Valid Test Salesforce PDII Tips | PDII Reliable Exam Materials

Their updated Platform Developer II (PDII) practice test material includes the latest and real PDII questions that are very similar to those given in the actual Platform Developer II (PDII) exam. Additionally, the Platform Developer II (PDII) practice test software creates a realistic PDII exam environment for users, and it also helps you in your preparation for the actual Platform Developer II (PDII) test. Prep4away offers the latest PDII exam questions in multiple formats for convenience. These formats include Platform Developer II (PDII) PDF dumps, PDII Practice Test (web-based), and PDII Practice Exam Software (Desktop-Based).

Salesforce Platform Developer II Sample Questions (Q22-Q27):

NEW QUESTION # 22

A developer wants to create a Visualforce page that allows a user to search for a given account by Name. If the account is found, the account details should be populated on screen. If no account is found, an error message should be displayed to the user.

How can this be accomplished? (Choose two.)

- A. Use the `ApexPages.addMessage()` method to add the error message
- B. Use the `<apex:pageMessages>` tag to display the error message
- C. Use the `account.addError()` method to add the error message
- D. Use the `(apex: information)` tag to display the error message

Answer: A,B

NEW QUESTION # 23

Universal Containers implements a private sharing model for the Convention Attendee co custom object. As part of a new quality assurance effort, the company created an `Event_Reviewer_c` user lookup field on the object.

Management wants the event reviewer to automatically gain ReadWrite access to every record they are assigned to.

What is the best approach to ensure the assigned reviewer obtains Read/Write access to the record?

- A. Create a before insert trigger on the Convention Attendee custom object, and use Apex Sharing Reasons and Apex Managed Sharing.
- B. Create criteria-based sharing rules on the Convention Attendee custom object to share the records with the Event Reviewers,
- C. Create a criteria-based sharing rule on the Convention Attendee custom object to share the records with a group of Event Reviewers.
- **D. Create an after insert trigger on the Convention Attendee custom object, and use Apex Sharing Reasons and Apex Managed Sharing.**

Answer: D

Explanation:

Use Apex Managed Sharing with an after insert trigger. It allows dynamic record sharing based on user-defined criteria like the Event_Reviewer_c field. References: Apex Managed Sharing

NEW QUESTION # 24

A company uses a custom-built enterprise resource planning (ERP) system to handle order management. The company wants Sales Reps to know the status of orders so that if a customer calls to ask about their shipment, the Sales Rep can advise the customer about the order's status and tracking number if it is already shipped.

Which two methods can make this ERP order data visible in Salesforce? (Choose two.)

- **A. Use Salesforce Connect to view real-time Order data in the ERP system**
- B. Ensure real-time order data is in Salesforce using the Streaming API
- **C. Have the ERP system push the data into Salesforce using the SOAP API**
- D. Write a cron job in Salesforce to poll the ERP system for order updates

Answer: A,C

NEW QUESTION # 25

Which code snippet processes records in the most memory efficient manner, avoiding governor limits such as "Apex heap size too large"?

- A.
- B.
- **C.**
- D.

Answer: C

Explanation:

Option D, which uses the Database.query() method in combination with a for loop, is the most memory-efficient way to process records. This is known as the Query Locator pattern, which allows you to work with a large number of records by querying them in batches. This approach helps to avoid hitting the governor limit for "Apex heap size too large" as it processes one record at a time from the database without storing the entire result set in memory.

Apex Governor Limits

NEW QUESTION # 26

A developer is working with existing functionality that tracks how many times a stage has changed for an Opportunity. When the opportunity's stage is changed, a workflow rule is fired to increase the value of a field by one. The developer wrote an after trigger to create a child record when the field changes from 4 to 5.

A user changes the stage of an Opportunities and manually sets the count field to 4. The count field updates to 5, but the child record is not created.

What is the reason this is happening?

- A. After triggers fire before workflow rules.
- B. Trigger .new does not change after a field update.
- C. After triggers are not fired after field updates.
- D. Trigger .old does not contain the updated value of the count field.

Answer: D

NEW QUESTION # 27
