You can take a look of these Sharing-and-Visibility-Architect exam dumps and take your time to decide.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q64-Q69):

NEW QUESTION # 64

Universal Container (UC) is in a legal dispute regarding several orders. UC has found out these records VP of Sales has asked to ensure this cannot happen in the future.

What approach would meet this requirement?

- A. Remove Order delete Permission from Profiles and Permission Sets
- B. Remove the Delete button from the Order Page Layout.
- C. Change the Record Type/Page Layout assignment for orders to be Read Only.
- D. Implement a Sharing Rule that changes access for order to Read.

Answer: A,C

Explanation:

Explanation

To prevent orders from being deleted in the future, a Salesforce Architect should recommend removing Order delete permission from profiles and permission sets, and changing the record type/page layout assignment for orders to be read only. Removing Order delete permission will prevent users from deleting any order records, regardless of their ownership or sharing. Changing the record type/page layout assignment will prevent users from editing any order fields, regardless of their field-level security. Implementing a sharing rule that changes access for order to read will not work, as it will only affect the record-level access, not the field-level access or the delete permission. Removing the Delete button from the order page layout will not work, as it will only affect the user interface, not the API or other ways of deleting records.

NEW QUESTION # 65

Universal Containers has requirement for the Architect to develop Apex Managed Sharing code for the custom Job object. The sharing settings for the Job object are set to Private.

When assigning access level for the record, which two lines of code will cause a DML exception on insert to the database?

Choose 2 answers

- A. `ObjectName.AccessLevel='Read'`
- B. `ObjectName.AccessLevel='All'`
- C. `ObjectName.AccessLevel='Edit'`
- D. `ObjectName.AccessLevel='None'`

Answer: B,D

Explanation:

Explanation

When assigning access level for a record using Apex Managed Sharing, you can only use 'Read' or 'Edit' values. Using 'All' or 'None' values will cause a DML exception on insert to the database.

NEW QUESTION # 66

Universal Containers has developed Apex code to manually create AccountShare records to grant specific users access to individual Accounts. What must the Architect do to ensure the AccountShare records are not deleted when the owner of the Account is changed?

- A. Create the share records with the Delete on Owner Change field set to false
- B. Create the share records and set the RowCause to a custom Apex Sharing Reason
- C. Create the share records and set the RowCause to Manual
- D. Create the share records in a class with the "Without Sharing" keyword

Answer: B

NEW QUESTION # 67

Universal Containers is planning to pilot a new application to a small set of Sales Reps.

What is the optimal way to grant inly this Sales Reps access to the new functionality, while hiding ..

- A. Create a permission set to grant access to the new functionality and hide the old functionality.
- B. Revoke access to legacy function in the Sales Rep profile and create a permission set for the ..
- C. Clone the Sales Rep profile, adjust settings, and assign the pilot users the new profile.

- D. Create new user records for the pilot user that they will use for the pilot.

Answer: C

Explanation:

Explanation

Cloning the Sales Rep profile, adjusting settings, and assigning the pilot users the new profile is the optimal way to grant only this Sales Reps access to the new functionality, while hiding it from other users. This way, the pilot users can have different permissions and access than the other Sales Reps who are not part of the pilot. Option B is incorrect, since revoking access to legacy function in the Sales Rep profile and creating a permission set for the new functionality would affect all Sales Reps, not just the pilot users. Option C is incorrect, since creating a permission set to grant access to the new functionality and hide the old functionality would not work, as permission sets cannot revoke access. Option D is incorrect, since creating new user records for the pilot user that they will use for the pilot would be unnecessary and inefficient.

NEW QUESTION # 68

Universal Containers (UC) uses a custom Lightning component with an Apex class to display shipment information (custom object, Private organization-wide default). UC sales managers are complaining about two important points: Shipment records that belong to their teams can be seen by other users. Shipment amount should be visible only by managers, but sales reps are able to view it. Which feature did the development team miss that is causing the problems?

- A. Use isShareable keyword in Apex classes to assure record visibility.
- B. Use runAs in test class to enforce user permissions and field level permissions.
- **C. Use isAccessible() method in Apex classes to check field accessibility.**

Answer: C

NEW QUESTION # 69

.....

Do you always feel that your gains are not proportional to your efforts without valid Sharing-and-Visibility-Architect study torrent? Do you feel that you always suffer from procrastination and cannot make full use of your sporadic time? If your answer is absolutely yes, then we would like to suggest you to try our Sharing-and-Visibility-Architect Training Materials, which are high quality and efficiency Sharing-and-Visibility-Architect test tools.
