Free PDF Quiz Splunk - SPLK-1002 - Splunk Core Certified Power User Exam –Trustable Top Exam Dumps

Our SPLK-1002 study materials can have such a high pass rate, and it is the result of step by step that all members uphold the

concept of customer first. If you use a trial version of SPLK-1002 training prep, you can find that our study materials have such a high passing rate and so many users support it. After using the trial version, we believe that you will be willing to choose SPLK-1002 Exam Questions.

Splunk Core Certified Power User Exam Sample Questions (Q243-Q248):

NEW QUESTION # 243

How could the following syntax for the chart command be rewritten to remove the OTHER category? (select all that apply)

- A. | chart count over CurrentStanding by Action useother=f
- B. | chart count over CurrentStanding by Action usenull=f useother-t
- C. | chart count over CurrentStanding by Action limit-10
- D. | chart count over CurrentStanding by Action limit=10 useother=f

Answer: A,D

Explanation:

In Splunk, when using the chart command, the useother parameter can be set to false (f) to remove the 'OTHER' category, which is a bucket that Splunk uses to aggregate low-cardinality groups into a single group to simplify visualization. Here's how the options break down:

A. | chart count over CurrentStanding by Action useother=f

This command correctly sets the useother parameter to false, which would prevent the 'OTHER' category from being displayed in the resulting visualization.

B. | chart count over CurrentStanding by Action usenull=f useother=t

This command has useother set to true (t), which means the 'OTHER' category would still be included, so this is not a correct option.

C. | chart count over CurrentStanding by Action limit=10 useother=f

Similar to option A, this command also sets useother to false, additionally imposing a limit to the top 10 results, which is a way to control the granularity of the chart but also to remove the 'OTHER' category.

D. | chart count over CurrentStanding by Action limit-10

This command has a syntax error (limit-10 should be limit=10) and does not include the useother=f clause. Therefore, it would not remove the 'OTHER' category, making it incorrect.

NEW QUESTION # 244

What are the two parts of a root event dataset?

- A. Fields and attributes.
- B. Constraints and lookups.
- C. Constraints and fields.
- D. Fields and variables.

Answer: C
