資格考試和一年級IAPP Certified Information Privacy Manager (CIPM)的100%合格率CIPM題庫資料和領先提供者

CIPM 認證是業界最廣泛認可的IT技術認證之一，也是業界最權威、最受尊敬的認證之一。全新的微軟認證技術工程師認證提供IT專家一個更清楚明確的架構，讓他們展現其技術技巧、以及針對特殊開發人員之工作角色時所需的技能。如果你正在準備 CIPM 認證考試，為 IAPP 認證做最後衝刺，就可以使用 Testpdf 考試題庫參加 CIPM 考試，再加上你的認真態度，包您一次通過。

要獲得認證，個人必須通過CIPM考試，該考試由基於IAPP的隱私計劃管理機構（PMBOK）組成90個多項選擇問題。該考試是在世界各地的Pearson Vue測試中心進行的。候選人必須在100-500的範圍內獲得300或更高的傳球分數才能獲得認證。

最新的 Certified Information Privacy Manager CIPM 免費考試真題 (Q181-Q186):

問題 #181

How do privacy audits differ from privacy assessments?

- A. They are evidence-based.
- **B. They are based on standards.**
- C. They are conducted by external parties.
- D. They are non-binding.

答案： B

問題 #182

An organization's internal audit team should do all of the following EXCEPT?

- **A. Implement processes to correct audit failures.**
- B. Verify that technical measures are in place.
- C. Ensure policies are being adhered to.
- D. Review how operations work in practice.

答案： A

解題說明：

An organization's internal audit team should not implement processes to correct audit failures, as this is the responsibility of the management or the privacy office. The internal audit team should only verify that technical measures are in place, review how operations work in practice, and ensure policies are being adhered to. Implementing corrective actions would compromise the independence and objectivity of the internal audit team. Reference: CIPM Body of Knowledge, Domain III: Privacy Program Operational Life Cycle, Section A: Assess, Subsection 1: Privacy Assessments and Audits.

問題 #183

With whom would it be best for a privacy professional in an organization to consult regarding Privacy-Enhancing Technologies (PETs)?

- A. An independent privacy technology advocate.
- B. A specialist focused on AI.
- C. An engineer who designs information security technology products.
- **D. An information technologist specializing in information privacy technology.**

答案： D

解題說明：

Comprehensive and Detailed Explanation:

Privacy-Enhancing Technologies (PETs) are designed to protect individuals' privacy while allowing for the use and analysis of data. A privacy professional looking for guidance on PETs should consult an information technologist specializing in information privacy technology because they have expertise in both data privacy principles and the technical implementation of privacy solutions.

A specialist focused on AI (Option A) may have knowledge of AI-driven privacy risks but may not specialize in PETs.

An independent privacy technology advocate (Option B) may promote privacy-enhancing principles but may lack practical implementation expertise.

An engineer focused on security technology products (Option C) may prioritize cybersecurity without integrating privacy-by-design principles.

An information technologist specializing in information privacy technology (Option D) is the best choice because they have the required expertise in privacy technologies, data protection laws, and privacy-by-design implementation.

問題 #184

What should a privacy professional keep in mind when selecting which metrics to collect?

- A. A variety of metrics should be collected before determining their specific functions.
- B. Metrics should reveal strategies for increasing company earnings.
- C. Metrics should be reported to the public.
- **D. The number of metrics should be limited at first.**

答案： D

解題說明：

A privacy professional should keep in mind that the number of metrics should be limited at first when selecting which metrics to collect. Metrics are quantitative measures that help evaluate the performance and effectiveness of a privacy program. However, collecting too many metrics can be overwhelming, confusing, and costly. Therefore, a privacy professional should start with a few key metrics that are relevant, meaningful, actionable, and aligned with the organization's privacy goals and priorities. These metrics can be refined and expanded over time as the privacy program matures and evolves. Reference: [Privacy Metrics], [Measuring Privacy Program Effectiveness]

問題 #185

Which of the following best demonstrates the effectiveness of a firm's privacy incident response process?

- A. The increase of privacy incidents reported by users
- B. The decrease of security breaches
- C. The decrease of mean time to resolve privacy incidents
- D. The decrease of notifiable breaches

答案： C

解題說明：

The decrease of mean time to resolve privacy incidents best demonstrates the effectiveness of a firm's privacy incident response process. This metric measures how quickly and efficiently the firm can identify, contain, analyze, remediate, and report privacy incidents. A lower mean time to resolve indicates a higher level of preparedness, responsiveness, and resilience in handling privacy incidents. References: IAPP CIPM Study Guide, page 25.
