CompTIA Cloud+ (2025) Sample Questions (Q255-Q260):

NEW QUESTION # 255
Which of the following would allow a cloud engineer to flatten a deeply nested JSON log to improve readability for analysts?

- A. Kibana
- B. Elasticsearch
- C. Grafana
- D. Logstash

Answer: D

Explanation:
Logstash can be used to flatten a deeply nested JSON log, which would improve readability for analysts.
Logstash is a data processing pipeline that ingests data from various sources, transforms it, and then sends it to a "stash" like Elasticsearch. References: CompTIA Cloud+ Study Guide (Exam CV0-004) - Chapter on Cloud Data Management

NEW QUESTION # 256
Which of the following best explains the concept of migrating from on premises to the cloud?

- A. The creation of virtual instances in an external provider to transfer operations of selected servers into a new. remotely managed environment
- B. The configuration of a dedicated pipeline to transfer content to a remote location
- C. The extension of company IT infrastructure to a managed service provider
- D. The physical transportation, installation, and configuration of company IT equipment in a cloud services provider's facility

Answer: A

Explanation:
Migrating from on-premises to the cloud generally involves creating virtual instances in an external provider's environment and transferring the operations of selected servers to this new, remotely managed setup. This process allows organizations to leverage the cloud provider's resources and services.
The migration process and strategies are topics included in the Business Principles of Cloud Environments within the CompTIA Cloud+ curriculum.

NEW QUESTION # 257
Which of the following best describes a program in the context of project management?

- A. It is a consolidation of related projects with a common goal
- B. It is a group of unrelated projects within an organization
- C. It is used to represent the daily activities of multiple projects
- D. It provides the definition of a project workload

Answer: A

Explanation:
A program is a group of related projects managed in a coordinated way to achieve benefits not available if managed separately. This is different from a portfolio (broader grouping, not necessarily related) or daily activities (operational work).
Reference: CompTIA Project+ PK0-005 - Program vs. Project vs. Portfolio; CompTIA Cloud+ CV0-004 Cloud Architecture & Design domain.

NEW QUESTION # 258
A company recently experienced a ransomware attack. The recovery process was slow because the on-site backups were compromised and off-site backups were required. Which of the following features would enable a faster recovery if a ransomware attack would happen again?

- A. Replication
- B. Encryption

- C. Immutability
- D. Integrity

Answer: C

Explanation:
Immutability ensures that backup data cannot be modified, deleted, or encrypted by ransomware or malicious actors. If an attack occurs, the company can quickly restore clean, unaltered backups, significantly speeding up the recovery process. Implementing immutable backups prevents ransomware from compromising backup copies, reducing downtime and data loss.

NEW QUESTION # 259
A cloud engineer hardened the WAF for a company that operates exclusively in North America.
The engineer did not make changes to any ports, and all protected applications have continued to function as expected. Which of the following configuration changes did the engineer most likely apply?

- A. The engineer completed an upgrade from TLS version 1.1 to version 1.3.
- B. The engineer blocked all traffic originating outside the region.
- C. The engineer implemented MFA to access the WAF configurations.
- D. The engineer installed the latest security patches on the WAF.

Answer: B

Explanation:
Given that the WAF was hardened without changing any ports and all protected applications continued to function as expected, it is most likely that the engineer blocked all traffic originating outside of North America, which is the company's operating region.

NEW QUESTION # 260
