</li> </ul>

## 2026 Efficient Ping Identity PAP-001 New Questions

We offer you free update for 365 days for PAP-001 study guide materials, so that you can have a better understanding of what you are going to buy. And update version for PAP-001 exam materials will be sent to your email automatically. In addition, PAP-001 exam materials are compiled by experienced experts, and they are quite familiar with the exam center, therefore if you choose us, you can get the latest information for the exam We also have online and offline chat service, if you have any questions about PAP-001 Study Guide, you can contact with us online or by email, and we will give you reply as quickly as we can.

### Ping Identity Certified Professional - PingAccess Sample Questions (Q10-Q15):

#### NEW QUESTION # 10

An administrator needs to add a set of rules to an application protected by a PingAccess agent. Which rule will be unavailable to add to the application?

- A. Rate Limiting
- **B. Rewrite Cookie Domain**
- C. Network Range
- D. Cross-Origin Request

**Answer: B**

Explanation:

PingAccess distinguishes between gateway rules and agent rules. Some processing rules, such as Rewrite Cookie Domain, only apply when PingAccess is acting as a reverse proxy (gateway), not when protecting applications via agents.

Exact Extract:

"Rewrite Cookie Domain rules are not supported for agent applications. They are only available for proxied (gateway) applications."

\* Option A (Rewrite Cookie Domain) is correct - unavailable with agent applications.

\* Option B (Network Range) is available for both agents and gateways.

\* Option C (Rate Limiting) is supported on both application types.

\* Option D (Cross-Origin Request) is also supported in both.

Reference: PingAccess Administration Guide - Agent vs. Gateway Rules

#### NEW QUESTION # 11

An application owner would like customized errors for rule violations within an application. Where is this configured?

- A. When assigning a Rule to a Resource
- **B. Within the Root Resource of the Application**
- C. Within the Rule definition
- D. When combining Rules into Rule Sets

**Answer: B**

Explanation:

PingAccess allows administrators to configure custom error pages or messages at the Root Resource level of an application. This ensures that when rule violations (e.g., authorization failures) occur, the application can display tailored error responses.

Exact Extract:

"Custom error handling for rule violations is configured within the Root Resource of an application."

\* Option A is incorrect - assigning a rule to a resource does not allow defining custom errors.

\* Option B is correct - the Root Resource is where administrators define custom error handling for the entire application.

\* Option C is incorrect - Rule Sets only combine rules; they do not handle error responses.

\* Option D is incorrect - individual rule definitions do not contain custom error configurations.

Reference: PingAccess Administration Guide - Configuring Application Resources and Error Handling

#### NEW QUESTION # 12

An administrator is integrating a new PingAccess Proxied Application for which the target site uses a certificate issued by a publicly trusted Certificate Authority.

How should the administrator configure PingAccess to trust the target site?

- A. Drop the certificate chain into a Trusted Certificate Group
- B. Import the certificate chain into Key Pairs and add it to a Trusted Certificate Group
- C. Import the certificate chain into Key Pairs
- **D. Configure the PingAccess Site to use the Java Trust Store Certificate Group**

**Answer: D**

Explanation:

Publicly trusted Certificate Authorities are already included in the Java Trust Store Certificate Group, which PingAccess can use directly. This avoids importing the certificate manually.

Exact Extract:

"If the target site uses a certificate from a well-known public CA, configure the site to use the Java Trust Store Certificate Group."

\* Option A is incorrect - Key Pairs store private keys for SSL termination, not public CA trust anchors.

\* Option B is correct - Java Trust Store already contains trusted public CAs.

\* Option C is incorrect - again, Key Pairs are not used for trust validation.

\* Option D is unnecessary for public CAs - only internal/self-signed certs must be imported.

Reference: PingAccess Administration Guide - Trusted Certificate Groups

### NEW QUESTION # 13

What is the purpose of the `engine.ssl.protocols` in the `run.properties` file?

- A. To configure the supported ciphers
- **B. To configure the supported TLS versions**
- C. To configure the supported HTTPS port
- D. To configure SSL protocols used for clustering

**Answer: B**

Explanation:

The property `engine.ssl.protocols` in `run.properties` specifies the TLS protocol versions that PingAccess engines will support for incoming HTTPS traffic.

Exact Extract:

"The `engine.ssl.protocols` property configures which TLS versions are enabled for HTTPS listeners."

\* Option A (ciphers) is incorrect - cipher suites are defined separately, not in this property.

\* Option B (HTTPS port) is incorrect - the port is defined in the engine listener, not here.

\* Option C (TLS versions) is correct - this property controls TLS version support (e.g., TLSv1.2, TLSv1.3).

\* Option D (clustering) is incorrect - clustering does not depend on this property.

Reference: PingAccess Administration Guide - `run.properties` settings

### NEW QUESTION # 14

An administrator needs to support SLO (Single Logout) for a protected web application. What must be configured in a PingAccess Web Session in this situation?

- A. Idle timeout
- B. Refresh User Attributes
- C. Validate Session
- **D. SLO scope**

**Answer: D**

Explanation:

To enable Single Logout (SLO), the `SLO scope` must be defined in the PingAccess Web Session configuration. This determines which sessions are ended when a logout request occurs.

Exact Extract:

"The `SLO scope` option in a web session specifies which applications are included in a logout event when Single Logout is triggered."

\* Option A (`SLO scope`) is correct; it explicitly enables SLO support by linking session termination across apps.

\* Option B (Idle timeout) is unrelated; this controls session expiration, not SLO.

\* Option C (Validate Session) ensures session state is synchronized but does not configure SLO.

\* Option D (Refresh User Attributes) is unrelated; it only controls whether attributes are reloaded.
