New PDII Test Question - PDII Reliable Test Cost

Our company has always been following the trend of the PDII Certification. The content of our PDII practice materials is chosen so carefully that all the questions for the exam are contained. And our PDII study materials have three formats which help you to read, test and study anytime, anywhere. This means with our products you can prepare for exams efficiently. If you desire a Salesforce certification, our products are your best choice.

Salesforce Platform Developer II Sample Questions (Q117-Q122):

NEW QUESTION # 117

Which technique can run custom logic when a Lightning web component is loaded?

- A. Call `enqueueAction` and pass in the method to call.
- B. Use an `<aura:handler>` `init` event to call a function.
- **C. Use the `connectedCallback` { } method.**
- D. Use the `rendered` `hook` { } method.

Answer: C

Explanation:

The `connectedCallback()` lifecycle hook in Lightning Web Components (LWC) is used to perform logic after a component is inserted into the DOM, making it the ideal place to execute custom logic when the component is loaded. References: Lightning Web Components Developer Guide - Lifecycle Hooks

NEW QUESTION # 118

An org has an existing process, built using Process Builder, on Opportunity that sets a custom field, `CommissionBaseAmount__c`, when an Opportunity is edited and the Opportunity's Amount changes.

A developer recently deployed an Opportunity before update trigger that uses the `CommissionBaseAmount__c` and complex logic to calculate a value for a custom field, `CommissionAmount__c`, when an Opportunity stage changes to Closed/Won.

Users report that when they change the Opportunity to Closed/Won and also change the Amount during the same save, the `CommissionAmount__c` is incorrect.

Which action should the developer take to correct this problem?

- A. Call the trigger from the process.
- B. Call the process from the trigger.
- **C. A Replace the process with a Fast Field Update record-trigger flow.**

Answer: C

Explanation:

The issue described is likely due to the order of execution in Salesforce, where processes in Process Builder run after all before triggers. If the Opportunity's Amount is changed and the `CommissionBaseAmount__c` is set by Process Builder, the trigger that calculates `CommissionAmount__c` may not see the updated value if it operates before the process.

Replacing the process with a before-save record-triggered flow (formerly known as Fast Field Update) would ensure that `CommissionBaseAmount__c` is updated before the trigger runs. In a before-save flow, field updates occur before any Apex before update triggers fire, which means the trigger would have the updated value of `CommissionBaseAmount__c` to use in its calculation. Before-Save Record-Triggered Flows

NEW QUESTION # 119

Universal Containers wants to use an external Web Service provided by a third-party vendor to validate that shipping and billing addresses are correct. The current vendor uses basic password authentication, but Universal Containers might switch to a different vendor who uses OAuth.

What would allow Universal Containers to switch vendors without updating the code to handle authentication?

- A. Dynamic Endpoint
- **B. Named Credential**
- C. Custom Metadata
- D. Custom Setting (List)

Answer: B

NEW QUESTION # 120

Given the following code sample, what is a potential issue regarding bulk processing of records? trigger `accountTestTrggr` on Account (before insert, before update) Account acct = Trigger.new[0]; List <Contact> contacts = new List <Contact> ([select id, salutation, firstname, lastname, email from Contact where accountId

= :acct.Id]); for (Contact con: contacts) con.Title = 'Not Selected'; update contacts;

- A. The code will not execute because the list can be null and cause an exception.
- **B. The code will process one record that is called explicitly per execution.**
- **C. The code will have to be invoked multiple times to process all the records.**
- D. The code will not execute because the record in the list can be null and cause an exception.

Answer: B,C

NEW QUESTION # 121

A company requires an external system to be notified whenever an account is updated.

What LimitException could the following code trigger?

- A. System.CalloutException: Callout from triggers are currently not supported
- **B. System.LimitException: Too many future calls**
- C. System.LimitException: Too many SOQL queries
- D. System.LimitException: Too many callouts

Answer: B

NEW QUESTION # 122

.....

The exam time is coming, while you are not prepared well for PDII real test. Please do not be tense and worried, you can pass your PDII actual exam very simply and easily with PrepPDF PDII free pdf dumps. With the help of Salesforce PDII free pdf practice, you can not only get high score in your actual test, but also can get more technology knowledge and be more professional.
