Veeam Certified Engineer v12 Sample Questions (Q80-Q85):

NEW QUESTION # 80
Veeam ONE has been installed and configured. The administrator needs to monitor the VMware datastore capacity. Where can this information be found?

- A. Under Infrastructure View, select the Datastores group and view the disk space.
- B. Under Infrastructure View, select all VMs to calculate the remaining datastore disk space.
- C. Under Business View, select VMs to see the total amount of used disk space.
- D. Under Business View, select Hosts to see each datastore and its disk space.

Answer: A

Explanation:
Veeam ONE is a monitoring and reporting tool for Veeam Backup & Replication, as well as virtual environments like VMware vSphere and Microsoft Hyper-V. In Veeam ONE, you can monitor the capacity of VMware datastores by using the "Infrastructure View". Within this view, there is a specific group for "Datastores" which provides comprehensive information, including the capacity and free space available on each datastore. This feature is designed to help administrators manage storage effectively and ensure they are alerted before reaching critical capacity limits.
The "Infrastructure View" provides a more direct and focused way to monitor resources like datastores compared to "Business View", which is typically used for categorizing and viewing the infrastructure based on business needs, rather than direct resource monitoring.

NEW QUESTION # 81
For general data protection regulation (GDPR) compliance, Veeam can add a location tag to which component?

- A. vCenter servers
- B. Cloud gateways
- C. WAN accelerators
- D. Guest interaction proxies

Answer: A

Explanation:
Veeam Backup & Replication offers the capability to assign location tags to different components within the backup infrastructure, including vCenter servers. This feature is particularly useful for GDPR compliance, as it allows administrators to specify the physical location of the data processed and stored within vCenter servers, helping to ensure that data sovereignty and regulatory requirements are met.

NEW QUESTION # 82

A company needs to restore a database server without restoring sensitive information due to data sovereignty requirements. How can the company meet this requirement?

- A. Configure a virtual lab and select Staged Restore mode in the restore wizard.
- B. Configure the virtual lab and select SureBackup mode in the restore wizard.
- C. Configure the SureRestore settings to prevent sensitive data restoration based on YARA rules.
- D. Configure the Secure Restore settings to prevent sensitive data restoration based on YARA rules.

Answer: A
