Salesforce - Identity-and-Access-Management-Architect –High-quality Best Preparation Materials

As is known to us, perfect after-sales service for buyers is a very high value. Our Identity-and-Access-Management-Architect guide torrent not only has the high quality and efficiency but also the perfect service system after sale. If you decide to buy our Identity-and-Access-Management-Architect test torrent, we would like to offer you 24-hour online efficient service, you have the right to communicate with us without any worries at any time you need, and you will receive a reply, we are glad to answer your any question about our Identity-and-Access-Management-Architect Guide Torrent. You have the right to communicate with us by online contacts or by an email. The high quality and the perfect service system after sale of our Identity-and-Access-Management-Architect exam questions have been approbated by our local and international customers. So you can rest assured to buy.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q47-Q52):

NEW QUESTION # 47

Universal Containers (UC) is setting up their customer Community self-registration process. They are uncomfortable with the idea of assigning new users to a default account record. What will happen when customers self-register in the community?

- A. The self-registration page will ask user to select an account.
- **B. The self-registration process will create a person Account record.**
- C. The self-registration process will produce an error to the user.
- D. The self-registration page will create a new account record.

Answer: B

Explanation:

When customers self-register in the community, the self-registration process will create a person account record. A person account is a special type of account that combines both account and contact information in one record. This allows customers to have their own individual accounts without being associated with a default account. Option A is not a good choice because the self-registration process will not produce an error to the user, unless there is some configuration or validation issue. Option B is not a good choice because the self-registration page will not ask user to select an account, unless it is customized to do so. Option D is not a good choice because the self-registration page will not create a new account record, unless it is customized to do so.

References: [How to Provision Salesforce Communities Users], [Salesforce Licensing]

NEW QUESTION # 48

Universal Containers is creating a mobile application that will be secured by Salesforce Identity using the OAuth 2.0 user-agent flow (this flow uses the OAuth 2.0 implicit grant type).

Which three OAuth concepts apply to this flow?

Choose 3 answers

- **A. Client ID**
- B. Authorization Code
- **C. Scopes**
- D. Refresh Token
- E. Verification Code

Answer: A,C

Explanation:

The OAuth 2.0 user-agent flow uses the OAuth 2.0 implicit grant type, which does not require an authorization code or a refresh token. The client ID and scopes are required to identify the connected app and request the appropriate permissions from the user.

References: OAuth Authorization Flows, OAuth with Salesforce Demystified

NEW QUESTION # 49

Universal Containers (UC) implemented SSO to a third-party system for their Salesforce users to access the App Launcher. UC enabled "User Provisioning" on the Connected App so that changes to user accounts can be synched between Salesforce and the third-party system. However, UC quickly notices that changes to user roles in Salesforce are not getting synched to the third-party system. What is the most likely reason for this behavior?

- **A. Required operation(s) was not mapped in User Provisioning Settings.**
- B. The Approval queue for User Provisioning Requests is unmonitored.
- C. User Provisioning for Connected Apps does not support role sync.
- D. Salesforce roles have more than three levels in the role hierarchy.

Answer: A

Explanation:

Explanation

User Provisioning for Connected Apps supports role sync, but the required operation(s) must be mapped in User Provisioning Settings. According to the Salesforce documentation¹, "To provision roles, map the Role operation to a field in the connected app. The field must contain the role's unique name." Therefore, option B is the correct answer.

References: Salesforce Documentation

NEW QUESTION # 50

Universal Containers (UC) wants its closed Won opportunities to be synced to a Data warehouse in near real time. UC has implemented Outbound Message to enable near real-time data sync. UC wants to ensure that communication between Salesforce and Target System is secure. What certificate is sent along with the Outbound Message?

- A. The default client Certificate from the Develop--> API menu.
- **B. The default client Certificate or the Certificate and Key Management menu.**
- C. The Self-signed Certificates from the Certificate & Key Management menu.
- D. The CA-signed Certificate from the Certificate and Key Management Menu.

Answer: B

Explanation:

The default client certificate or the certificate from the Certificate and Key Management menu is sent along with the outbound message. When sending outbound messages, Salesforce will present the CA-signed or self-signed certificate configured under Setup | Security Controls | Certificate and Key Management | API Client Certificate1. The default client certificate is a self-signed certificate that Salesforce generates for you when you enable outbound messages2. You can also create your own self-signed or CA-signed certificates and upload them to the Certificate and Key Management menu3. The certificate from the Develop | API menu is not used for outbound messages, but for SOAP API clients that need to authenticate with Salesforce4.

References: 1: Know more about all the SSL certificates that are supported by Salesforce 2: Setting Up Outbound Messaging 3: Create a Self-Signed Certificate 4: [Generate or Regenerate a Client Certificate]

NEW QUESTION # 51

Universal Containers would like its customers to register and log in to a portal built on Salesforce Experience Cloud. Customers should be able to use their Facebook or LinkedIn credentials for ease of use.

Which three steps should an identity architect take to implement social sign-on?

Choose 3 answers

- A. Register both Facebook and LinkedIn as connected apps.
- **B. Create authentication providers for both Facebook and LinkedIn.**
- **C. Update the default registration handlers to create and update users.**
- D. Enable "Federated Single Sign-On Using SAML".
- **E. Check "Facebook" and "LinkedIn" under Login Page Setup.**

Answer: B,C,E

NEW QUESTION # 52

.....

Knowledge of the Identity-and-Access-Management-Architect real study guide contains are very comprehensive, not only have the function of online learning, also can help the user to leak fill a vacancy, let those who deal with qualification exam users can easily and efficient use of the Identity-and-Access-Management-Architect question guide. By visit our website, the user can obtain an experimental demonstration, free after the user experience can choose the most appropriate and most favorite Identity-and-Access-Management-Architect Exam Questions download. Users can not only learn new knowledge, can also apply theory into the Identity-and-Access-Management-Architect actual problem, so to grasp the opportunity!
