## New CISA Test Objectives | CISA Real Question

There are many other advantages. To gain a full understanding of our product please firstly look at the introduction of the features and the functions of our CISA exam torrent. The page of our product provide the demo and the aim to provide the demo is to let the you understand part of our titles before their purchase and see what form the software is after the you open it. The client can visit the page of our product on the website. So the client can understand our CISA Quiz torrent well and decide whether to buy our product or not at their wishes. The client can see the forms of the answers and the titles.

The CISA exam tests candidates on five domains, including auditing information systems, governance and management of IT, information systems acquisition, development and implementation, information systems operations, maintenance and service management, and protection of information assets. CISA Exam consists of 150 multiple-choice questions, and candidates have four hours to complete it. To pass the exam, candidates must score at least 450 out of a possible 800 points.

## ISACA Certified Information Systems Auditor Sample Questions (Q803-Q808):

### NEW QUESTION # 803

What is the primary objective of a control self-assessment (CSA) program?

- A. Replacement of the audit responsibility
- B. Elimination of the audit responsibility

- C. Enhancement of the audit responsibility
- D. Integrity of the audit responsibility

**Answer: C**

Explanation:

Audit responsibility enhancement is an objective of a control self-assessment (CSA) program.

#### **NEW QUESTION # 804**

Which of the following is an IS auditor's BEST recommendation to help an organization increase the efficiency of computing resources?

- A. Hardware upgrades
- B. Overclocking the central processing unit (CPU)
- C. Real-time backups
- D. Virtualization

**Answer: D**

#### **NEW QUESTION # 805**

Which of the following would be the BEST method for ensuring that critical fields in a master record have been updated properly?

- A. Reasonableness checks
- B. Field checks
- C. A before-and-after maintenance report
- D. Control totals

**Answer: C**

Explanation:

Section: Protection of Information Assets

Explanation:

A before-and-after maintenance report is the best answer because a visual review would provide the most positive verification that updating was proper.

#### **NEW QUESTION # 806**

What is used to develop strategically important systems faster, reduce development costs, and still maintain high quality? Choose the BEST answer.

- A. PERT
- B. GANTT
- C. Decision trees
- D. Rapid application development (RAD)

**Answer: D**

Explanation:

Explanation/Reference:

Rapid application development (RAD) is used to develop strategically important systems faster, reduce development costs, and still maintain high quality.

#### **NEW QUESTION # 807**

Which of the following statement is NOT true about Voice-Over IP (VoIP)?

VoIP uses circuit switching technology

Lower cost per call or even free calls, especially for long distance call  
Lower infrastructure cost  
VoIP is a technology where voice traffic is carried on top of existing data infrastructure

- A. VoIP is a technology where voice traffic is carried on top of existing data infrastructure
- **B. VoIP uses circuit switching technology**
- C. Lower cost per call or even free calls, especially for long distance call
- D. Lower infrastructure cost

**Answer: B**

Explanation:

Explanation/Reference:

The NOT is a keyword used in the question. You need to find out invalid statement about VoIP. VoIP uses packet switching and not circuit switching.

For your exam you should know below information about VoIP:

Voice-Over-IP

IP telephony, internet telephony, is the technology that makes it possible to have a voice conversation over the Internet or over any dedicated IP network instead of dedicated transmission lines. The protocol is used to carry the signal over the IP network are commonly referred as Voice-Over-IP (VoIP). VoIP is a technology where voice traffic is carried on top of existing data infrastructure. Sounds are digitalized into IP packets and transferred through the network layer before being decode back into the original voice.

VoIP allows the elimination of circuit switching and the associated waste of bandwidth. Instead, packet switching is used, where IP packets with voice data are sent over the network only when data needs to be sent.

It has advantages over traditional telephony:

Unlike traditional telephony, VoIP innovation progresses at market rates rather than at the rates of multilateral committee process of the International Telecommunication Union (ITU) Lower cost per call or even free calls, especially for long distance call Lower infrastructure costs. Once IP infrastructure is installed, no or little additional telephony infrastructure is needed  
VoIP Security Issues  
With the introduction of VoIP, the need for security is more important because it is needed to protect two assets - the data and the voice.

Protecting the security of conversation is vital now.

In VoIP, packets are sent over the network from the user's computer or VoIP phone to similar equipment at other end. Packets may pass through several intermediate systems that are not under the control of the user's ISP. The current Internet architecture does not provide same physical wire security as phone line.

The main concern of VoIP solution is that while, in the case of traditional telephones, if data system is disrupted, then the different sites of the organization could still be reached via telephone. Thus a backup communication facility should be planned for if the availability of communication is vital to organization.

Another issue might arises with the fact that IP telephones and their supporting equipment require the same care and maintenance as computer system do.

To enhance the protection of the telephone system and data traffic, the VoIP infrastructure should be segregated using Virtual Local Area Network (VLAN).

In many cases, session border controllers (SBCs) are utilized to provide security features for VoIP traffic similar to that provided by firewalls.

The following were incorrect answers:

Lower cost per call or even free calls, especially for long distance call - This is a valid statement about VoIP. In fact it is an advantage of VoIP.

Lower infrastructure cost - This is a valid statement and advantage of using VoIP as compare to traditional telephony system.

VoIP is a technology where voice traffic is carried on top of existing data infrastructure - This is also valid statement about VoIP.

The following reference(s) were/was used to create this question:
