ISTQB (ISTQB CTAL-TA) ISTQB Certified Tester Advanced Level - Test Analyst (Syllabus 2012) Sample Questions (Q17-Q22):

NEW QUESTION # 17
What is main difference between user experience and usability?

- A. Usability relates to people's perceptions and responses; user experience relates to characteristics of the software product.
- B. User experience relates to people's perceptions and responses; usability relates to characteristics of the software product.
- C. There is no difference between user experience and usability, they are the same.
- D. Usability is evaluated via reviews; the user experience is evaluated via surveys

Answer: B

Explanation:

The main difference between user experience and usability is that user experience relates to people's perceptions and responses when using or anticipating using a system or component, while usability relates to characteristics of the software product that enable it to be used effectively, efficiently, and satisfactorily under specified conditions. NEW QUESTION # 18

Supercar is an online vehicle sales website specialising in a single manufacturer's Sports Utility Vehicles (SUVs) and saloons. A vehicle has two key elements, power unit and body style. The manufacturer offers three choices of power unit: petrol, diesel and hybrid. There are 3 mam body styles Saloon, Hatchback and SUV SUVs only come as petrol and diesel options Hybrid is available for Hatchback only. The site will allow an order to be processed if at least one of the chosen vehicle configurations is in stock, otherwise a message will be displayed asking the user to try again later As a Test Analyst you are asked to review the Supercar specification before starting to design the corresponding usability test cases. Which of the comments below should you make?

- A. It is not clear which message will be displayed when the car is "out of stock"
- B. I have no comments, specification looks OK
- C. Boundaries for stock levels are ambiguous.
- D. Dependencies between power unit and body style are ambiguous

Answer: C

Explanation:
The comment that should be made about the Supercar specification is that boundaries for stock levels are ambiguous. The specification states that the site will allow an order to be processed if at least one of the chosen vehicle configurations is in stock, but it does not define what constitutes "in stock" or how many units are available for each configuration. This makes the specification unclear and inconsistent, as it does not provide enough information for testing or implementation. NEW QUESTION # 19

Which test technique is MOST closely associated with classification tree diagrams?
SELECT ONE OPTION

- A. Use case testing
- B. Decision table testing
- C. State transition testing
- D. Equivalence partitioning

Answer: D

Explanation:
Comprehensive and Detailed in Depth Explanation:
* Classification tree diagrams are used to visualize combinations of input classes or partitions, helping in identifying and selecting test cases.
* They are closely associated with Equivalence Partitioning because they help in identifying classes (partitions) and their combinations.
* State transition testing (A) involves states and transitions, not combinations of classes.
* Decision table testing (C) involves logical conditions and outcomes, rather than class combinations.
* Use case testing (D) focuses on user interactions and scenarios.
Therefore, the correct answer is B (Equivalence partitioning).

NEW QUESTION # 20

A tablet manufacturer offers the following options for its customers:
* Colour: Black, White, Silver, Gold
* Model: Standard, Mini, Pro
* Gigabytes: 32, 64, 128, 256
* Connectivity: Wifi-only, Wifi+Cellular
When applying the pairwise test technique, how many TEST CASES would be needed to ensure that ALL pair combinations are tested?
SELECT ONE OPTION

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:
Comprehensive and Detailed in Depth Explanation:
Pairwise testing is a combinatorial test design technique in which test cases are designed to execute all possible discrete combinations of each pair of input parameters. This technique significantly reduces the number of test cases compared to exhaustive testing while still covering pairwise interactions.
To calculate the number of test cases:
* Colour: 4 options
* Model: 3 options
* Gigabytes: 4 options
* Connectivity: 2 options
Pairwise testing does not necessarily involve multiplying all options, as it aims to cover all pairs. Using an orthogonal array or pairwise tool, the minimum number of test cases that cover all pairs for these parameters is
16. Hence, the answer isC (16).

NEW QUESTION # 21
When would the Test Analyst's involvement in an Agile project normally start?
SELECT ONE OPTION

- A. As soon as the user stories have been signed-off
- B. At the beginning of the first iteration
- C. In parallel with coding for the first iteration
- D. At the beginning of the project

Answer: D

Explanation:
Comprehensive and Detailed in Depth Explanation:
InAgile projects, theTest Analyst's involvementtypically startsat the beginning of the project.
* Test Analysts workcollaboratively with developers, product owners, and other team membersfrom the outset to ensure thattesting is integrated into the development process.
* Option A (Beginning of the first iteration)is too late since planning and discussing test approaches begin earlier.
* Option B (After signing off user stories)contradicts the Agile principle of continuous involvement.
* Option C (In parallel with coding)also occurs too late since testing considerations should start during planning.
The correct answer isD (At the beginning of the project).
