

CTAL-TAE Vce Test Simulator | CTAL-TAE Training Online

What's more, part of that DumpsActual CTAL-TAE dumps now are free: <https://drive.google.com/open?id=16hs9xR31BVktWSxTiOSvW5tc-zkHx8ya>

Do you still worry about that you can't find an ideal job and earn low wage? You can try to obtain the CTAL-TAE certification and if you pass the CTAL-TAE exam you will have a high possibility to find a good job with a high income. If you buy our CTAL-TAE questions torrent you will pass the exam easily and successfully. Our CTAL-TAE Study Materials are compiled by experts and approved by professionals with experiences for many years. The high quality of our CTAL-TAE exam questions can help you pass the CTAL-TAE exam easily.

The ISQI CTAL-TAE practice exam will be a great help because you are left with little time to prepare for the ISQI CTAL-TAE certification exam which you cannot waste to make time for the ISQI CTAL-TAE Exam Questions. Get the ISQI CTAL-TAE certification by preparing through ISQI CTAL-TAE exam questions that will help you pass the ISQI CTAL-TAE exam.

Efficient CTAL-TAE Vce Test Simulator - Trusted & Pass-Sure CTAL-TAE Materials Free Download for ISQI CTAL-TAE Exam

The ISQI CTAL-TAE desktop practice exam software is customizable and suits the learning needs of candidates. A free demo of the ISTQB Certified Tester Advanced Level, Test Automation Engineering (CTAL-TAE) desktop software is available for sampling purposes. You can change CTAL-TAE Practice Exam's conditions such as duration and the number of questions. This simulator creates a ISQI CTAL-TAE real exam environment that helps you to get familiar with the original test.

ISQI ISTQB Certified Tester Advanced Level, Test Automation Engineering Sample Questions (Q30-Q35):

NEW QUESTION # 30

Which of the following attributes should NOT be included in a test execution report associated with a suite of automated tests?

- A. Summary of the test execution results
- B. Environment in which the tests have been executed
- C. System/Application under test and its version
- D. Defect clusters identified during test execution

Answer: A

NEW QUESTION # 31

Which of the following statements about the reuse of TAS artefacts is TRUE?

- A. Communications maintenance and improvements for reusing TAS artefacts are modify addressed during the design of the TAA
- B. Reusable TAS artifacts associated with the definition layer of the TAA include the adaptors to the SUT components and/or interfaces
- C. Reusable TAS artefacts can include components (or parts of components) associated with different layers of the TAA
- D. To enable reuse of TAS artefacts, a good design for reuse is built into the TAA and to further action are needed during the TAS lifecycle

Answer: C

NEW QUESTION # 32

You are executing the first test run of a test automation suite of 200 tests. All the relevant information related to the state of the SUT and to the automated test execution is stored in a small database. During the Automated test run you observe that the first 10 test pass, while an abnormal termination occurs when executing the 11th test. This test does not complete its execution and the overall execution of the suite is aborted. An immediate analysis of the abnormal termination is expected to be time consuming and you have been asked to produce a detailed report of the execution results for the first test run, as soon as possible.

What is the MOST important FIRST step to be taken immediately after the abnormal occurred when executing the 11th test?

- A. Take a backup of the database in its current state. So It can be analyzed later
- B. Return the database to a consistent state that allows subsequent test to run
- C. Re-run the test automation suite starting from the 1st test.
- D. Re-run the test automation suite starting from the 12th test

Answer: A

NEW QUESTION # 33

Which one of the following answers does NOT refer to an example of configuration item(s) that should be specified in development pipelines to identify a test environment (and its specific test data) associated with a web app under test on which to execute automated tests?

- A. The base URL of the test environment where the web app is deployed (i.e., the root address for accessing the web app)
- B. The connection string(s) to connect to the test database(s) within the test environment where the web app is deployed
- C. The URLs of web APIs/web services related to the web app's backend within the test environment where the app is deployed
- D. The number and type of automated tests to execute in the test environment where the web app is deployed

Answer: D

Explanation:

In TAE guidance, pipeline configuration items used to identify a specific test environment (and its associated test data) are those that uniquely define where the SUT is running and how automation connects to the deployed system and its dependent services and data stores. That typically includes the base URL of the deployed web application, endpoints/URLs for backend services used in that environment, and connection details to environment-specific databases (or references to secrets/credentials that enable those connections).

These items allow the same automated tests to be executed against different environments by switching configuration rather than changing test code. By contrast, "the number and type of automated tests to execute" is a test selection/execution configuration decision (what to run), not an environment identification configuration (where to run). You can run different subsets of tests in the

same environment without changing the environment identity. TAE distinguishes environment configuration (addresses, endpoints, credentials, data sources) from orchestration configuration (suite selection, tags, parallelism). Therefore, option A does not describe a configuration item that identifies the test environment and its specific test data.

NEW QUESTION # 34

A TAS uses a commercial test automation tool and the default logs generated by the inconsistent formats such as different types of messages (pass/fail steps, screenshots, warnings, etc.) To solve this issue some custom logging functions have been created from the test scripts, making it possible to log the different types of messages with the same format. However, this may cause a problem due to excessive size of the logs which can make it difficult to find the required information. Assume that all the default logs will be disabled when running the automated tests and that some tests will not generate excessively sized logs. Which of the following represents the BEST suggestion for implementing the custom logging functions?

- A. Implement the custom logging functions to support different levels of tracing
- B. Implement the custom logging functions without saving timestamps
- C. Implement the custom logging functions without saving stack traces
- D. Implement the custom logging functions to redirect the logs to multiple files

Answer: A

NEW QUESTION # 35
