### NEW QUESTION # 169

Why is refactoring done during test-driven development?

- A. to ensure that the previous uses of the objects are explained
- **B. to improve maintainability and readability**
- C. to ensure the duplication of essential code
- D. to enable larger objects and longer methods

**Answer: B**

### NEW QUESTION # 170

In python, which expression checks whether the script returns a success status code when the Requests library is used?

- **A. respons.status\_code== requests.codes.ok**
- B. response.status\_code != requests.codes.ok
- C. response.code== requests.codes.ok
- D. response.status\_code== requests.ok

**Answer: A**

### NEW QUESTION # 171

What are two roles of an artifact repository in a CI/CD pipeline? (Choose two.)

- **A. stores files needed and generated during the build process**
- B. allows for comparing and merging changes in the source code
- **C. provides traceability, search, and management of binary files**
- D. is required for CI/CD pipelines executed on a public cloud infrastructure
- E. is required for managing open source software

**Answer: A,C**

Explanation:

Artifact repositories play a crucial role in Continuous Integration/Continuous Deployment (CI/CD) pipelines by:

- \* Storing Build Artifacts: They store files needed during the build process, such as dependencies, and files generated during the build process, such as binaries.
- \* Providing Traceability: They offer traceability and versioning of binary files, which is essential for managing builds and releases.
- \* Search and Management: They allow developers to search and manage binary files efficiently, ensuring that the correct versions of dependencies are used.

### NEW QUESTION # 172

Refer to the exhibit.

□ A developer uses a REST API to retrieve information about wireless access points. The API returns an HTTP 403 error when making a GET request. Which ion resolves this Issue?

- A. Include a username/password request header.
- **B. Provide the developer with the correct user access rights.**
- C. Change the request HTTP method from GET to POST.
- D. Change the request timeout in the client software.

**Answer: B**

Explanation:

An HTTP 403 Forbidden error indicates that the server understands the request but refuses to authorize it. This often occurs when the user making the request does not have the necessary permissions to access the resource.

To resolve this issue:

- \* Correct User Access Rights: Ensure that the developer has the appropriate permissions to access the API endpoint. This typically involves verifying the user's roles and permissions within the system or application being accessed.
