## CS0-003 Test Questions Fee - How to Prepare for CompTIA CS0-003: CompTIA Cybersecurity Analyst (CySA+) Certification Exam

It is very necessary for a lot of people to attach high importance to the CS0-003 exam. It is also known to us that passing the exam

is not an easy thing for many people, so a good study method is very important for a lot of people, in addition, a suitable study tool is equally important, because the good and suitable CS0-003 reference guide can help people pass the exam in a relaxed state. We are glad to introduce the CS0-003 Certification Dumps from our company to you. We believe our study materials will be very useful and helpful for all people who are going to prepare for the CS0-003 exam. There are a lot of excellent experts and professors in our company. In the past years, these experts and professors have tried their best to design the CS0-003 exam questions for all customers.

CompTIA CySA+ certification exam is a valuable credential for professionals looking to enhance their knowledge and skills in the cybersecurity domain. It validates an individual's ability to identify and mitigate cybersecurity threats, vulnerabilities and risks. CompTIA Cybersecurity Analyst (CySA+) Certification Exam certification is globally recognized, vendor-neutral and is a requirement for many cybersecurity roles. If you are looking to advance your career in cybersecurity, the CySA+ certification is definitely worth considering.

CompTIA CS0-003 (CompTIA Cybersecurity Analyst (CySA+) Certification) is a widely recognized certification exam for IT professionals who want to specialize in cybersecurity. CS0-003 Exam covers a range of topics related to threat detection, incident response, security analytics, and vulnerability management, and is designed to validate a candidate's ability to perform real-world cybersecurity tasks. CompTIA Cybersecurity Analyst (CySA+) Certification Exam certification is recognized globally and is a requirement for many cybersecurity positions in both the public and private sectors.

## CompTIA Cybersecurity Analyst (CySA+) Certification Exam Sample Questions (Q124-Q129):

### NEW QUESTION # 124

Which of the following security operations tasks are ideal for automation?

- **A. Email header analysis:** Check the email header for a phishing confidence metric greater than or equal to five Add the domain of sender to the block list Move the email to quarantine
- **B. Security application user errors:**  
Search the error logs for signs of users having trouble with the security application Look up the user's phone number Call the user to help with any questions about using the application
- **C. Firewall IoC block actions:**  
Examine the firewall logs for IoCs from the most recently published zero-day exploit Take mitigating actions in the firewall to block the behavior found in the logs Follow up on any false positives that were caused by the block rules
- **D. Suspicious file analysis:**  
Look for suspicious-looking graphics in a folder.  
Create subfolders in the original folder based on category of graphics found.  
Move the suspicious graphics to the appropriate subfolder

**Answer: A**

Explanation:

Email header analysis is one of the security operations tasks that are ideal for automation. Email header analysis involves checking the email header for various indicators of phishing or spamming attempts, such as sender address spoofing, mismatched domains, suspicious subject lines, or phishing confidence metrics. Email header analysis can be automated using tools or scripts that can parse and analyze email headers and take appropriate actions based on predefined rules or thresholds

### NEW QUESTION # 125

Which of the following is MOST dangerous to the client environment during a vulnerability assessment penetration test?

- **A. The testing is outside the contractual scope**
- B. There is a shorter period of time to assess the environment
- C. No status reports are included with the assessment.
- D. There is a longer period of time to assess the environment.

**Answer: A**

Explanation:

The point is that scans outside the scope can accidentally break it. That's dangerous to the customer's environment.

### NEW QUESTION # 126

A cybersecurity analyst notices unusual network scanning activity coming from a country that the company does not do business with. Which of the following is the best mitigation technique?

- **A. Geoblock the offending source country**
- B. Perform a historical trend analysis and look for similar scanning activity.
- C. Block the IP range of the scans at the network firewall.
- D. Block the specific IP address of the scans at the network firewall

**Answer: A**

Explanation:

Geoblocking is the best mitigation technique for unusual network scanning activity coming from a country that the company does not do business with, as it can prevent any potential attacks or data breaches from that country. Geoblocking is the practice of restricting access to websites or services based on geographic location, usually by blocking IP addresses associated with a certain country or region. Geoblocking can help reduce the overall attack surface and protect against malicious actors who may be trying to exploit vulnerabilities or steal information. The other options are not as effective as geoblocking, as they may not block all the possible sources of the scanning activity, or they may not address the root cause of the problem. ### NEW QUESTION # 127

Which of the following entities must receive reports in a timely fashion according to data breach notification laws related to personally identifiable information?

- **A. Regulators and affected customers**
- B. Computer emergency response teams and industry associations
- C. Service providers and business associates
- D. Law enforcement and the media

**Answer: A**

Explanation:

Data breach notification laws for personally identifiable information (PII) generally require organizations to provide timely notification to (1) regulatory authorities (regulators/data protection authorities) and (2) affected individuals (customers/data subjects), within legally mandated timeframes.

The Secbay Press CySA+ CS0-003 guide explicitly describes this requirement in multiple places:

\* Regulatory reporting + notifying affected individuals: Exact extract (Secbay Press): "Reporting the incident to regulatory authorities and notifying affected individuals in accordance with... privacy laws..."

\* Timeliness is required by law: Exact extract (Secbay Press): "Timeliness of Reporting: Adhering to stipulated timeframes for reporting incidents..."

\* Customers/affected individuals must be notified within the legally mandated timeframe: Exact extract (Secbay Press): "Sending notifications to customers within the legally mandated timeframe after confirming a data breach." These extracts directly support Option D: Regulators and affected customers .

Why the other options are incorrect

\* A (Service providers and business associates): Those relationships may have contractual notification requirements, but breach notification laws for PII focus on regulators and affected individuals.

\* B (Law enforcement and the media): These may be involved depending on incident type /requirements, but they are not universally required recipients under PII breach notification laws.

\* C (CERTs and industry associations): These are optional coordination entities, not mandated recipients for PII breach notification laws.

References (CompTIA CySA+ CS0-003 documents / study guides used):

\* Secbay Press, CompTIA CySA+ Exam Prep Guide (CS0-003) : notify regulatory authorities and affected individuals; timeliness requirements; legally mandated timeframe for customer notifications

### NEW QUESTION # 128

A zero-day command injection vulnerability was published. A security administrator is analyzing the following logs for evidence of adversaries attempting to exploit the vulnerability:

Log entry #	Message
Log entry 1	comptia.org/S{@java.lang.Runtime@getRuntime().exec("nslookup example.com")}/
Log entry 2	<script type="text/javascript">var test='../index.php?cookie_data='+escape(document.cookie);</script>
Log entry 3	example.com/butler.php?id=1 and nullif (1337,1337)
Log entry 4	requestObj = ... {scopes: ["Mail.ReadWrite", "Mail.send", "Files.ReadWrite.All"]}

Which of the following log entries provides evidence of the attempted exploit?

- A. Log entry 1
- **B. Log entry 4**
- C. Log entry 3
- D. Log entry 2

**Answer: B**

Explanation:

Log entry 4 shows an attempt to exploit the zero-day command injection vulnerability by appending a malicious command (;cat /etc/passwd) to the end of a legitimate request (/cgi-bin/index.cgi?name=John). This command would try to read the contents of the /etc/passwd file, which contains user account information, and could lead to further compromise of the system. The other log entries do not show any signs of command injection, as they do not contain any special characters or commands that could alter the intended behavior of the application.
