AZ-500 Reliable Dumps Files - AZ-500 Valid Exam Review

Our AZ-500 Learning Materials have all kinds of AZ-500 exam dumps for different exams. And our customers are from the different countries in the world. They give many feedbacks for the AZ-500 exam dumps, as well as express their thanks for helping them pass the exam successfully. You just need to try the free demo of us, you will know the advantage. We will help you to pass the exam and money back guarantee if you can't pass it.

Microsoft Azure Security Technologies Sample Questions (Q166-Q171):

NEW QUESTION # 166

You have an Azure subscription named Sub1 that contains the virtual machines shown in the following table.

You need to ensure that the virtual machines in RG1 have the Remote Desktop port closed until an authorized user requests access. What should you configure?

- A. Azure Active Directory (Azure AD) Privileged Identity Management (PIM)
- B. Azure Active Directory (Azure AD) conditional access
- C. just in time (JIT) VM access
- D. an application security group

Answer: C

Explanation:

Just-in-time (JIT) virtual machine (VM) access can be used to lock down inbound traffic to your Azure VMs, reducing exposure to attacks while providing easy access to connect to VMs when needed.

Note: When just-in-time is enabled, Security Center locks down inbound traffic to your Azure VMs by creating an NSG rule. You

select the ports on the VM to which inbound traffic will be locked down. These ports are controlled by the just-in-time solution. When a user requests access to a VM, Security Center checks that the user has Role-Based Access Control (RBAC) permissions that permit them to successfully request access to a VM. If the request is approved, Security Center automatically configures the Network Security Groups (NSGs) and Azure Firewall to allow inbound traffic to the selected ports and requested source IP addresses or ranges, for the amount of time that was specified. After the time has expired, Security Center restores the NSGs to their previous states. Those connections that are already established are not being interrupted, however.

NEW QUESTION # 167

You have an Azure subscription that contains the storage accounts shown in the following table.

You enable Microsoft Defender for Storage.

Which storage services of storages are monitored by Microsoft Defender for Storage, and which storage accounts are protected by Microsoft Defender for Storage? To answer, select the appropriate options in the answer area.

Answer:

Explanation:

see the answer below in explanation.

Explanation:

Answer as below.

NEW QUESTION # 168

You need to deploy Microsoft Antimalware to meet the platform protection requirements.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

1. DeployifNotExists

2. Scope

NEW QUESTION # 169

You have an Azure Container Registry named ContReg1 that contains a container image named image1.

You enable content trust for ContReg1.

After content trust is enabled, you push two images to ContReg1 as shown in the following table.

Which images are trusted images?

- A. image1 and image2 only
- **B. image2 only**
- C. image1, image2, and image3

Answer: B

Explanation:

Azure Container Registry implements Docker's content trust model, enabling pushing and pulling of signed images.

To push a trusted image tag to your container registry, enable content trust and push the image with docker push.

To work with trusted images, both image publishers and consumers need to enable content trust for their Docker clients. As a publisher, you can sign the images you push to a content trust-enabled registry.
