

Latest Microsoft AZ-104 Test Objectives & Interactive AZ-104 Practice Exam

Microsoft AZ-104 Questions with 100% Correct Answers | Latest Version 2024 | Expert Verified | Ace the Test

You have an Azure subscription that contains 10 virtual networks. The virtual networks are hosted in separate resource groups. Another administrator plans to create several network security groups (NSGs) in the subscription. You need to ensure that when an NSG is created, it automatically blocks TCP port 8080 between the virtual networks.

Solution: From the Resource providers blade, you unregister the Microsoft.ClassicNetwork provider.

Does this meet the goal?

No

You have a Microsoft 365 tenant and an Azure Active Directory (Azure AD) tenant named contoso.com. You plan to grant three users named User1, User2, and User3 access to a temporary Microsoft SharePoint document library named Library1. You need to create groups for the users. The solution must ensure that the groups are deleted automatically after 180 days. Which two groups should you create? Each correct answer presents a complete solution.

Multiple answers

1) An office 365 group that uses the Assigned membership type.

2) An office 365 group that uses the Dynamic User membership type.

You have an Azure Active Directory (Azure AD) tenant named contoso.com that contains the users shown in the following table.

It is universally accepted that in this competitive society in order to get a good job we have no choice but to improve our own capacity and explore our potential constantly, and try our best to get the related AZ-104 certification is the best way to show our professional ability, however, the AZ-104 Exam is hard nut to crack but our AZ-104 preparation questions are closely related to the exam, it is designed for you to systematize all of the key points needed for the AZ-104 exam.

To be eligible for the exam, candidates need to have a solid understanding of Azure services, such as virtual machines, storage accounts, and Azure Active Directory. They should also have experience with Azure portal, Azure PowerShell, and Azure CLI. Candidates who pass the AZ-104 Certification Exam will demonstrate their ability to manage Azure resources, implement and manage storage, configure and manage virtual networks, and monitor and backup Azure resources.

Latest AZ-104 Test Objectives & Microsoft Interactive AZ-104 Practice Exam: Microsoft Azure Administrator Pass Certify

The software version is one of the three versions of our AZ-104 actual exam, which is designed by the experts from our company.

The functions of the software version are very special. For example, the software version can simulate the real exam environment. If you buy our AZ-104 study questions, you can enjoy the similar real exam environment. In addition, the software version of our study materials is not limited to the number of the computer. So do not hesitate and buy our AZ-104 Preparation exam, you will benefit a lot from it and pass the AZ-104 exam for sure.

Microsoft Azure is one of the most popular and widely used cloud computing services in the world. It provides a wide range of services and solutions to help organizations of all sizes to build, manage, and deploy applications and services in the cloud. To become a proficient Azure administrator, you'll need to have a strong understanding of various Azure services, tools, and technologies. That's where the Microsoft AZ-104 Certification Exam comes in.

Microsoft Azure Administrator Sample Questions (Q425-Q430):

NEW QUESTION # 425

You have an Azure subscription that contains an Azure Service Bus named Bus1.

Your company plans to deploy two Azure web apps named App1 and App2. The web apps will create messages that have the following requirements:

Each message created by App1 must be consumed by only a single consumer. Each message created by App2 will be consumed by multiple consumers.

Which resource should you create for each web app? To answer, drag the appropriate resources to the correct web apps. Each resource may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Resource

A Service Bus queue

A Service Bus topic

An Azure Event Grid topic

Azure Blob storage

Answer Area

App1

App2

Answer:

Explanation:

The screenshot shows the Microsoft Azure portal interface for Question 425. On the left, under the 'Resource' heading, there are four draggable boxes: 'A Service Bus queue', 'A Service Bus topic', 'An Azure Event Grid topic', and 'Azure Blob storage'. On the right, under the 'Answer Area' heading, there are two input fields for 'App1' and 'App2'. The 'App1' field contains 'A Service Bus queue' and the 'App2' field contains 'A Service Bus topic'.

