The team of experts hired by 1Z0-1127-25 exam torrent constantly updates and supplements the contents of our study materials according to the latest syllabus and the latest industry research results, and compiles the latest simulation exam question based on the research results of examination trends. We also have dedicated staffs to maintain updating 1Z0-1127-25 Practice Test every day, and you can be sure that compared to other test materials on the market, 1Z0-1127-25 quiz guide is the most advanced.

Are you often regretful that you have purchased an inappropriate product? Unlike other platforms for selling test materials, in order to make you more aware of your needs, 1Z0-1127-25 study materials provide sample questions for you to download for free. You can use the sample questions to learn some of the topics about 1Z0-1127-25 study materials and familiarize yourself with the 1Z0-1127-25 software in advance. If you feel that the 1Z0-1127-25 study materials are satisfying to you, you can choose to purchase our complete question bank. After the payment, you will receive the email sent by the system within 5-10 minutes. Click on the login to start learning immediately with 1Z0-1127-25 study materials. No need to wait.

1Z0-1127-25 Practice Exams & Latest 1Z0-1127-25 Test Sample

In order to make every customer to get the most suitable method to review 1Z0-1127-25 exam, we provide three versions of the 1Z0-1127-25 exam materials: PDF, online version, and test software. We believe that there is always a kind of method to best help your exam preparation. Each version has a free demo for you to try, and each version has the latest and most comprehensive 1Z0-1127-25 Exam Materials.

Oracle Cloud Infrastructure 2025 Generative AI Professional Sample Questions (Q22-Q27):

NEW QUESTION # 22
What does a higher number assigned to a token signify in the "Show Likelihoods" feature of the language model token generation?

- A. The token is more likely to follow the current token.
- B. The token will be the only one considered in the next generation step.
- C. The token is unrelated to the current token and will not be used.
- D. The token is less likely to follow the current token.

Answer: A

Explanation:
Comprehensive and Detailed In-Depth Explanation=
In "Show Likelihoods," a higher number (probability score) indicates a token's greater likelihood of following the current token, reflecting the model's prediction confidence-Option B is correct. Option A (less likely) is the opposite. Option C (unrelated) misinterprets-likelihood ties tokens contextually. Option D (only one) assumes greedy decoding, not the feature's purpose. This helps users understand model preferences.
OCI 2025 Generative AI documentation likely explains "Show Likelihoods" under token generation insights.

NEW QUESTION # 23
Which statement is true about string prompt templates and their capability regarding variables?

- A. They are unable to use any variables.
- B. They support any number of variables, including the possibility of having none.
- C. They can only support a single variable at a time.
- D. They require a minimum of two variables to function properly.

Answer: B

Explanation:
Comprehensive and Detailed In-Depth Explanation=
String prompt templates (e.g., in LangChain) are flexible frameworks that can include zero, one, or multiple variables (placeholders) to customize prompts dynamically. They can be static (no variables) or complex (many variables), making Option C correct. Option A is too restrictive. Option B is false-variables are a core feature. Option D is incorrect, as no minimum is required. This flexibility aids prompt engineering.
OCI 2025 Generative AI documentation likely covers prompt templates under LangChain or prompt design.

NEW QUESTION # 24
Given the following prompts used with a Large Language Model, classify each as employing the Chain-of-Thought, Least-to-Most, or Step-Back prompting technique:

- A. "To understand the impact of greenhouse gases on climate change, let's start by defining what greenhouse gases are. Next, we'll explore how they trap heat in the Earth's atmosphere."A. 1: Step-Back, 2: Chain-of-Thought, 3: Least-to-MostB. 1: Least-to-Most, 2: Chain-of-Thought, 3: Step-BackC. 1: Chain-of-Thought, 2: Step-Back, 3: Least-to-MostD. 1: Chain-of-Thought, 2: Least-to-Most, 3: Step-Back
- B. "Solve a complex math problem by first identifying the formula needed, and then solve a simpler version of the problem before tackling the full question."
- C. "Calculate the total number of wheels needed for 3 cars. Cars have 4 wheels each. Then, use the total number of wheels to determine how many sets of wheels we can buy with $200 if one set (4 wheels) costs $50."

Answer: A

Explanation:
Comprehensive and Detailed In-Depth Explanation=
Prompt 1: Shows intermediate steps (3 × 4 = 12, then 12 ÷ 4 = 3 sets, $200 ÷ $50 = 4)-Chain-of-Thought.
Prompt 2: Steps back to a simpler problem before the full one-Step-Back.
Prompt 3: OCI 2025 Generative AI documentation likely defines these under prompting strategies.

NEW QUESTION # 25
Which is NOT a typical use case for LangSmith Evaluators?

- A. Evaluating factual accuracy of outputs

- B. Aligning code readability
- C. Measuring coherence of generated text
- D. Detecting bias or toxicity

Answer: B

Explanation:
Comprehensive and Detailed In-Depth Explanation=
LangSmith Evaluators assess LLM outputs for qualities like coherence (A), factual accuracy (C), and bias/toxicity (D), aiding development and debugging. Aligning code readability (B) pertains to software engineering, not LLM evaluation, making it the odd one out-Option B is correct as NOT a use case. Options A, C, and D align with LangSmith's focus on text quality and ethics.
OCI 2025 Generative AI documentation likely lists LangSmith Evaluator use cases under evaluation tools.

NEW QUESTION # 26
In which scenario is soft prompting especially appropriate compared to other training styles?

- A. When the model requires continued pre-training on unlabeled data.
- B. When there is a significant amount of labeled, task-specific data available.
- C. When there is a need to add learnable parameters to a Large Language Model (LLM) without task-specific training.
- D. When the model needs to be adapted to perform well in a different domain it was not originally trained on.

Answer: C

Explanation:
Comprehensive and Detailed In-Depth Explanation=
Soft prompting (e.g., prompt tuning) involves adding trainable parameters (soft prompts) to an LLM's input while keeping the model's weights frozen, adapting it to tasks without task-specific retraining. This is efficient when fine-tuning or large datasets aren't feasible, making Option C correct. Option A suits full fine-tuning, not soft prompting, which avoids extensive labeled data needs. Option B could apply, but domain adaptation often requires more than soft prompting (e.g., fine-tuning). Option D describes continued pretraining, not soft prompting. Soft prompting excels in low-resource customization.
OCI 2025 Generative AI documentation likely discusses soft prompting under parameter-efficient methods.
