1z0-1075-25 Certification Cost - Dumps 1z0-1075-25 Download

Frankly speaking, it is difficult to get the 1z0-1075-25 certificate without help. Usually, the time you invest to prepare the exam is long. Now, all of your worries can be wiped out because of our 1z0-1075-25 exam questions. Some people worry about that some difficult knowledge is hard to understand or the 1z0-1075-25 test guide is not suitable for them. Actually, the difficult parts of the exam have been simplified, which will be easy for you to understand. Also, there will be examples, simulations and charts to make explanations vivid. In order to aid you to memorize the Oracle Manufacturing Cloud 2025 Implementation Professional exam cram better, we have integrated knowledge structure. You will clearly know what you are learning and which part you need to learn carefully. You will regret if you give up challenging yourself.

Oracle Manufacturing Cloud 2025 Implementation Professional Sample Questions (Q29-Q34):

NEW QUESTION # 29

Which three actions can a supervisor perform to annul or correct mistakes in a completed work order, committed by a user while entering work order details?

- A. Reverse from Scrap to Ready.
- B. Reverse a Closed order to Open.
- C. Reverse at an operation.
- D. Reverse the product at the last operation.
- E. Correct the Product entered at work order.

Answer: A,C,D

Explanation:

If a mistake is made in a completed work order, supervisors have the ability to perform certain corrective actions to reverse transactions or correct errors:

* Reverse from Scrap to Ready (C) : This action allows the supervisor to reverse a product that was incorrectly marked as scrap back to a ready state, making it available for further operations.

* Reverse at an operation (D) : If the mistake occurred during a specific operation, the supervisor can reverse the transaction at that operation and correct the mistake.

* Reverse the product at the last operation (E) : The supervisor can reverse a transaction at the last operation to make corrections to the final product before closing the work order.

Incorrect options:

* A (Reverse a Closed order to Open) : Once a work order is closed, it cannot be reopened. Reversing transactions must happen before the order is officially closed.

* B (Correct the Product entered at work order) : The product specified in a work order cannot be changed once the order has been processed and completed.

Oracle Cloud documentation on Work Order Reversal Transactions explains the capabilities for reversing scrap, operation, and product entries to correct errors in work orders.

NEW QUESTION # 30

Which three requirements are fulfilled by nonstandard work orders?

- A. Repair
- B. Rework
- C. Rescheduling
- D. Prototype

Answer: A,B,D

Explanation:

Nonstandard work orders in Oracle Manufacturing Cloud are used for specialized tasks that do not follow typical production processes. The following are the main requirements fulfilled by nonstandard work orders:

* Repair : Nonstandard work orders can be used for maintenance and repair tasks to fix or refurbish defective or damaged items.

* Rework : These work orders are also used for rework processes, where a product needs to be reprocessed to meet quality standards or specifications.

* Prototype : Nonstandard work orders can handle prototype production, where items are produced in small quantities for testing and development before mass production.

Rescheduling (A) is typically handled by standard work orders in the production schedule rather than through nonstandard work orders.

Oracle Manufacturing Cloud documentation on " Nonstandard Work Orders " explains how they are used for tasks such as repair, rework, and prototype manufacturing.

NEW QUESTION # 31

A Production Supervisor queries a work order, WO-1025, from the Manage Work Orders page. On the Entering Edit Work Order: WO-1025 page, the supervisor finds a General Information, Operations, and History tab, but no Reservations tab.

What are two reasons for the Reservations tab not being displayed for WO-1025?

- A. It is not a Pick-to-Order work order.
- B. It Is not a Drop-Ship work order.
- C. It is not a Plan-to-Produce work order.

- D. It is not a Configured Item work order.
- E. It is not a Back-to-Back work order.