<https://docs.microsoft.com/en-us/azure/service-bus-messaging/service-bus-queues-topics-subscriptions>

NEW QUESTION # 426

You have an Azure subscription named Subscription1. You have a virtualization environment that contains the virtualization server in the following table.

Name	Hypervisor	Running virtual machine
Server1	Hyper-V	VM1, VM2, VM3
Server2	VMWare	VMA, VMB, VMC

The virtual machines are configured as shown on the following table.

Name	Generation	Memory	Operating System (OS) disk	Data disk	OS
VM1	1	4 GB	200 GB	800 GB	Windows Server 2012 R2
VM2	1	12 GB	12 GB	200 GB	Red Hat Enterprise Linux 7.2
VM3	2	32 GB	100 GB	1 TB	Windows Server 2016
VMA	<i>Not applicable</i>	8 GB	100 GB	2 TB	Windows Server 2012 R2
VMB	<i>Not applicable</i>	16 GB	150 GB	1 TB	Red Hat Enterprise Linux 7.2
VMC	<i>Not applicable</i>	24 GB	500 GB	6 TB	Windows Server 2016

All the virtual machines use basic disks. VM1 is protected by using BitLocker Drive Encryption (BitLocker). You plan to use Azure Site Recovery to migrate the virtual machines to Azure.

Which virtual machines can you migrate? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Virtual machines that can be migrated from Server1.

- ☐ VM1 only
- ☐ VM2 only
- ☐ VM3 only
- ☐ VM1 and VM2 only
- ☐ VM1 and VM3 only
- ☐ VM1, VM2, and VM3

Virtual machines that can be migrated from Server2.

- ☐ VMA only
- ☐ VMB only
- ☐ VMC only
- ☐ VMA and VMB only
- ☐ VMA and VMC only
- ☐ VMA, VMB, and VMC

Answer:

Explanation:

Virtual machines that can be migrated from Server1.

- VM1 only
- VM2 only
- VM3 only**
- VM1 and VM2 only
- VM1 and VM3 only
- VM1, VM2, and VM3

Virtual machines that can be migrated from Server2.

- VMA only
- VMB only
- VMC only
- VMA and VMB only**
- VMA and VMC only
- VMA, VMB, and VMC

Explanation:

Not VM1 because it has BitLocker enabled.

Not VM2 because the OS disk is larger than 2TB.

Not VMC because the Data disk is larger than 4TB.

<https://docs.microsoft.com/en-us/azure/site-recovery/hyper-v-azure-support-matrix#azure-vm-requirements>

NEW QUESTION # 427

You have an Azure subscription named Subscription1. Subscription1 contains two Azure virtual machines named VM1 and VM2. VM1 and VM2 run Windows Server 2016.

VM1 is backed up daily by Azure Backup without using the Azure Backup agent.

VM1 is affected by ransomware that encrypts data.

You need to restore the latest backup of VM1.

To which location can you restore the backup? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

You can perform a file recovery of VM1 to:

- VM1 only
- VM1 or a new Azure virtual machine only
- VM1 and VM2 only
- A new Azure virtual machine only
- Any Windows computer that has Internet connectivity

You can restore VM1 to:

- VM1 only
- VM1 or a new Azure virtual machine only
- VM1 and VM2 only
- Any Windows computer that has Internet connectivity

Answer:

Explanation:

You can perform a file recovery of VM1 to:

VM1 only
VM1 or a new Azure virtual machine only
VM1 and VM2 only
A new Azure virtual machine only
Any Windows computer that has Internet connectivity

You can restore VM1 to:

VM1 only
VM1 or a new Azure virtual machine only
VM1 and VM2 only
Any Windows computer that has Internet connectivity

Explanation

Box 1 : VM1 and VM2 only

When recovering files, you can't restore files to a previous or future operating system version. You can restore files from a VM to the same server operating system, or to the compatible client operating system. Therefore -

"VM1 and VM2 only" is the best answer since both run on Windows Server 2016.

