- A. Frame
- B. Widget
- C. Z-index
- D. Player

- E. Canvas

Answer: A,B,E

NEW QUESTION # 27

In the Editor, a Shuttle has a full green circle next to it when looking at the Production environment.
How would you describe the status of this Shuttle?

- A. Published to Production
- B. Archived in Production
- C. Published to Production but has been modified
- D. Draft mode in Test

Answer: A

NEW QUESTION # 28

Which option describes a Smart Walk-Thru Goal?

- A. Goals log when the Smart Walk-Thru was initiated by another type of WalkMe content (like a Launcher).
- B. Goals are used to determine if a user interacted with each individual step of a Smart Walk-Thru.
- C. Goals track how effective a Smart Walk-Thru is with helping users complete a process or action on the site.
- D. Goals track how many users see the last balloon in a Smart Walk-Thru.

Answer: C

NEW QUESTION # 29

You're getting ready to plan your next build.
What data/section in Insights can you use to help you determine which content your end users may need you to build next?

- A. Text and Multilanguage
- B. What Users Are Searching For
- C. Activity Log
- D. Total Menu Opens

Answer: B

NEW QUESTION # 30

Your product team has informed you that there is a UI element on the website that has no purpose, is causing user confusion, and they need it removed. They also mentioned that they don't have enough development resources to remove it for at least a few weeks. What WalkMe solution can you build to help resolve this issue?

- A. Build a Resource to a support article on the UI element.
- B. Build a Launcher that will cover up the UI element and make it invisible.
- C. Build a mandatory field Launcher and place it on top of the UI element.
- D. Build a Mini Menu and place it next to the button.

Answer: B

Explanation:
WalkMe Launchers are on-screen elements that can be configured to trigger actions or content, such as Smart Walk-Thrus, Resources, or Shuttles. A key feature of Launchers is their ability to be customized for visibility and positioning, including the option to make them "invisible" by adjusting transparency settings. This makes them ideal for temporarily covering a problematic UI element without requiring code changes to the underlying website. By placing an invisible Launcher over the unwanted UI element, the Builder can block user interaction with it, effectively "hiding" it until developers can remove it.
The other options are less effective for this use case:
* A mandatory field Launcher is not a standard WalkMe feature; Launchers are not tied to form validation or mandatory fields.

* A Resource to a support articleprovides information but doesn't prevent users from interacting with the confusing UI element.
* A Mini Menuis a navigational tool for accessing content and cannot cover or hide a UI element.
Extract from Official WalkMe Documentation:
According to the WalkMe Editor User Guide (SAP WalkMe Digital Adoption Consultant Study Guide, Section 2.3: Launchers):
"Launchers can be customized to be fully transparent using the ghost icon in the WalkMe Editor, allowing them to overlay and block interaction with specific UI elements without being visible to the end user. This is useful for temporarily disabling problematic elements." The courseAdvancing Your Skills in Building WalkMe Solutionsnotes:
"In scenarios where a UI element causes confusion and cannot be removed immediately, an invisible Launcher can be placed over the element to prevent user interaction, serving as a temporary workaround." Option D is the correct solution, as it directly addresses the need to make the UI element inaccessible without requiring development resources.
