UiPath-ADPv1 Complete Exam Dumps, Online UiPath-ADPv1 Version
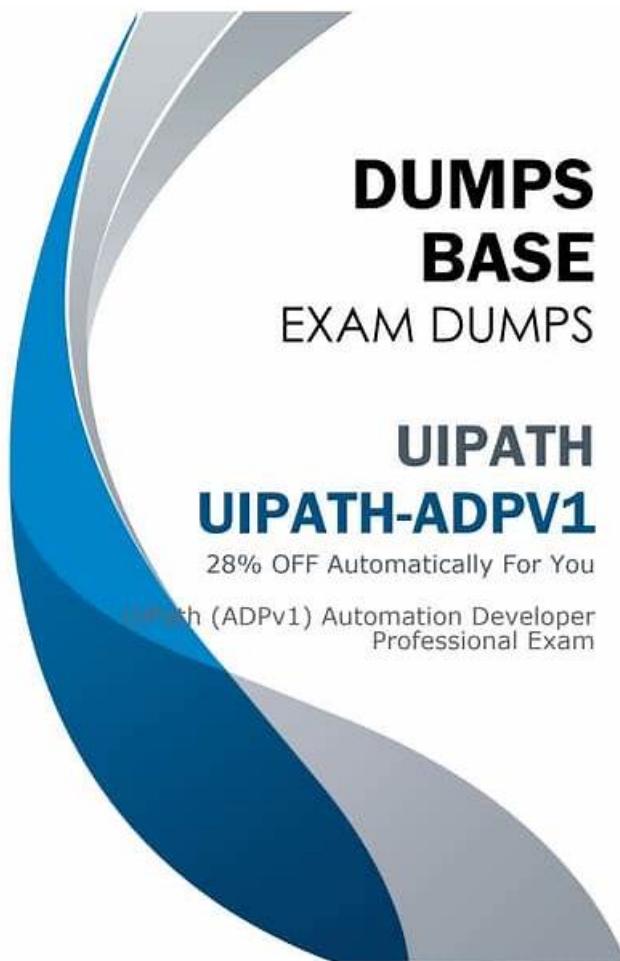

The BraindumpsIT is committed to providing the best possible study material to succeed in the UiPath (ADPv1) Automation Developer Professional (UiPath-ADPv1) exam. With actual PDF questions, customizable practice exams, and 24/7 support, customers can be confident that they are getting the best possible prep material. The BraindumpsIT UiPath-ADPv1 is an excellent choice for anyone looking to advance their career with the certification. Buy Now.

You can invest safely spend your money to get UiPath-ADPv1 exam preparation products with as we provide money back guarantee. If you won't pass the actual UiPath-ADPv1 exam, after using the BraindumpsIT practice test or PDF questions and answers booklet useful for preparing the UiPath-ADPv1 exam version, you can get the money back. We offer a free trial also, so that you can check the quality and working of UiPath-ADPv1 Exam Practice test software. In case, you have prepared the UiPath-ADPv1 exam with our products and did not pass the exam we will reimburse your money.

Pass Guaranteed UiPath - Perfect UiPath-ADPv1 Complete Exam Dumps

In recent years, our UiPath-ADPv1 test torrent has been well received and have reached 99% pass rate with all our dedication. As

a powerful tool for a lot of workers to walk forward a higher self-improvement, our UiPath-ADPv1 certification training continue to pursue our passion for advanced performance and human-centric technology. A good deal of researches has been made to figure out how to help different kinds of candidates to get UiPath (ADPv1) Automation Developer Professional certification. We revise and update the UiPath (ADPv1) Automation Developer Professional guide torrent according to the changes of the syllabus and the latest developments in theory and practice. We base the UiPath-ADPv1 Certification Training on the test of recent years and the industry trends through rigorous analysis.

UiPath UiPath-ADPv1 Exam Syllabus Topics:

Topic	Details
Topic 1	• Design and Development: This section covers designing workflows using sequences, flowcharts, and state machines, building reusable components with libraries, exception handling and debugging techniques, etc.
Topic 2	• UiPath Studio Fundamentals: In this section, the focus is given to the understanding of Robotic Process Automation (RPA) concepts; it covers UiPath Studio and its components, Working with the UiPath user interface, project creation, management, and version control.
Topic 3	• Debugging and Testing: This section is about utilizing logging and debugging tools and adopting unit testing and test automation strategies.
Topic 4	• UiPath Activities: In this section, the discussion is related to various UiPath activities for UI interaction, data manipulation, control flow, and more.

