

SAP C_ABAPD_2507유효한인증공부자료, C_ABAPD_2507완벽한덤프문제자료

참고: Itexamdump에서 Google Drive로 공유하는 무료 2025 SAP C_ABAPD_2507 시험 문제집이 있습니다:
https://drive.google.com/open?id=1sVBGHTOObKJ6Xp24EmPY5iu8Zo_bBcXu

SAP C_ABAPD_2507인증은 아주 중요한 인증시험중의 하나입니다. Itexamdump의 베테랑의 전문가들이 오랜 풍부한 경험과 IT지식으로 만들어낸 IT관련인증시험 자격증자료들입니다. 이런 자료들은 여러분이SAP인증시험중의C_ABAPD_2507시험을 안전하게 패스하도록 도와줍니다. Itexamdump에서 제공하는 덤프들은 모두 100%통과율을 보장하며 그리고 일년무료 업데이트를 제공합니다

SAP C_ABAPD_2507 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none">• SAP Clean Core Extensibility and ABAP Cloud: This section of the exam measures skills of SAP Application Programmers and covers the clean core principles and extensibility options within SAP BTP. It also includes cloud-native ABAP development practices, emphasizing the creation of upgrade-stable and maintainable extensions aligned with SAP's cloud strategy.
주제 2	<ul style="list-style-type: none">• ABAP SQL and Code Pushdown: This section of the exam measures skills of SAP ABAP Developers and covers the use of advanced SQL techniques within ABAP. It includes code pushdown strategies that leverage database-level processing to enhance application performance. Key areas include Open SQL enhancements and integrating logic closer to the database.
주제 3	<ul style="list-style-type: none">• ABAP RESTful Application Programming Model: This section of the exam measures skills of SAP Application Programmers and covers the fundamentals of the ABAP RESTful Application Programming Model (RAP). It includes topics such as behavior definitions, service binding, and the use of managed and unmanaged scenarios. The focus is on building modern, scalable, and cloud-ready applications using RAP.

주제 4	<ul style="list-style-type: none"> • Core ABAP Programming: This section of the exam measures skills of SAP Application Programmers and covers foundational ABAP programming knowledge. Topics include modularization techniques, internal tables, control structures, and classical report programming. Mastery of these concepts is essential for building efficient ABAP applications.
주제 5	<ul style="list-style-type: none"> • Object-Oriented Design: This section of the exam measures skills of SAP ABAP Developers and covers the basics of object-oriented programming in ABAP. It includes concepts such as classes, interfaces, inheritance, polymorphism, and encapsulation, all of which are necessary for building robust and scalable ABAP applications.

C_ABAPD_2507완벽한 덤프문제자료 & C_ABAPD_2507유효한 공부자료

힘든 SAP C_ABAPD_2507시험패스도 간단하게 ! Itexamdump의 전문가들은 SAP C_ABAPD_2507 최신시험문제를 연구하여 시험대비에 딱 맞는 SAP C_ABAPD_2507덤프를 출시하였습니다. Itexamdump덤프를 구매하시면 많은 정력을 기울이지 않으셔도 시험을 패스하여 자격증취득이 가능합니다. Itexamdump의 SAP C_ABAPD_2507덤프로 자격증 취득의 꿈을 이루어보세요.

최신 SAP Certified Associate C_ABAPD_2507 무료샘플문제 (Q74-Q79):

질문 # 74

You want to join two database tables, T_CARRIER, and T_CONNECTIONS, to retrieve all carriers, whether they have corresponding connections or not.

Which statements would achieve this? Note: There are 2 correct answers to this question.

- A. **SELECT FROM carrier LEFT OUTER JOIN t_connections ON...**
- B. SELECT FROM carrier INNERR JOIN t_connections ON...
- C. **SELECT FROM connections RIGHT OUTER JOIN t_carrier ON...**
- D. SELECT FROM carrier LEFT INNER JOIN t_connections ON..

정답: A,C

질문 # 75

You want to extract date information of a flight date (f_info) and format it like yyyy-dd-mm using the following code:

```
SELECT FROM TABLE dbtab1
```

```
FIELDS fl,
```

```
extract_year( f_info ) && '-' && extract_month( f_info ) && '-' && extract_day( f_info ) ...
```

For the extract_* functions to work, what can be the data dictionary types of f_info?

Note: There are 3 correct answers to this question.

- A. **UTCLONG**
- B. **DATS**
- C. TIMS
- D. TIMN
- E. **TIMESTAMP**

정답: A,B,E

설명:

Comprehensive and Detailed Explanation From Exact Extract:

The EXTRACT_YEAR, EXTRACT_MONTH, and EXTRACT_DAY functions in ABAP SQL are SQL built-in functions used for extracting date components. These functions are only supported for timestamp- capable or date-capable fields.

According to the ABAP CDS Development Guide and SAP HANA SQL capabilities available to ABAP SQL via CDS or native SQL:

* DATS (ABAP Dictionary data type for dates) is fully supported for extract functions.

* TIMESTAMP and UTCLONG are also supported since they represent full date-time values and are mapped internally to TIMESTAMP with time zone considerations.

* TIMS is a time-only type and is not valid for extract date functions.

* TIMN is for time periods and is also not valid for extracting year, month, or day.

Therefore:

* Option B (UTCLONG) - correct

* Option C (TIMESTAMP) - correct

* Option D (DATS) - correct

* Options A (TIMS) and E (TIMN) - incorrect

Reference: ABAP CDS Development User Guide, section 2.2 - SQL expressions and supported built-in functions in code pushdown; extract_* documented for date/time-compatible types.

질문 # 76

The class `zcl_demo_class` is in a software component with the language version set to "Standard ABAP". The function module "ZF1" is in a software component with the language version set to "ABAP Cloud". Both the class and function module are customer created. Regarding line #6, which of the following is a valid statement?

- A. 'ZF1' can be called whether it has been released or not for cloud development.
- B. 'ZF1' can be called via a wrapper that itself has not been released for cloud development.
- C. 'ZF1' must be released for cloud development to be called.
- D. 'ZF1' can be called via a wrapper that itself has been released for cloud development.

정답: D

설명:

The function module ZF1 is in a software component with the language version set to "ABAP Cloud". This means that it follows the ABAP Cloud Development Model, which requires the usage of public SAP APIs and extension points to access SAP functionality and data. These APIs and extension points are released by SAP and documented in the SAP API Business Hub1. Customer-created function modules are not part of the public SAP APIs and are not released for cloud development. Therefore, calling a function module directly from a class with the language version set to "Standard ABAP" is not allowed and will result in a syntax error. However, there is a possible way to call a function module indirectly from a class with the language version set to "Standard ABAP":

Create a wrapper class or interface for the function module and release it for cloud development. A wrapper is a class or interface that encapsulates the function module and exposes its functionality through public methods or attributes. The wrapper must be created in a software component with the language version set to "ABAP Cloud" and must be marked as released for cloud development using the annotation `@EndUserText.label`. The wrapper can then be called from a class with the language version set to "Standard ABAP" using the public methods or attributes2.

For example, the following code snippet shows how to create a wrapper class for the function module ZF1 and call it from the class `zcl_demo_class`:

```
@EndUserText.label: 'Wrapper for ZF1' CLASS zcl_wrapper_zf1 DEFINITION PUBLIC FINAL CREATE PUBLIC. PUBLIC SECTION. CLASS-METHODS: call_zf1 IMPORTING iv_a TYPE i iv_b TYPE i EXPORTING ev_result TYPE i. ENDCLASS. CLASS zcl_wrapper_zf1 IMPLEMENTATION. METHOD call_zf1. CALL FUNCTION 'ZF1' EXPORTING a = iv_a b = iv_b IMPORTING result = ev_result. ENDMETHOD. ENDCLASS. CLASS zcl_demo_class DEFINITION. METHODS: m1. ENDCLASS. CLASS zcl_demo_class IMPLEMENTATION. METHOD m1. DATA(lv_result) = zcl_wrapper_zf1=>call_zf1( iv_a = 2 iv_b = 3 ). WRITE: / lv_result. ENDMETHOD. ENDCLASS.
```

The output of this code is:

5

질문 # 77

Given the following ABAP code, which exception will be raised on execution?

```
CONSTANTS c_char TYPE c LENGTH 1 VALUE ''.
```

```
TRY.
```

```
result = 2 / c_char.
```

```
out->write( |Result: { result }| ).
```

```
CATCH cx_sy_zerodivide.
```

```
out->write( |Error: Division by zero is not defined| ).
```

```
CATCH cx_sy_conversion_no_number.
out->write( |Error: { c_char } is not a number!| ).
CATCH cx_sy_itab_line_not_found.
out->write( |Error: Itab contains less than { 2 / c_char } rows| ).
ENDTRY.
```

- A. cx_sy_conversion_no_number
- B. cx_sy_itab_line_not_found
- C. cx_sy_zerodivide

정답: A

설명:

Comprehensive and Detailed Explanation from Exact Extract:

Here, c_char is defined as a character type with a space ' ' as its value.

When attempting 2 / c_char, ABAP tries to interpret the character ' ' as a number. Since it is not a numeric value, ABAP raises the conversion error cx_sy_conversion_no_number.

* cx_sy_zerodivide would occur only if the denominator was zero numeric.

* cx_sy_itab_line_not_found applies to internal table access errors, not relevant here.

This is consistent with ABAP Cloud runtime exception handling, where strict typing and error categories are clearly defined.

질문 # 78

Which models must you use to develop artifacts that expose ABAP-based backend services based on semantic data models?
(Select 2)

- A. ABAP Cloud Development Model
- B. ABAP RESTful Application Programming Model
- C. ABAP Programming Model for SAP Fiori
- D. Cloud Application Programming Model

정답: B,C

설명:

Comprehensive and Detailed Explanation From Exact Extract:

* RAP defines the architecture for OData services based on CDS semantic data models and ABAP behavior-this is the current model.

* The predecessor is the ABAP Programming Model for SAP Fiori (BOPF/CDS-based), which can be migrated into RAP; it also exposes ABAP backend logic via CDS semantics.

* ABAP Cloud Development Model (B) is the rule set/contract (release contracts, checks), not the service-building model. CAP (C) targets Node.js/Java on BTP, not ABAP-based backend services.