Answer: D,E

Explanation:

In Oracle Manufacturing Cloud, the Reservations tab on the Edit Work Order page is displayed only for specific types of work orders that require reservations of components or materials. The absence of the Reservations tab in work order WO-1025 indicates that the work order is not one of the following types:

- * Configured Item Work Order (A) : Configured items are typically built based on specific customer requirements, and reservations of components are often necessary. Since WO-1025 is not a configured item work order, the Reservations tab is not shown.
- * Back-to-Back Work Order (E) : Back-to-back work orders are linked to sales orders and require reservations of materials to fulfill the specific demand. Since WO-1025 is not a back-to-back work order, the tab is not displayed.

Incorrect options:

* B, C, D : Drop-Ship, Pick-to-Order, and Plan-to-Produce work orders do not typically require reservations in the same way as configured or back-to-back orders, which is why they are not the reasons for the absence of the Reservations tab.

Oracle Cloud documentation on work order types and the Reservations tab explains the conditions under which reservations are required and when the tab is displayed.

NEW QUESTION # 32

A manufacturing plant has two shifts of eight hours each for the work center WCI: day shift and night shift.

You associate four units each of the resources R1, R2, R3, and R4 to WCI. The customer wants to assign all units of R2 available for day and night shift.

What is the correct sequence of steps to achieve this?

- A. Associate R2 with WCI > Select the Available 24 Hours check box > Go to the Resource Availability region > Enter 2 in the Day Shift column > Enter 2 in the Night Shift column.
- B. Associate R2 with WCI > Deselect the Available 24 Hours check box > Go to the Resource Availability region > Enter 2 In the Day Shift column > Enter 2 In the Night Shift column.
- C. Associate R2 with WCI > Deselect the Available 24 Hours check box > Go to the Resource Availability region > Enter 4 in the Day Shift column > Enter 4 In the Night Shift column.
- D. Associate R2 with WCI > Select the Available 24 Hours check box > Go to the Resource Availability region > Enter 4 in the Day Shift column > Enter 4 In the Night Shift column.

Answer: D

Explanation:

In Oracle Manufacturing Cloud, to assign all units of resource R2 across both day and night shifts for the work center WC1, follow these steps:

* Associate R2 with WC1 - This step ensures that the resource R2 is linked to the work center.

* Select the Available 24 Hours check box - By selecting this option, you indicate that the resource is available for both shifts across the full 24-hour period.

* Enter 4 in the Day Shift and Night Shift columns - Inputting 4 units in both shifts ensures that all units of R2 are available for use during the entire day and night shifts.

Oracle Manufacturing Cloud guides explain the Resource Availability configuration for multi-shift operations, where the Available 24 Hours setting controls resource availability across shifts.

NEW QUESTION # 33

Which two reports provide work order cost-related information to Costing users?

- A. Work Order Operational Analysis
- B. Purchase Variance Summary
- C. WIP Balance by Plant
- D. Receipt Accounting Dashboard

Answer: A,C

Explanation:

The following reports provide cost-related information to Costing users in Oracle Manufacturing Cloud:

* Work Order Operational Analysis (A) : This report provides detailed information on the operations performed in a work order, including cost-related data, helping costing users analyze production efficiency and associated costs.

* WIP Balance by Plant (C) : This report gives costing users insight into work-in-progress (WIP) balances for each plant, showing the costs associated with incomplete work orders and materials in the production process.

Incorrect options:

* Receipt Accounting Dashboard (B) is used for receipt-related accounting, not work order costs.

* Purchase Variance Summary (D) focuses on purchase price variances, not work order-related costs.

Oracle Cloud SCM Cost Management guides describe how the Work Order Operational Analysis and WIP Balance by Plant reports help costing users track and analyze costs associated with work orders.

NEW QUESTION # 34

.....

In informative level, we should be more efficient. In order to take the initiative, we need to have a strong ability to support the job search. And how to get the test 1z0-1075-25 certification in a short time, which determines enough 1z0-1075-25 qualification certificates to test our learning ability and application level. Our 1z0-1075-25 Exam Questions are specially designed to meet this demand for our worthy customers. As long as you study with our 1z0-1075-25 learning guide, you will pass the exam and get the certification for sure.
