100% Pass 2026 MB-700: Perfect Microsoft Dynamics 365: Finance and Operations Apps Solution Architect Answers Free

Computers have made their appearance providing great speed and accuracy for our work. IT senior engine is very much in demand in all over the world. Now Microsoft MB-700 latest dumps files will be helpful for your career. Dumpkiller produces the best products with high quality and high passing rate. Our valid MB-700 Latest Dumps Files help a lot of candidates pass exam and obtain certifications, so that we are famous and authoritative in this filed.

Topics Covered in MB-700 Exam

This Microsoft exam tests one's knowledge and competence in accomplishing tasks related to the following areas:

- Creating solution management and testing strategies
- Working with solution components
- Defining solution requirements

The first tested area revolves around solution requirements. It has five points, the first one is identifying business requirements that include a description of the organization with divisions, companies, and other entities, operational & analytical reports, visualizing the organizational structure, and identifying reporting requirements. The second subtopic focuses on the performance of gap analyses that cover business requirements to determine the gap between current services and apps and finding business processes that should be added, modified, or removed to achieve business goals. The third topic is defining compliance requirements that describes those associated with localization and audit, data privacy regulation, and governmental compliance requirements. The fourth sub-topic focuses on defining security requirements, designing the strategy for segregating duties, and architecture for a solution. Lastly, the candidate will learn about determining licensing costs and needs. This topic emphasizes estimating the costs and benefits of a solution related to ongoing infrastructure and cloud services.

The second tested objective involves defining solution management and testing strategies. It consists of three subtopics, and the first one is dedicated to making an application lifecycle management strategy that comprises identifying and selecting instance types, using cases, methodologies, and integration points for implementing Azure DevOps functionality. The second subtopic is advising lifecycle services that include choosing the right LCS tools to support the solution and Regression Suite Automation Tool as well as Regulatory Updates. Lastly, in the third subtopic, candidates will get knowledge about defining a testing strategy. It also determines when to use SysTest, RSAT, and other technologies and tools. Moreover, determining performance goals & requirements, predicting volumes for transaction, and load testing strategies are also included in the exam syllabus.

The third tested domain emphasizes creating solution components. There are four subtopics for this part of the exam. Starting from the first one, it is all about designing the business process, so the applicants have to learn about identifying opportunities for business optimization, selecting solution components for the functional areas, and mapping the business process steps and requirements to plan a solution. The second subtopic is designing data management & migration strategies that involves developing a data migration strategy along with a data cut-over plan, characterizing data sources, and creating a master data management strategy. The third subtopic is designing system integrations that focuses on recommending add-on technologies and services, planning options for integration with third-party solutions, and identifying opportunities to increase ROI. The last subtopic is creating solution infrastructure that covers defining performance requirements, identifying required infrastructure apps, components, features, and services, and choosing between a cloud-based implementation and on-premises one.

The Microsoft MB-700 Exam Tests the candidate's knowledge across four domains, which include designing solution components, configuring and managing Finance and Operations environments, implementing solutions, and managing data and security. MB-700 exam consists of multiple-choice questions and is available in several languages, including English, Japanese, and Chinese. Passing the exam demonstrates the candidate's ability to design and implement solutions that are aligned with business requirements and meet the needs of stakeholders.

Microsoft Dynamics 365: Finance and Operations Apps Solution Architect Sample Questions (Q68-Q73):

NEW QUESTION # 68

A company plans its Dynamics 365 finance and operations apps implementation. The implementation must do the following:

- * Use an agile methodology.
- * Follow Microsoft's recommendations for checks and balances.
- * Align with FastTrack touchpoints.

FastTrack touchpoints must be identified and included in the implementation timeline. You need to integrate FastTrack checks and balances into the implementation methodology. What should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

☐

Answer:
