Practical F5CAB4 Question Dumps is Very Convenient for You - ITExamSimulator

ITExamSimulator has one of the most comprehensive and top-notch F5 F5CAB4 Exam Questions. We eliminated the filler and simplified the BIG-IP Administration Control Plane Administration preparation process so you can ace the F5 certification exam on your first try. Our F5 F5CAB4 Questions include real-world examples to help you learn the fundamentals of the subject not only for the F5 exam but also for your future job.

F5 BIG-IP Administration Control Plane Administration Sample Questions (Q15-Q20):

NEW QUESTION # 15

The BIG-IP Administrator suspects unauthorized SSH login attempts on the BIG-IP system. Which log file would contain details of these attempts? (Choose one answer)

- A. /var/log/audit
- B. /var/log/secure
- C. /var/log/ltn
- D. /var/log/messages

Answer: B

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents:

On BIG-IP systems, authentication and authorization events are logged in /var/log/secure. This includes:

Successful and failed SSH login attempts

Invalid user authentication attempts

PAM (Pluggable Authentication Module) authentication failures

Access denials related to secure services

Why the other options are incorrect:

/var/log/messages contains general system messages and service events, not detailed authentication failures.

/var/log/audit records administrative configuration changes (who changed what and when), not login attempts.

/var/log/ltn logs traffic-management (TMM) and application-related events.

Therefore, the correct log file for investigating unauthorized SSH login attempts is /var/log/secure.

NEW QUESTION # 16

In which of the following log files would log events pertaining to pool members being marked "UP" or "DOWN" by their Health Monitors be written? (Choose one answer)

- A. /var/log/audit
- B. /var/log/monitors
- C. /var/log/ltn
- D. /var/log/secure

Answer: C

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents:

On BIG-IP systems, Local Traffic Manager (LTM) is responsible for:

Pool and pool member management

Health monitor execution

Marking pool members UP or DOWN based on monitor results

Events related to health monitor status changes, including when pool members transition between UP and DOWN, are logged in /var/log/ltn.

Why the other options are incorrect:

/var/log/audit records administrative configuration changes, not runtime health status.

/var/log/secure logs authentication and authorization events.

/var/log/monitors is not a standard BIG-IP log file.

Therefore, the correct log file for pool member health monitor status events is /var/log/ltn.

NEW QUESTION # 17

A BIG-IP Administrator is setting up a new BIG-IP device. The network administrator reports that the interface has an incompatible media speed. The BIG-IP Administrator needs to change this setting manually. From which location should the BIG-IP Administrator perform this task?14

- A. In the Configuration Utility, Network > Interface17
- B. On the Front Console15
- C. In the TMOS Shell Command line16
- D. In the Configuration Utility, System > Configuration18

Answer: A

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration20 Control Plane Administration documents: Connectivity management involves ensuring that the physical layer matches the networking environment. Interface properties, including media speed, duplex settings, and MTU, are managed at the Control Plane level under the Network menu. To resolve a mismatch with an upstream switch, the administrator must navigate to Network > Interfaces to manually override auto-negotiation settings.

NEW QUESTION # 18

A BIG-IP Administrator makes a configuration change to a Virtual Server on the Standby device of an HA pair. The HA pair is currently configured with Auto-Sync Enabled. What effect will the change have on the HA pair configuration?

- A. The change will be undone when Auto-Sync propagates the config to the HA pair.
- B. The change will take effect when Auto-Sync propagates the config to the HA pair.
- C. The change will be propagated next time a configuration change is made on the Active device.
- D. The change will be undone next time a configuration change is made on the Active device.

Answer: B

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administratio24n Control Plane Administration documents: TMOS Device Service Cluste25ring (DSC) allows for configuration changes to be made on any device within a synchronization group. If Auto-Sync is enabled, the Control Plane detects the change on the Standby unit and automatically propagates (pushes) that updated

configuration to the other members of the HA pair

NEW QUESTION # 19

Which command will provide the BIG-IP Administrator with the current device HA status? (Choose one answer)

- A. show /sys failover
- B. show /cm failover-status
- C. list /cm failover

Answer: B

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents:

To determine the current failover (HA) status of a BIG-IP system using tmsh, F5 documentation explicitly states that the administrator should use the following command:

```
show /cm failover-status
```

This command displays:

The current failover state (active, standby, or offline)

Detailed failover status information

The operational HA condition of the device within a device group

According to F5 Knowledge Base Article K08452454, the documented procedure for checking failover status is:

Log in to the TMOS Shell (tmsh)

Run show /cm failover-status

Why the other options are incorrect:

A . list /cm failover shows configuration settings, not operational HA status.

B . show /sys failover is not the documented command for checking current failover status and does not align with F5's recommended procedure.

NEW QUESTION # 20
