We give 100% money back guarantee if our candidates will not satisfy with our Health-Cloud-Accredited-Professional vce braindumps.

Salesforce Health-Cloud-Accredited-Professional (Health Cloud) exam is a certification program designed for individuals who wish to demonstrate their expertise in the Salesforce Health Cloud platform. Salesforce Health Cloud Accredited Professional certification is ideal for healthcare providers, medical professionals, and IT experts who want to expand their knowledge and skills in managing healthcare data and patient information. The Health Cloud Accredited Professional certification is recognized globally as a reliable benchmark for healthcare professionals.

Achieving the Salesforce Health Cloud Accredited Professional certification is a valuable asset for healthcare professionals looking to differentiate themselves in a competitive job market. It demonstrates a commitment to excellence and a deep understanding of the Salesforce Health Cloud platform, making certified professionals highly sought after by healthcare organizations looking to improve their technology infrastructure and patient care.

Salesforce Health Cloud Accredited Professional Sample Questions (Q23-Q28):

NEW QUESTION # 23
While setting up Advanced Therapy Management, a consultant wants to have patients associated to Care Programs during enrollment. They need to customize the Health Cloud enrollment process to match their customer's process.
What should the consultant clone to customize for the customer, while leveraging out- of-the-box Health Cloud functionality?

- A. FlexCard
- B. OmniScript
- C. Apex Class
- D. Flow

Answer: B

Explanation:
In Salesforce Health Cloud Advanced Therapy Management (ATM), the enrollment process for associating patients to Care Programs is driven by OmniStudio OmniScripts.
* Salesforce provides out-of-the-box OmniScripts for patient enrollment.
* Best practice: Instead of building from scratch, you clone the delivered OmniScript and then customize it to align with your customer's unique enrollment process.
* This approach ensures you continue to leverage Health Cloud's standard functionality while tailoring the process flow.
Why not the others?
* A. FlexCard - Displays patient/care program info but doesn't handle the guided enrollment process.
* B. Flow - Standard Salesforce Flows are not used for ATM enrollment; Health Cloud leverages OmniScripts for these guided workflows.
* C. Apex Class - Only needed for custom logic; cloning Apex is not recommended for configuration
/customization here.
Salesforce Health Cloud Reference:
Salesforce Health Cloud Implementation Guide - Advanced Therapy Management:
"Enrollment processes for patients into Care Programs are delivered as OmniScripts. To customize these processes, clone the standard OmniScript and modify it to meet your business needs."

NEW QUESTION # 24
How does an administrator display device information on a patient card?

- A. Create a custom field on the EHR_MedicalDevices with a formula that returns the nf ormauon to display on patient card
- B. Create a custom fieldon the FilterCondition_c with a formula that returns the information to display on patient card
- C. Create an Asset record and create a Care Registered Device record that looks up to the Asset record and then looks up to the Account record for the Patient
- D. Create acustom field on the EHR_Patient object with a formula that returns the information to display on patient card
- E. Create a custom field on the EHR_DeviceRequest with a formula that returns the information to display on patient card

Answer: C

NEW QUESTION # 25

A customer wants to leverage dependent intervention tasks as part of their care coordination solution using Integrated Care Management.

Which feature should a consultant configure to accomplish this task?

- A. Intervention Templates
- B. Industry Template Library
- C. Care Plan Task Templates
- D. Action Plan Templates

Answer: D

Explanation:
* Dependent Intervention Tasks:
Exact Extract:
"Action Plan Templates allow you to define and manage dependent intervention tasks for integrated care management workflows, enabling conditional task sequencing." Reference:
* Other Options:
Industry Template Library: Repository of templates, not task logic.
Intervention Templates and Care Plan Task Templates: Do not provide logic for dependent/conditional tasks within a care plan.

NEW QUESTION # 26

A medical device organization needs to track account information and its geographical details to provide information to representatives onsite.
Which three objects support this scenario?
Choose 3 answers

- A. Clinic Location
- B. Healthcare Facility
- C. Location
- D. Facility Address

Answer: B,C,D

Explanation:
In Salesforce Health Cloud, when an organization needs to track account information along with geographical details (like facilities, addresses, and locations), the following objects are used:
A . Location
A standard object in Salesforce used to store physical location data such as addresses, latitude/longitude, and site details.
Useful for mapping and onsite representative visits.
B . Healthcare Facility
Represents the organization's clinical facilities (hospitals, clinics, labs, etc.).
Connected to Accounts to model the healthcare network.
C . Facility Address
Stores detailed address information for a healthcare facility.
Provides geographical data needed by onsite reps.
Why not D. Clinic Location?
Clinic Location is not a standard Health Cloud object. The correct objects are Healthcare Facility + Facility Address + Location to track facility and geographical details.
Salesforce Health Cloud Reference:
* Salesforce Health Cloud Provider Data Model:
"Use the Healthcare Facility object to represent hospitals, clinics, and other care sites."
"Use the Facility Address object to store location-specific details about healthcare facilities."
"The Location object stores standardized address and geographic information."

NEW QUESTION # 27

Which three are steps required to configure Health Cloud? (Choose three.)

- A. Verify that Chatter Is enabled.
- B. Enable the option for contacts to relate to multiple accounts.
- C. Install the Health Cloud Managed Package.
- D. Configure the console view.
- E. Install Health Cloud Unmanaged Packages.

Answer: B,C,D

Explanation:
To configure Health Cloud, the following steps are required1:
Enable the option for contacts to relate to multiple accounts. This feature allows contacts to be associated with more than one account, which is essential for modeling complex relationships in healthcare.
Install the Health Cloud Managed Package. This package contains the core objects, fields, tabs, components, and other elements that make up Health Cloud.
Configure the console view. This step involves customizing the Health Cloud console app to suit your needs and preferences. You can add or remove tabs, components, page layouts, and other features to optimize your user experience.
Verify that Chatter is enabled. Chatter is a collaboration tool that allows users to communicate and share information within Health Cloud. Chatter is enabled by default in most orgs, but you can check your settings to make sure.
Install Health Cloud Unmanaged Packages. These packages are optional and provide additional functionality for specific use cases, such as utilization management, care programs, or provider search.
