Actual AB-730 Test | Practice AB-730 Exams Free

Our AB-730 Study Materials are compiled by domestic first-rate experts and senior lecturer and the contents of them contain all the important information about the test and all the possible answers of the questions which maybe appear in the test. You can use the practice test software to check your learning outcomes. Our AB-730 study materials' self-learning and self-evaluation functions, the statistics report function, the timing function and the function of stimulating the test could assist you to find your weak links, check your level, adjust the speed and have a warming up for the real exam. You will feel your choice to buy Microsoft Certified study materials are too right.

Microsoft AI Business Professional Sample Questions (Q42-Q47):

NEW QUESTION # 42

Hotspot Question

What are two limitations of prompt scheduling in Microsoft 365 Copilot? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

□ Explanation:

Box 1: Once per day

You can schedule the prompt to run as often as:

In Microsoft 365 Copilot, you can schedule prompts with the following frequency and run limits:

Recurring Frequencies: You can set prompts to run daily, weekly, or monthly.

Run Limit: A single scheduled prompt can run for a maximum of 15 iterations. Once this limit is reached, the schedule stops, and you must manually restart or recreate it.

Active Prompts Limit: Users are typically limited to having 10 active scheduled prompts at any given time.

Box 2: 15 times

The maximum number of times that a schedule prompt can run is

NEW QUESTION # 43

Select the answer that correctly completes the sentence.

□

Answer:

Explanation:

□ Explanation:

a specific date range of activity

The Microsoft 365 My Account portal provides users with control over their Copilot activity history in alignment with enterprise privacy and compliance standards. When selecting Delete history, users can remove Copilot activity based on a defined time range rather than deleting only a single conversation or all activity universally.

This functionality reflects Microsoft's commitment to transparency, user control, and responsible AI governance. Allowing deletion by date range enables organizations and individuals to manage data retention policies efficiently while maintaining compliance with regulatory frameworks such as GDPR and internal data governance policies.

The other options are incorrect because deleting a specific conversation or all conversations with a specific agent is not the primary method offered in the My Account activity deletion setting. Instead, deletion is structured around activity time periods.

This capability reinforces generative AI best practices: secure data management, lifecycle control of AI interactions, and user-directed privacy management within enterprise environments.

NEW QUESTION # 44

You have an open Microsoft 365 Copilot conversation.

You need to chat with an agent named Agent1 during the conversation.

What should you enter to call Agent1?

- A. #Agent1
- B. /Agent1
- C. [Agent1]
- D. @Agent1

Answer: D

Explanation:

Comprehensive and Detailed 150 to 200 words of Explanation Microsoft AI Business professional documents:

In Microsoft 365 experiences, the standard way to invoke or reference people and specific resources in- context is by using the @mention pattern. Microsoft 365 Copilot extends this familiar interaction model to agents: when you want to switch to, invoke, or direct a question to a specific agent from within an existing Copilot conversation, you use @ followed by the agent's name. This makes the agent selection explicit and reduces ambiguity about which assistant or capability you want to use for the next turn.

The other syntaxes listed are commonly associated with different systems: square brackets are not used for agent invocation, hashtags are typically used for topics/tags, and slash commands are used in some chat applications for command execution-but they are not the standard method for calling a Copilot agent in Microsoft 365 Copilot Chat.

Therefore, to chat with an agent named Agent1 during an open Copilot conversation, you should enter @Agent1.

NEW QUESTION # 45

You are a project coordinator for a small consulting firm.

You are responsible for tracking client communications, managing project timelines, and preparing weekly status updates for internal stakeholders.

You have a Microsoft 365 Copilot license.

You create an agent to help you monitor project milestones, follow up on client emails, and generate weekly summary reports.

With whom can you share the agent?

- A. any person who has a valid email address
- B. the people in your organization and people that have personal Microsoft accounts
- **C. only the people in your organization**
- D. only Microsoft Teams channel members

Answer: C

Explanation:

Microsoft 365 Copilot agents operate within the security, compliance, and identity boundaries of a Microsoft 365 tenant. Custom agents created in the Microsoft 365 Copilot app are governed by organizational policies, role-based access control, and Microsoft Entra ID authentication.

According to Microsoft AI Business Professional guidance, Copilot agents are designed for enterprise use and are shared within the organization unless administrators configure broader sharing capabilities. External sharing with personal Microsoft accounts or arbitrary email addresses is not supported by default due to security, data protection, and compliance requirements.

Because the agent in this scenario interacts with organizational data such as client emails, project milestones, and internal reports, access must remain restricted to authenticated users within the same tenant. This ensures that sensitive business information remains protected and that data access respects existing permissions.

Therefore, the agent can be shared only with people in your organization, making option D the correct answer.

NEW QUESTION # 46

You join an internal Microsoft Teams meeting late and want to catch up on what you missed. The meeting is being recorded. You need to summarize the portion of the meeting that you missed as soon as possible.

What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. From the Microsoft 365 Copilot app, ask Copilot to tell you what you missed.
- B. From the meeting, read the transcript.
- **C. From the Teams app, ask Copilot in Teams to summarize what you missed so far.**
- D. From the Teams app, view the intelligent recap.

Answer: C

Explanation:

Microsoft 365 Copilot in Teams is designed to provide real-time meeting assistance, including summarizing discussions, identifying key decisions, and highlighting action items. When joining a meeting late, the most efficient and immediate method to catch up is to directly prompt Copilot within the Teams meeting experience.

Option A is the best answer because Copilot in Teams can summarize what has occurred so far during the live meeting. It leverages the meeting transcript, speaker attribution, and contextual signals to generate a concise, structured summary in real time. This minimizes delay and provides actionable insights instantly.

Reading the transcript (Option B) would require manual review and is not the fastest method. Intelligent recap (Option D) is typically available after the meeting concludes and processes recording data. Asking Copilot from the separate Microsoft 365 Copilot app (Option C) may not provide immediate, in-meeting contextual awareness.

Therefore, the fastest and most effective approach is to ask Copilot in Teams to summarize what you missed.

NEW QUESTION # 47

.....

For most IT workers, having the aspiration of getting Microsoft certification are very normal, passing AB-730 actual test means you have chance to enter big companies and meet with extraordinary people from all walks of life. The AB-730 Real Questions from our website are best study materials for you to clear exam in a short time.
