UiPath Certified Professional Automation Business Analyst Professional v1.0 UiPath-ABAv1 Prüfungsfragen mit Lösungen (Q120-Q125):

120. Frage

How can you allocate licenses in the Automation Cloud?

- **A. Direct assignment to user, Group allocation**
- B. Only direct allocation to user, having the option to group the users in the tenant
- C. Pair allocation only, the license is assigned to the user and bound to a selected group
- D. Only group allocation, the user have to assign the license to themselves afterwards

Antwort: A

Begründung:

In the Automation Cloud, licenses can be allocated either by direct assignment to a user or by group allocation. This flexibility allows administrators to efficiently manage and distribute licenses based on organizational needs and user roles, ensuring that resources are optimized across the tenant.

121. Frage

Which of the following principles applies during the Process Documentation stage?

- A. Including more scenarios and business rules should be done after the first review
- B. High-level process map should be created only after the To-Be process map is done
- **C. A minimum of one review is required**
- D. Sign-Off is not mandatory if the feedback was implemented after review.

Antwort: C

Begründung:

During the Process Documentation stage, it is a best practice and often a requirement to have at least one review of the documentation created, such as the Process Design Document (PDD). This ensures that all stakeholders agree on the process as documented and that it accurately represents the business needs and technical requirements.

122. Frage

For your trigger you want to set some non-working days restrictions based on a Calendar Where should you define such a calendar?

- A. At Host level
- B. Directly at trigger level, when creating the Trigger
- C. At Folder level
- **D. At Tenant level**

Antwort: D

Begründung:

Non-working days restrictions based on a calendar should be defined at the Tenant level in UiPath Orchestrator. This allows for the management of non-working days across multiple processes and departments within the same tenant. Once defined, these calendars can be applied to triggers to ensure that automation jobs respect the non-working days settings.

123. Frage

Which of the following are possible queue item statuses in UiPath Orchestrator?

- A. Ready, Running, Completed, and Stopped
- B. New, Assigned, Processed, and Archived
- C. Queued, Started, Finished, and Aborted
- **D. New, In Progress, Successful, and Failed**

Antwort: D

Begründung:

Within UiPath Orchestrator, the possible statuses for queue items include New, In Progress, Successful, and Failed. These statuses represent the lifecycle of a queue item from its creation (New), through its processing (In Progress), to its conclusion, which can either be successful completion (Successful) or encountering an error (Failed). This categorization helps in monitoring and managing the workflow execution more effectively().

124. Frage

What constitutes the test data in the User Acceptance Testing phase of Automation Implementation?

- **A. Process inputs, potentially including transaction lists, documents, and emails. The Business Analyst must ensure that all inputs are properly mapped to the use cases.**
- B. Expected outcomes for each test case, which the Business Analyst must define in advance in collaboration with stakeholders.
- C. Outputs from each test case, including successful and unsuccessful results, which the Business Analyst must keep track of

and report.

- D. All the information in the Runbook document template, which the Business Analyst must verify for accuracy.

Antwort: A

Begründung:

Test Data in UAT: In the User Acceptance Testing (UAT) phase, test data refers to the inputs required to simulate real-world scenarios for validating the automation's functionality and performance.

Examples include transaction lists, business documents, and emails.

This data ensures the automation handles variations effectively and aligns with business needs.

Role of Business Analyst: The Business Analyst ensures that test data is accurately mapped to use cases and validates that it reflects actual business processes.

Stakeholder Collaboration: While expected outcomes and results are important, they are derived from inputs (test data). Proper mapping of test data is critical to achieve realistic and reliable UAT results.
