## GH-900 Dumps Collection, Original GH-900 Questions

For candidates who are going to buy GH-900 study materials online, they may care much about the private information. We respect the privacy of you, and we can ensure you that if you GH-900 study materials from us, your personal information such as your name and email address will be protected well. Once the order finishes, your information will be concealed. In addition, GH-900 Exam Materials are high quality, since we have a professional team to check the questions and answers. Online and offline chat service stuff is available, if you have any questions about GH-900 study materials, don't hesitate to contact us.

### Microsoft GH-900 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• <b>Benefits of the GitHub Community:</b> This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• <b>Privacy, Security, and Administration:</b> This domain measures skills of Security Administrators and Organization Managers in securing and administering GitHub environments. It covers ensuring repository security through branch protection rules, using security tools like Dependabot, managing access and permissions at repository and organization levels, creating and managing organizations, setting up organization-level security, and overseeing teams and members.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>Introduction to Git and GitHub:</b> This section of the exam measures skills of Junior Developers and Platform Support Specialists and covers the basic understanding of Git and GitHub. It explains what Git is and why it is used, the fundamental Git workflow, and concepts related to repositories including their local and remote distinctions. Candidates learn essential Git commands such as initializing and cloning repositories, adding and committing changes, pushing and pulling updates, and branching and merging. It also covers navigating GitHub by creating accounts, managing repositories, understanding its interface, and working with issues and pull requests.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Working with GitHub Repositories:</b> This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.</li> </ul>

## Microsoft GitHub Foundations Sample Questions (Q76-Q81):

### NEW QUESTION # 76

What does a CODEOWNERS file do in a repository?

- A. Restricts who can edit specific files
- B. Requires peer code review for code changes
- C. Defines access permissions for the repository
- **D. Sets the reviewers for pull requests automatically**

**Answer: D**

Explanation:

The CODEOWNERS file in a GitHub repository is used to define individuals or teams that are responsible for specific parts of the codebase. When changes are made to files or directories that match the patterns specified in the CODEOWNERS file, GitHub automatically requests reviews from the listed code owners.

\* Setting Reviewers Automatically:

\* Option D is correct because the primary purpose of a CODEOWNERS file is to automatically set reviewers for pull requests that affect the specified files or directories. This ensures that the appropriate team members are notified and review the changes before they are merged.

\* Incorrect Options:

\* Option A is incorrect because the CODEOWNERS file does not restrict who can edit specific files; it only influences who is required to review changes.

\* Option B is partially related but not fully accurate because while CODEOWNERS does require certain reviews, it does not mandate peer review for all code changes.

\* Option C is incorrect because the CODEOWNERS file does not define access permissions for the repository; it deals with code review processes.

### NEW QUESTION # 77

An employee needs to find all issues within organization "Avocado " containing text " 404 error " and a " guacamole " label. Which of the following steps would be best to search for these results?

- A. Go to the Avocado organization settings. Select Repository defaults under Repository. Scroll to Repository labels and select the ' guacamole ' label.
- B. Go to " Avocado " organization. Select Issues under a repository. Filter issues with a " guacamole " label.
- C. Enter query org:Avocado label:guacamole " 404 error " in the search bar. Select " Issues " in the Filter by section.
- **D. Enter query org:Avocado is:issue label:guacamole " 404 error " in the search bar.**

**Answer: D**

Explanation:

GitHub provides a powerful search syntax to filter and find specific issues across repositories in an organization.

\* Search Query Syntax:

\* Option A is correct because the query `org:Avocado is:issue label:guacamole "404 error"` is the best way to search for all issues within the "Avocado" organization that contain the text "404 error" and are labeled with "guacamole". This query is precise and leverages GitHub's advanced search capabilities.

\* Incorrect Options:

\* Option B is incorrect because it requires manual filtering in a specific repository rather than searching across the entire organization.

\* Option C is incorrect because selecting "Issues" in the filter by section is redundant when using the query `is:issue`.

\* Option D is incorrect because accessing organization settings to look for repository labels is not relevant to searching for issues.

## NEW QUESTION # 78

What are the defining features of Git?

- **A. Distributed version control, open source software, and being designed for handling projects of any size with efficiency**
- B. Centralized version control, proprietary software, and being designed for small projects
- C. Low-cost local branching, convenient staging areas, multiple workflows, and being designed for managing small projects
- D. Sequential version control, cloud-based hosting service, and being designed for collaboration on large projects

**Answer: A**

Explanation:

Git is a widely-used version control system that has several defining features:

Distributed Version Control:

Git is a distributed version control system, meaning that every developer has a full copy of the entire repository, including its history, on their local machine. This enables greater flexibility, as work can be done offline and each user has access to the full project history.

Open Source Software:

Git is open-source, meaning its source code is freely available for use, modification, and distribution. This fosters a large community of users and contributors who continuously improve the software.

Efficiency with Large Projects:

Git is designed to handle projects of any size with speed and efficiency. It can manage large codebases and many contributors without significant performance degradation, making it suitable for everything from small personal projects to large, complex software systems.

## NEW QUESTION # 79

Which of the following is always true about the feature preview phases Alpha and Beta?

- A. Alpha features are documented.
- B. Beta features provide technical support.
- C. Alpha and Beta features offer Service Level Agreements (SLAs).
- **D. Alpha features are not available to the public.**

**Answer: D**

Explanation:

The terms Alpha and Beta are often used in software development to describe different stages of feature testing and release.

\* Alpha Features:

\* Option A is correct because Alpha features are typically in the early stages of development and are not available to the public. They are usually tested internally or by a limited audience.

\* Incorrect Options:

\* Option B is incorrect because Alpha features are often undocumented as they are in the early development phase.

\* Option C is incorrect because Alpha and Beta features usually do not offer Service Level Agreements (SLAs) due to their experimental nature.

\* Option D is incorrect because Beta features might offer limited support, but it is not guaranteed, especially compared to fully released features.

GitHub Docs: About Feature Previews

## NEW QUESTION # 80

Which of the following can be performed within GitHub Desktop?

- A. Adding and cloning repositories
- B. Integrating with office suite software
- C. Commenting on discussions
- D. Reviewing and approving pull requests
- E. Creating and managing issues

**Answer: A**

Explanation:

GitHub Desktop is a graphical interface that allows users to interact with GitHub repositories. It simplifies certain Git operations without the need for command-line usage.

GitHub Desktop Capabilities:

Option C is correct because GitHub Desktop allows users to add local repositories to their GitHub account, clone repositories from GitHub to their local machine, and manage repositories effectively.

Incorrect Options:

Option A is incorrect because GitHub Desktop does not support creating or managing issues directly; this is done through the GitHub web interface.

Option B is incorrect because reviewing and approving pull requests is also managed through the GitHub web interface.

Option D is incorrect because commenting on discussions is done on the GitHub platform, not through GitHub Desktop.

Option E is incorrect because GitHub Desktop does not integrate with office suite software.