UiPath (ADPv1) Automation Developer Professional Sample Questions (Q200-Q205):

NEW QUESTION # 200
What are the steps to publish a project from UiPath Studio?
Instructions: Drag the Description found on the "Left" and drop on the correct Step Sequence found on the "Right".

☐

Answer:

Explanation:

☐

NEW QUESTION # 201
Which part of a test case that is using BDD (Behavioral-Driven Development) template structure supports the Surround with mock feature?

- A. When
- B. Then
- C. Setup
- D. Given

Answer: C

Explanation:
In the BDD (Behavioral-Driven Development) template structure, the "Setup" part of a test case supports the Surround with mock feature. This section is used to set up the testing environment, including mock configurations.

NEW QUESTION # 202
A developer needs to create a repetitive process in the REFramework. Following the best practices, which action(s) should be performed to defend against potential robot crashes such as "out of memory"?

- A. Add a "Clear Collection" activity at the beginning of the Process.xaml workflow.

- B. After every transaction, clear the transaction data, close the applications, and re-open the applications.
- C. All "Invoke Workflow File" activities from the Main.xaml file should be marked with the Isolated option.
- D. Build a script that compares current CPU usage values to a threshold and clears data as needed.

Answer: C

Explanation:
The best practice for creating a repetitive process in the REFramework and defending against potential robot crashes such as "out of memory" is to mark all "Invoke Workflow File" activities from the Main.xaml file with the Isolated option. The Isolated option enables the workflow to run in a separate process, which reduces the memory consumption and the risk of memory leaks. It also improves the stability and the performance of the robot, as it isolates the errors and the exceptions that might occur in the invoked workflow. The Isolated option can be found in the Properties panel of the "Invoke Workflow File" activity, under the Options category. By marking all the invoked workflows as Isolated, the developer can ensure that the robot can handle a large number of transactions without crashing or slowing down

NEW QUESTION # 203
A developer aims to employ the REFramework for automating a business process that Involves a TransactionData collection (DataTable) comprising vendor names and addresses.
Instructions: Choose the appropriate variable type for the TransactionItem from the provided drop-down list in the following exhibit.

Answer:

Explanation:
Explanation:
The REFramework (Robotic Enterprise Framework) in UiPath is designed to work with transactional data. For a process that involves iterating over a DataTable where each row represents a transaction item, the appropriate variable type for the TransactionItem would be a DataRow.
In the context of REFramework, a DataRow is typically used to represent a single transaction item when the transaction data is contained within a DataTable. This allows the framework to process each row (or transaction) one by one.
Therefore, the correct variable type for the TransactionItem from the drop-down list should be DataRow.

NEW QUESTION # 204
A developer has designed a Performer process using the REFramework template in UiPath Studio. The process is published to an Orchestrator folder named "FolderA" and a job is created in Orchestrator from the package. The value of the OrchestratorQueueName setting in "Config.xlsx" is "QueueA" and the value of OrchestratorQueueFolder is "FolderA".
The developer runs the job from Orchestrator with the following argument values:
in_OrchestratorQueueName = "QueueB" in_OrchestratorOueueFolder = empty value Which queue will be consumed by the robot?

- A. QueueB from Shared.
- B. QueueB from FolderA.
- C. OueueA from FolderA.
- D. QueueA from Shared.

Answer: B

Explanation:
The queue that will be consumed by the robot is QueueB from FolderA. This is because the arguments passed from Orchestrator have priority over the settings from the Config file. Therefore, the value of in_OrchestratorQueueName overrides the value of OrchestratorQueueName, and the value of in_OrchestratorQueueFolder overrides the value of OrchestratorQueueFolder.
However, since the value of in_OrchestratorQueueFolder is empty, the default folder where the process is published is used, which is FolderA1.
The other options are not correct, because they do not reflect the values of the arguments passed from Orchestrator. For example:
Option A is incorrect, because the queue name is QueueA, not QueueB.
Option B is incorrect, because the queue folder is Shared, not FolderA.
Option D is incorrect, because the queue folder is Shared, not FolderA.