"A new Azure virtual machine only", this will also work but why to create unnecessary new VM in Azure if existing VM will do the task. So this option is incorrect.

Box 2 : VM1 or A new Azure virtual machine only

When restoring a VM, you can't use the replace existing VM option for encrypted VMs. This option is only supported for unencrypted managed disks. And also You can restore files from a VM to the same server operating system, or to the compatible client operating system only. Hence "VM1 or A new Azure virtual machine only" is correct answer.

Answer Area

You can perform a file recovery of VM1 to:

VM1 only
VM1 or a new Azure virtual machine only
VM1 and VM2 only
A new Azure virtual machine only
Any Windows computer that has Internet connectivity

You can restore VM1 to:

VM1 only
VM1 or a new Azure virtual machine only
VM1 and VM2 only
Any Windows computer that has Internet connectivity

NEW QUESTION # 428

You need to identify the storage requirements for Contoso.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
Contoso requires a storage account that supports Blob storage.	<input type="radio"/>	<input type="radio"/>
Contoso requires a storage account that supports Azure Table storage.	<input type="radio"/>	<input type="radio"/>
Contoso requires a storage account that supports Azure File Storage.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Statements	Yes	No
Contoso requires a storage account that supports Blob storage.	<input checked="" type="radio"/>	<input type="radio"/>
Contoso requires a storage account that supports Azure Table storage.	<input type="radio"/>	<input checked="" type="radio"/>
Contoso requires a storage account that supports Azure File Storage.	<input type="radio"/>	<input checked="" type="radio"/>

Statement 1: Yes

Contoso is moving the existing product blueprint files to Azure Blob storage which will ensure that the blueprint files are stored in the archive storage tier.

Use unmanaged standard storage for the hard disks of the virtual machines. We use Page Blobs for these.

Statement 2: No

Azure Table storage stores large amounts of structured data. The service is a NoSQL datastore which accepts authenticated calls from inside and outside the Azure cloud. Azure tables are ideal for storing structured, non-relational data. Common uses of Table storage include:

1. Storing TBs of structured data capable of serving web scale applications
2. Storing datasets that don't require complex joins, foreign keys, or stored procedures and can be denormalized for fast access
3. Quickly querying data using a clustered index
4. Accessing data using the OData protocol and LINQ queries with WCF Data Service .NET Libraries

Statement 3: No File Storage can be used if your business use case needs to deal mostly with standard File extensions like

*.docx, *.png and *.bak then you should probably go with this storage option.

NEW QUESTION # 429

You have an Azure virtual machine that runs Windows Server 2019 and has the following configurations:

Name: VM1

Location: West US

Connected to: VNET1

Private IP address: 10.1.0.4

Public IP address: 52.186.85.63

DNS suffix in Windows Server: Adatum.com

You create the Azure DNS zones shown in the following table.

Name	Type	Location
Adatum.pri	Private	West Europe
Contoso.pri	Private	Central US
Adatum.com	Public	West Europe
Contoso.com	Public	North Europe

You need to identify which DNS zones you can link to VNET1 and the DNS zones to which VM1 can automatically register. Which zones should you identify? To answer, select the appropriate options in the answer area.

DNS zones that you can link to VNET1:

Adatum.com only
 Adatum.pri and adatum.com only
 The private zones only
 The public zones only

DNS zones to which VM1 can automatically register:

Adatum.com only
 Adatum.pri and adatum.com only
 The private zones only
 The public zones only

Answer:

Explanation:

DNS zones that you can link to VNET1:

Adatum.com only
 Adatum.pri and adatum.com only
 The private zones only
 The public zones only

DNS zones to which VM1 can automatically register:

Adatum.com only
 Adatum.pri and adatum.com only
 The private zones only
 The public zones only
