

Valid Network-Security-Essentials Test Answers - Network-Security-Essentials Latest Exam Practice

Network Security Essentials Exam Guide

The Network Security Essentials exam tests your knowledge of basic networking and how to configure, manage, and monitor a WatchGuard Firebox. This exam is appropriate for network administrators who have experience configuring and managing Firebox devices that run Fireware v12.4.

Exam Overview

Key Concepts

To successfully complete the Network Security Essentials exam, you must understand these key concepts:

Fireware Knowledge

- Firebox activation and initial setup
- Network configuration
- Policy and proxy configuration
- Subscription services configuration
- User authentication
- Device monitoring, logging, and reporting
- Branch office and mobile VPN configuration

General Network and Security Knowledge

- IPv4 networking concepts (subnets, DNS, TCP/IP, DHCP, NAT, static routing)
- General understanding of firewalls

Are you tired of studying for the WatchGuard Network-Security-Essentials certification test without seeing any results? Look no further than ValidExam! Our updated Network-Security-Essentials Dumps questions are the perfect way to prepare for the exam quickly and effectively. With study materials available in three different formats, including desktop and web-based practice exams, you can choose the format that works best for you. With customizable exams and a real exam environment, our practice tests are the perfect way to prepare for the test pressure you will face during the final exam. Choose ValidExam for your WatchGuard Network-Security-Essentials Certification test preparation today!

If you want to get certified, you should use the most recent WatchGuard Network-Security-Essentials practice test. These Real Network-Security-Essentials Questions might assist you in passing this difficult test quickly because of how busy life routine is. Stop wasting more time. With real WatchGuard Network-Security-Essentials Dumps PDF, desktop practice test software, and a web-based practice test, ValidExam is here to help.

Network-Security-Essentials Latest Exam Practice, Valid Brindumps Network-Security-Essentials Questions

To make sure your situation of passing the certificate efficiently, our Network-Security-Essentials study materials are compiled by first-rank experts. So the proficiency of our team is unquestionable. They handpicked what the Network-Security-Essentials training

guide usually tested in exam recent years and devoted their knowledge accumulated into these Network-Security-Essentials Actual Tests. We are on the same team, and it is our common wish to help you realize it. So you can rely on us to success and we won't let you down!

WatchGuard Network Security Essentials for Locally-Managed Fireboxes Sample Questions (Q23-Q28):

NEW QUESTION # 23

The Audit Trail report shows information about Firebox configuration changes. How can you make sure the Audit Trail report includes the names of the specific person that made each change? (Select one.)

- A. Install the SSO Client on each computer used by Firebox administrators
- B. Configure your RADIUS server to send accounting messages to the Firebox
- C. Enable the Logging > AuditTrack feature
- D. Configure all Firebox administrators to use the Authentication Portal to log in to the Firebox
- E. Create unique device administrator accounts for each Firebox administrative user

Answer: E

Explanation:

To ensure that the Audit Trail report in Firebox includes the specific names of administrators making configuration changes, it is essential to have unique device administrator accounts. This setup allows each administrative action to be associated with a specific user, enabling detailed tracking of configuration modifications. By differentiating user accounts, the system can log the specific username associated with each change, fulfilling audit and compliance requirements.

NEW QUESTION # 24

Before packets are examined by Default Threat Protection, they are processed by firewall policies in top- down order.

- A. False
- B. True

Answer: B

Explanation:

In Firebox configuration, packets are processed by firewall policies in a top-down order before they reach Default Threat Protection. This ordering ensures that the firewall policies defined higher in the policy list take precedence. Packets are evaluated against each rule sequentially from top to bottom until a matching policy is found, which then determines the action taken (allow, deny, or inspect further). Only after this process will any unfiltered traffic be subject to Default Threat Protection for additional security checks.

NEW QUESTION # 25

You configured a Firebox for a school environment. Students must have more restricted access than teachers, and unauthenticated users cannot have any Internet access. You added Student and Teacher groups to your proxy policies that handle web traffic. Based on the image below, this configuration can accomplish your goals.

- A. False
- B. True

Answer: B

Explanation:

The image shows a configuration for a school environment with separate HTTP and HTTPS proxy policies for Students and Teachers. This separation allows for different levels of access control based on group membership, providing more restrictive access for students compared to teachers.

* Students are restricted by specific HTTP and HTTPS proxy policies, limiting their access to designated content and sites.

* Teachers have their own policies, which can be configured with more permissive rules.

* Unauthenticated users are not included in any policy, effectively blocking their internet access, as the firewall denies traffic not explicitly allowed by a policy.

This configuration meets the requirements by:

* Allowing teachers and students access as per their respective policies.

* Blocking unauthenticated users from internet access entirely.

NEW QUESTION # 26

Clients on the 10.0.10.0/24 network must connect to the server at 10.0.20.100. Based on this image, what static route must you add to the Firebox for traffic to reach the server? (Select one.)

- A. Route to 10.0.20.0/24, Gateway 10.0.2.254
- B. Route to 10.0.2.0/24, Gateway 10.0.2.1
- C. Route to 10.0.20.0/24, Gateway 10.0.2.254
- D. Route to 10.0.10.0/24, Gateway 10.0.0.1
- E. Route to 10.0.20.0/24, Gateway 10.0.2.1

Answer: A

Explanation:

In this network configuration:

* The Firebox needs a static route to direct traffic intended for the 10.0.20.0/24 network (where the server 10.0.20.100 resides).

* The gateway address that allows the Firebox to reach the 10.0.20.0/24 network is 10.0.2.254, which is the router's IP address on the 10.0.2.0/24 network.

By configuring a static route:

* Destination: 10.0.20.0/24

* Gateway: 10.0.2.254

This route instructs the Firebox to send traffic destined for the 10.0.20.0/24 network via the router at 10.0.2.254, enabling clients in the 10.0.10.0/24 network to reach the server.

* Option B is correct because it provides the correct destination and gateway for traffic to the 10.0.20.0/24 network.

* Option A incorrectly sets the route to 10.0.10.0/24, which doesn't address the server network.

* Options C and D set incorrect gateways (10.0.2.1), which do not route traffic correctly in this setup.

* Option E is a duplicate of B and would also be correct; thus, B and E are equivalent.

NEW QUESTION # 27

The Firebox can scan the contents of encrypted zip files with Gateway AntiVirus when HTTPS content inspection is enabled.

- A. True
- B. False

Answer: B

Explanation:

The Firebox cannot scan the contents of encrypted zip files even if HTTPS content inspection is enabled.

HTTPS content inspection allows the Firebox to inspect encrypted HTTPS traffic by decrypting it. However, the content within encrypted zip files remains inaccessible to Gateway AntiVirus scanning because the encryption key for the zip file is not available to the Firebox. This limitation is consistent with standard network security practices, where encrypted files need to be decrypted with a known key before content scanning can occur.

NEW QUESTION # 28

.....

You must want to know your scores after finishing exercising our Network-Security-Essentials study guide, which help you judge your revision. Now, our windows software and online test engine of the Network-Security-Essentials real exam can meet your requirements. You can choose from two modules: virtual exam and practice exam. Then you are required to answer every question of the Network-Security-Essentials Exam Materials. And they will show the scores at the time when you finish the exam.
