NEW QUESTION # 157

In which layer is the physical address assigned?

Available Choices (select all choices that are correct)

- A. Layer 7
- B. Layer 1
- C. Layer 2
- D. Layer 3

Answer: C

NEW QUESTION # 158

Which is the PRIMARY reason why Modbus over Ethernet is easy to manage in a firewall?

Available Choices (select all choices that are correct)

- A. Modbus has no known security vulnerabilities, so firewall rules are simple to implement.
- B. Modbus uses a single master to communicate with multiple slaves using simple commands.
- C. Modbus uses explicit source and destination IP addresses and a single known TCP port.
- D. Modbus is a proprietary protocol that is widely supported by vendors.

Answer: C

NEW QUESTION # 159

Which standard focuses on protecting sensitive information across all organizational systems through a broad Information Security Management System (ISMS)?

- A. ISO/IEC 27001
- B. ISA/IEC 62443
- C. Both ISA/IEC 62443 and ISO/IEC 27001
- D. None of the above

Answer: A

Explanation:

ISO/IEC 27001 is the international standard that defines requirements for establishing, implementing, maintaining, and continually improving an Information Security Management System (ISMS) across an organization.

Step 1: Scope of ISO/IEC 27001

ISO/IEC 27001 applies broadly to all information assets, including IT systems, business processes, and organizational data, regardless of industry.

Step 2: Contrast with ISA/IEC 62443

ISA/IEC 62443 focuses specifically on Industrial Automation and Control Systems, addressing OT-specific risks such as safety, availability, and real-time constraints. While 62443-2-1 aligns with ISMS principles, it is not a general-purpose ISMS standard.

Step 3: Complementary use

Organizations commonly use ISO/IEC 27001 for enterprise-wide information security and ISA/IEC 62443 for OT/IACS environments.

Thus, the standard focused on protecting sensitive information across all organizational systems via an ISMS is ISO/IEC 27001.

NEW QUESTION # 160

Which of the following is the BEST example of detection-in-depth best practices?

Available Choices (select all choices that are correct)

- A. Firewalls and unexpected protocols being used
- B. Role-based access control and VPNs
- C. IDS sensors deployed within multiple zones in the production environment
- D. Role-based access control and unusual data transfer patterns

Answer: C

NEW QUESTION # 161

A company discovers malware on a portable USB device used within their IACS environment. According to the document, which SP Element and controls would be MOST relevant to address this issue?

- A. SP Element 1 - Processes for discovery of security anomalies
- B. SP Element 7 - Incident handling and response
- C. SP Element 2 - Asset inventory baseline
- D. SP Element 4 - Component hardening and dedicated portable media

Answer: D

Explanation:

ISA/IEC 62443-2-1 defines SP Element 4 as covering component hardening, malware protection, and the secure use of portable and mobile media. Malware introduced through USB devices is a well-known attack vector in IACS environments, and the standard addresses this risk explicitly through preventive controls rather than only reactive measures.

Step 1: Nature of the threat

Portable media such as USB drives bypass network-based defenses and can introduce malware directly into critical control systems. ISA/IEC 62443 recognizes this as a high-risk vector, especially in air-gapped or semi-isolated systems.

Step 2: SP Element 4 scope

SP Element 4 requires asset owners to implement technical controls such as:

- * Restrictions on the use of portable media
- * Use of dedicated, controlled media
- * Malware scanning before use
- * Hardening of endpoints to prevent unauthorized execution

Step 3: Why other SP Elements are secondary

- * SP Element 1 focuses on anomaly detection, not prevention.
- * SP Element 2 concerns inventory accuracy.
- * SP Element 7 applies after an incident has occurred.

Step 4: Preventive emphasis

The standard prioritizes prevention of malware introduction through controlled media usage, making SP Element 4 the most relevant.
