We are pleased to inform you that we have engaged in this business for over ten years with our Advanced HPE Storage Integrator Solutions Written Exam HPE7-J02 exam questions. Because of our experience, we are well qualified to take care of your worried about the HPE7-J02 Preparation exam and smooth your process with successful passing results.

If you fail HPE7-J02 exam unluckily, don't worry about it, because we provide full refund for everyone who failed the exam. You can ask for a full refund once you show us your unqualified transcript to our staff. The whole process is time-saving and brief, which would help you pass the next HPE7-J02 Exam successfully. Please contact us through email when you need us. The HPE7-J02 question dumps produced by our company, is helpful for our customers to pass their exams and get the HPE7-J02 certification within several days. Our HPE7-J02 exam questions are your best choice.

## Validate Your Skills with HP HPE7-J02 Exam Questions

Dumps4PDF is famous for its high-quality in this field especially for HPE7-J02 certification exams. It has been accepted by thousands of candidates who practice our HPE7-J02 study materials for their exam. In this major environment, people are facing more job pressure. So they want to get a HPE7-J02 Certification rise above the common herd. How to choose valid and efficient guide torrent should be the key topic most candidates may concern. And with our HPE7-J02 exam questions, you will pass the HPE7-J02 exam without question.

## HP Advanced HPE Storage Integrator Solutions Written Exam Sample Questions (Q30-Q35):

### NEW QUESTION # 30

While attempting to increase an upstream volume size for an Alletra 6000 Peer Persistence setup from local web management, you are facing an error that prevents you from completing the task.  
Which action is required to complete the task successfully?

- A. Remove the downstream volume, volume collection before increasing the upstream volume.
- B. Increase the size of the volume in VMware HPE Storage plugin.
- C. Remove the upstream volume, volume collection before increasing the upstream volume.
- D. Use the Data Services Cloud Console to grow the upstream volume.

**Answer: D**

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

In Alletra 6000 Peer Persistence environments, operations like resizing Peer Persistence volumes must be performed via the HPE Data Services Cloud Console (DSCC), which manages volume collections and replication consistency groups. Attempting to grow the upstream volume locally will fail because the changes need to propagate across both sites consistently.

Distractors:

A/B: Removing upstream or downstream volumes would break replication and is not required.

D: Expanding in VMware only extends the VMFS datastore, not the underlying replicated volume.

Key Concept: Peer Persistence volume resizing is done in DSCC, not local web GUI.

### NEW QUESTION # 31

The storage solution based on the exhibit is deployed at a customer site.

How can the sequential read performance be enhanced with this setup?

- A. By increasing the amount of 10Gb NICs
- B. By adding more NVMe media to the solution
- C. By upgrading the nodes to 32-core IOMs
- D. By adding a third node to the solution

Answer: A

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

The exhibit shows an Alletra MP configuration delivering ~4.6 GB/s (256 KB sequential read) with four 10 Gb host ports. That throughput is close to the aggregate front-end bandwidth ceiling of  $4 \times 10$  GbE (#5 GB/s raw, less with protocol overhead). For large-block sequential workloads, the front-end link budget is often the bottleneck; adding additional 10 GbE ports (or moving to higher-speed links) increases available host bandwidth and raises sustained sequential read throughput. This aligns with HPE sizing guidance: scale host connectivity to meet sequential throughput targets before adding media.

Analysis of Incorrect Options (Distractors):

B: Adding a third node isn't applicable to a 2-node HA block pair and would not address a front-end bandwidth limit.

C: More controller cores don't raise link-level throughput if host I/O is already constrained by port bandwidth.

D: Adding NVMe media primarily boosts IOPS/parallelism; sequential read is bounded here by front-end ports.

Key Concept: Sequential throughput is front-end bandwidth bound; scale host ports to increase GB/s.

### NEW QUESTION # 32

Your customer has expressed an interest in an HPE CloudPhysics assessment of their environment. They would like to know what to expect from this process.

Which of the following statements is true of a CloudPhysics assessment?

- A. The assessment period lasts for 5 business days.
- B. Your customer can only access a partial view of the results.
- C. Some assessment results are visible in only 2 hours.
- D. An auto-generated token from HPE is required to view the results.

Answer: C

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

HPE CloudPhysics begins collecting performance and capacity data immediately after deployment of the Observer VM/collector.

Some initial assessment results (e.g., environment inventory, early utilization stats) can be visible within 2 hours, while deeper trending insights require longer data collection (days/weeks).

Distractors:

B: Tokens are not required for customers to view results; reports are available via the portal.

C: Customers get a full dashboard view of results, not partial.  
D: Assessments can run for longer periods (days-weeks), not fixed at 5 days.  
Key Concept: CloudPhysics delivers initial insights within hours.

### NEW QUESTION # 33

You are working with a customer to upgrade their backup target environment and they are interested in HPE StoreOnce. Which HPE tool should you use to size and configure a solution for this customer?

- A. HPE Ninja Online
- B. HPE CloudPhysics
- **C. HPE NinjaSTARS**
- D. One Config Advanced

**Answer: C**

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

HPE NinjaSTARS (Storage Assessment and Right Sizing) is the dedicated HPE tool for sizing and configuring StoreOnce backup appliances. It evaluates backup datasets, retention policies, deduplication ratios, and replication to recommend the right StoreOnce model and configuration.

Distractors:

A (CloudPhysics): Used for virtual infrastructure and block storage assessments, not backup target sizing.

C (Ninja Online): General sizing tool, not specific for StoreOnce.

D (OCA): Used for quoting/configuration, but sizing requires NinjaSTARS first.

Key Concept: HPE NinjaSTARS is the StoreOnce sizing tool.

Reference: HPE NinjaSTARS Backup Sizing Tool Guide.

### NEW QUESTION # 34

A mid-sized enterprise needs a file storage solution that offers scalable storage and integrated data protection, backup, and disaster recovery.

Which solution best meets the company's needs?

- A. Scality
- **B. HPE GreenLake for File Storage**
- C. Cohesity
- D. Qumulo

**Answer: B**

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

HPE GreenLake for File Storage (powered by VAST Data) delivers scale-out NAS capabilities with native data protection, snapshots, and disaster recovery integration. It is designed for enterprises that need both scalability and integrated protection in a single consumption or CapEx model.

Distractors:

A (Qumulo): Excellent scale-out file, but lacks deep HPE ecosystem integration.

B (Scality): Primarily focused on object storage, not file workloads.

D (Cohesity): Strong in backup and secondary storage, but not primary enterprise file services.

Key Concept: HPE GreenLake for File Storage = enterprise-grade file storage + integrated protection.

Reference: HPE GreenLake for File Storage Overview.
